Attachment 1 to Tender Form

COVENANT OF INTEGRITY

To: D.O.O. "Vodovod i kanalizacija" Danilovgrad

"We declare and covenant that neither we nor anyone, including any of our directors, employees, agents, joint venture partners, consultants or sub-contractors, where these exist, acting on our behalf with due authority or with our knowledge or consent, or facilitated by us, has engaged, or will engage, in any Prohibited Practise (as defined below) in connection with the tendering process or in the execution or supply of any works, goods or services for **DANILOVGRAD MUNICIPAL INFRASTRUCTURE-CONSTRUCTION OF WASTEWATER PLANT** (the "Contract") and covenant to so inform you if any instance of any such Prohibited Practise shall come to the attention of any person in our organization having responsibility for ensuring compliance with this Covenant.

We shall, for the duration of the tender process and, if we are successful in our tender, for the duration of the Contract, appoint and maintain in office an officer, who shall be a person reasonably satisfactory to you and to whom you shall have full and immediate access, having the duty, and the necessary powers, to ensure compliance with this Covenant.

We declare and covenant that, except for the matters disclosed in this Covenant of Integrity:

i. We, our subsidiaries and affiliates, and all of our directors, employees, agents or joint venture partners, where these exist, have not been convicted in any court of any offence involving a Prohibited Practice in connection with any tendering process or provision of works, goods or services during the ten years immediately preceding the date of this Covenant:
ii. None of our directors, employees, agents or a representatives of a joint venture partner, where these exist, has been dismissed or has resigned from any employment on the grounds of being implicated in any Prohibited Practise:
iii. We, our subsidiaries and affiliates and our directors, employees, agents or joint venture partners, where these exist, are not prohibited from participation in a tendering procedure on the grounds of having been found by the final judgement of a judicial process or a finding by the enforcement (or similar) mechanism of another international organisation to have engaged in a Prohibited Practice:
iv. We, our subsidiaries and affiliates, as well as any subcontractors, or suppliers or affiliates of the subcontracts or supplier are not subject to any sanction imposed by resolution of the United Nations Security Council.

For the purpose of this Covenant, the terms set forth below define Prohibited Practises as:

i) *"corrupt practice" which means the offering, giving, receiving or soliciting, directly or indirectly, of anything of value to influence improperly the actions of another party;*
ii) *"fraudulent practise" which means any act or omission, including a misrepresentation, that kwowingly or recklessly misleads, or attemps to mislead, a party to obtain a financial or other benefit or to avoid an obligation;*
iii) *"coercive practice" which means impairing or harming, or threatening to impair or harm, directly or indirectly, any party or the property of the party to influence improperly the actions of a part;and,*
iv) *"collusive practice" which means an arrangement between two or more parties designed to achieve an improper purpose, including influencing improperly the actions of another party*
v) *"theft" which means theft which means the misappropriation of property belonging to another party*
vi) *"misuse of the Bank's resources" means improper use of the Bank's resources, committed either intentionally or through reckless disregard;and,*
vii) *"obstructive practise" which means (i) destroying, falsifying, altering or concealing of evidence material to a Bank investigation, which impedes the Bank's investigation; (ii) making false statements to investigators in order to materially impede a Bank investigation*

GEORGIOS KARKANIAS
PRESIDENT

03/10/18

into allegations of a Prohibited Practise; (iii) failing to comply with requests to provide information, documents or records in connection with a Bank investigation; (iv) threatening, harassing or intimidating any party to prevent it from disclosing its knowledge of matters relevant to a Bank investigation or from pursuing the investigation; or (v) materially impeding the exercise of the Bank's contractual rights of audit or inspection or access to information.

Following the submission of our tender, we grant the project financier, the European Bank for Reconstruction and Development (EBRD) and/or persons appointed by them, the right of inspection of our, and any proposed subcontractors, accounts and records and permission to have any such accounts and records audited by auditors appointed by the Bank, if required by the Bank. We accept to preserve these records generally in accordance with applicable law but in any case for at least six years from the date of substantial performance of the Contrac.

We further declare that no affiliate of the Employer is participating in our tender in any capacity whatsoever.

No. C5HTVTZHF/09-06-2009 of the Republic of Germany, to whom it gives the special order and power of attorney, in its place, in its name (the company "KARKANIAS ENVIRONMENTAL TECHNOLOGY S.A.") and on its behalf acting either jointly or individually, to submit the file of the tender, before the tender Committee for the undertaking of the above work. Furthermore to authorize them to sign and submit any relative document during the whole tender. The above representative of the company "KARKANIAS ENVIRONMENTAL TECHNOLOGY S.A.", with the capacity she appears in the present act, she also declared responsibly and according to the provisions of the L. 1599/1986 that the residence declared and mentioned in the beginning of the present and the company's seat represented is the real, legal and true, and the company has not been dissolved or placed under bankruptcy or liquidation. The person who appeared, with her capacity in the present, declares that she approves and recognizes from now, all the actions of the above representatives, which refer to the above orders, as legal, valid, strong and unassailable and legally binding the company represented by them and that this power of attorney is valid until revoked and its revocation is legally notified. In witness whereof this power of attorney was compiled, in two (2) leaves. A megarosimo stamp (1,00) euro was affixed in the original and (2,00) euros for the copy. For the rights of the present, as well for the rights of issuing one copy, (36,00) euros were collected. On the collected rights, VAT was collected, euros (8,64). I read this power of attorney loudly for the representative of the principal to hear it, who certified its whole content and singed it, as well as myself the notary, as provided by the law.

THE PRINCIPAL'S REPRESENTATIVE THE NOTARY

TOPICS OF THE AGENDA

TOPIC: Conversion of the company to a Societe Anonyme, in accordance with the provisions of the L.2166/1993.

The Chairman of the Assembly and manager of the company, Mr. Apostolos Karkanias, took the seat and recommended the conversion of the limited liability company to a societe anonyme in accordance with the abilities provided by the provisions of L. 2166/19 93, as currently in effect. This conversion is deemed favorable to the development and expansion of the company's businesses and its satisfactory course in the future.

The attending shareholders held exhaustive discussions, during which there was analysis of all issues, formalities provisioned by articles 1-5 of the L.2166/1993 concerning the conversion of the company to a Societe Anonyme, including the analysis of the legal framework of L.2190/1920 which shall govern the company followings its conversion, as well as the perspectives and advantages for the company in the future emanating from such conversion to a Societe Anonyme. Following the above, the extraordinary General Assembly of the shareholders decided unanimously to convert the LTD to a Societe Anonyme, in accordance with the provisions of the L.2166/1993, as currently in effect. The conversion shall be performed on the basis of the Balance Sheet dated

renewable energy sources, management-financing of public utility works (Public sector.

Article 4

Duration

The duration of the company is set to fifty (50) years commencing upon registration with the Societes Anonymes' Register by the competent authority of the related administrative decision concerning the establishment of the company and the approval of its Statutes. The company's term expires on the respective date of the year 2051. Upon decision of the General Assembly of the shareholders and through amendment of the present article, it is possible to extend or reduce the company's duration.

CHAPTER TWO

ARTICLE 5

Share capital - Shares

1.- The share capital of the company is determined at two hundred million (200.000.000) drachmas or 586.940,57 Euros, and it is paid in full

as per the detailed provisions of article 35 and it is divided into two hundred thousand (200.000) shares of nominal value one thousand (1.000) drachmas or 2.93 Euros each.

2.- Under the reservation of par. 4 to this section.

During the first five-year period as of the foundation of the company, the board of directors has the right, following decision issued by a minimum majority of two thirds (2/3) of the entirety of its members: aa) to increase the share capital, in total or in part, through the issuance of new shares; such increase shall not exceed the initial share capital

ab) to issue a bond loan through the issuance of securities convertible to shares, for an amount that shall not exceed half the paid share capital. In this case there shall be application of the provisions of paragraphs 2 and 3 of article 3a of C.L. 2190/20 as in effect.

b) The above authorities may be assigned to the board of directors through a decision of the General Assembly subject to the publication formalities provisioned by article 7b of C.L. 2190/20 as in effect. In this case, the share capital may be increased up to the capital amount already paid on the date the board of directors was provided with such authority, while the amount of the bond loan shall not exceed half the paid share capital on the same date.

03/12/18

c) The above authorities of the board of directors may be renewed by the general assembly for a time period not exceeding five years, for each renewal and with their validity commencing following expiration of such five-year period. This decision of the general assembly is subject to the publication formalities provisioned by article 7b of C.L. 2190/20.

3.- Under the reservation of par. 4 of this article, the General Assembly within the first five year period since foundation of the company, has the right through a decision - requiring the majority and quorum stipulated by ARTICLE 14 herein- to increase the share capital, in total or in part, through the issuance of shares up to five times the initially paid share capital.

4.- If the company reserves exceed a quarter (1/4) of the paid share capital, then a decision of the General assembly under the quorum and majority stipulated in article 15 herein is always required, followed by an amendment of the related article.

5.- Any capital increase decided as per par. 2 and 3 of this article shall not constitute an amendment to the Statutes.

6.- The authority of the BoD to increase share capital as per par. 2 of this article may be exercised concurrently to the authority of the General Assembly as per par. 3 herein.

Article 6

1.-The company shares are registered and reserved and shall only be transferred as defined below, with the concurrent opinion of the Board of Directors, while they shall be signed by the Chairman of the Board of Directors and a member appointed by the latter and shall further have the ability to be converted to common stocks and vice versa, through a decision of the General Assembly in accordance with article 14 herein and amendment of the present article.

In the event that any of the shareholders wishes to transfer part or the totality of the shares owned, if permitted by the law, then such shareholder is responsible to address primarily to the other shareholders and, if and only if no one of them is interested to purchase them, the shareholder shall have the right to transfer them to a third party. The transfer price of each share, in case of dispute between the transferor and the transferee shareholder, shall be determined by the President of the Court of First Instance of Larisa, as per the injunction proceedings and such decision shall not be subject to any appeal.

CHAPTER THREE

SHAREHOLDERS

ARTICLE 7

Share rights

1.- The shareholders exercise their rights related to company management, solely through their participation at the General Assembly.

2.- Each share provides the right of one vote at the General Assembly.

3.- The decision of the competent body of the company to increase the share capital, or to issue a bond loan must state at least the amount of capital increase, or the amount of the loan, the method of coverage of such amounts, the number and kind of shares or bonds to be issued, their nominal value and the disposition value thereof. In any case of Share capital increase, not performed through contribution in kind, and issuance of bonds convertible to shares for the entirety of the new capital and bond loan, there shall be provision of option right to the shareholders of the company at such time, in accordance with their participation to the capital. After the lapse of the deadline for the performance of option rights, defined by the company body deciding the capital increase - such period being not less than a month - the shares not assumed by the existing shareholders shall be freely availed by the Board of Directors.

GEORGIOS KARKANIAS
PRESIDENT

03/12/18

In the event that the corporate body that decided the share capital increase, omitted to set a deadline for the expansion thereof, this shall be defined by the Board of Directors within the Deadline provisioned by article 11 of C.L.2190/20. The invitation to exercise the option right, which must also reference the deadline in which

such right is to be exercised, shall be published in the Government Gazette (SAs -Ltds Issue). The above invitation and deadline for the exercise of the option right may be omitted, as long as the General Assembly was attended by shareholders representing the entirety of the share capital and they were informed on the deadline set for the exercise of the option right, or stated their decision to exercise, or not such option right. Moreover, the publication of the invitation may be substituted by a registered letter, with return receipt, as long as the shares are registered in their entirety.

4.- Under the limitations of par. 6 and 7 of article 13 of C.L. 2190/1920 as in effect, the General Assembly may issue a decision in accordance with the provisions of articles 29 par. 3 and 4 and 31 par. 2 of C.L. 2190/20 as in effect, in order to limit or void the above option right.

c) The deadline for the payment of the capital increase shall not be less than one (1) month, or greater than four (4) months as of the date of issuance of the relevant decision by the competent company body, d) In case that share capital increase is followed by a respective amendment of the article of the statute concerning the capital, then the deadline for the payment of the capital increase commences on the date of issuance of the relevant decision by the General Assembly of the shareholders, and may be extended by the Board of Directors for an additional period of one (1) month.

e) Within twenty (20) days as of the expiration of the deadline stipulated in paragraphs 6a and 6b of this article, the company is responsible to submit to the Ministry of Commerce a copy of the relevant minutes of the assembly of the Board of Directors. In the event that such deadline lapses idle, in case of payment of initial capital there shall be application of the provisions of article 48 par. 1 point a of C.L. 2190/1920 and in case of capital increase there shall be revocation of the related decision approving the amendment of the statutes,

f) The payment in cash for the coverage of the initial share capital, or any eventual increases thereof, as well as the deposit of shares with the scope of future share capital increase, shall be performed necessarily through the deposit in an account registered to the company's name, kept with any Bank legally operating in Greece.

2.- In any case of application filed by shareholders representing one twentieth (1/20) of the paid share capital, the Chairman of the Assembly is responsible to postpone, once only, the issuance of decisions on all, or some of the topics of the regular or extraordinary General Assembly, and to appoint a date for the continuation of the session for the issuance of such decisions. Such new date shall be the one defined in the application of the shareholders, which, however, shall not be later than thirty (30) days since the adjournment date. The General Assembly following an adjournment shall be deemed a continuation of the previous session and shall not be subject to the shareholders invitation publication formalities, while it can be attended by new shareholders, always in compliance with the provisions of article 27 paragraph 2 and 28 of the Codified Law 2190/1920, as in effect.

3.- In case of application filed by shareholders representing one twentieth (1/20) of the paid share capital, which must be submitted to the company five (5) full days prior to the regular General Assembly, the Board of Directors is responsible:

a) To announce to the General Assembly the amounts paid by the company during the last two-year period to members of the Board of Directors, or to managers, or other company employees for any reason, as well as any other provision of the company to such persons, or any other agreement of the company established for any reason with the persons named above.

8.- The company shareholders representing one twentieth (1/20) of the paid share capital, have the right to request the audit of the company by the Uni-member Court of First Instance of the region in which the company is based, by means of voluntary jurisdiction proceedings. The audit is ordered if it is suspected that the actions accused violate the provisions of the law or of the company's Statute, of of the decisions of the General Assembly. The actions accused must have been performed at a time that does not exceed two years as of the year of approval of the annual

financial statements for the year in which such actions were performed.

9.- The company shareholders representing one third (1/3) of the paid share capital may request an audit by the aforementioned competent Court, if the entire course of company affairs leads to the assumption that the management of company affairs is not performed as per the prudent and wise management principles. This provision does not apply when the minority requesting the audit is represented at the Board of Directors of the company.

CHAPTER FOUR

GENERAL ASSEMBLY

Article 9

Authority of the General Assembly

1.- The General Assembly of the company shareholders is the supreme body and has the power to decide on all company affairs. Its lawful decisions are also binding to the absent or objecting shareholders.

2.- The General Assembly is the sole body competent to decide on the following:

a) Extension of the duration, disruption, conversion, reorganization, merger or dissolution of the company.

b) Amendment of Statute.

c) Increase or decrease of Share capital, with the exception of the case of par. 2 and 3 of article 5 herein, concerning increases decided by the Board of Directors or the General Assembly, as well as increases rendered mandatory by the provisions of other Laws.

d) Issuance of a bond loan, with the exception of the case of par. 6, article 5 herein.

e) Election of the members of the Board of Directors, with the exception of the cases defined in article 22 and 36 herein.

f) Selection of auditors.

g) Appointment of liquidators.

h) Profits allocation.

i) Approval of annual financial statements.

3.- The above par. 2 shall not include the absorption of the societe anonyme by another societe anonyme holding 100% of its shares, as per article 78 of C.L. 2190/20.

Article 10

Summoning of the General Assembly

1.- The General Assembly of the shareholders is summoned by the Board of Directors and sessions regularly at the company's headquarters, at least once a year, always within the first semester as of the expiration of its fiscal period and exceptionally at locations other than its headquarters, in accordance with the provisions of article 25 of C.L. 2190/20, as revised and in effect. The Board of Directors may summon an extraordinary General Assembly of the shareholders, when deemed expedient.

GEORGIOS KARKANIAS
PRESIDENT

03/12/18

The annual financial statements (balance sheet) are submitted for approval to the regular General Assembly and are followed by: a) An explanatory report of the Board of Directors stating all elements defined in article 43a and 3 point a and b of the C.L. 2190/1920, as amended by the Presidential Decree 409/86 and b) by the auditors' report. 2.- The balance sheet and the period statement of results, and the profit allocation table along with the relevant audit certificate, when the audit is performed by chartered auditors, are published twenty (20) days prior to the date of the Assembly, as per the provisions of the law and in the newspapers stated in article 43b par. 5 and 7b par. 1 point B of C.L. 2190/1920, as in effect.

3.- For the valid approval by the General Assembly, the annual financial statements must be audited by the company auditors and must be specifically certified by three different persons, namely:

a) the President of the Board of Directors.

b) the Vice President of the Board of Directors.

c) the Accountings Manager.

Article 31

Profits allocation

Under the reservation of the provisions of article 44 a of C.L. 2190/1920 added through article 37 of the Presidential Decree 409/1986 the allocation of the net profit of the company is performed as follows:

a) Initially there is allocation of the percentage required for the formation of the regular reserve, as provisioned by the law, that is at least one twentieth (1/20) of net profit is deducted towards this end. Known as it may be, in accordance with the law this deduction ceases to be mandatory when the reserve reaches an amount at least equal to one third (1/3) of the company's capital.

b) Then there is allocation of the percentage required for the payment of the first dividend, that is at least six per cent (6%) of the paid share capital and in accordance with article 4 5 of C.L. 2190/1920 in conjunction with the provisions of C.L. 148, 1967 of the Law Decree 34/1968 and L.876/1979.

c) The General assembly avails freely the remaining amount.

GEORGIOS KARKANIAS
PRESIDENT

03/12/18

1.- The company is terminated:

a) Upon lapse of its duration, unless there is prior decision of the General Assembly to extend its duration. b) through a decision of the General Assembly c) As soon as the company is declared bankrupt.

2.- The collection of all shares by a single person shall not constitute grounds for company dissolution.

3.- In case the total equity of the company, as defined in article 42c of C.L. 2190/1920, as amended by the Presidential Decree 409/1986 is reduced more than half the paid share capital, the Board of Directors is responsible to summon a General Assembly within a deadline of six (6) months as of the expiration of the period in order to decide whether to dissolve the company or to employ other measures.

Article 33

Liquidation

1.- With the exception of the case of bankruptcy, the company's dissolution is followed by liquidation. In the case of point a, par. 1 of article 32 herein, the Board of Directors shall assume the duties of the liquidator till the appointment of liquidators by the General Assembly. In the case of point b of the same paragraph above and of the same article, the General Assembly through the same decision also appoints the liquidators.

GEORGIOS KARKANIAS
PRESIDENT

03/12/18

The liquidators appointed by the General Assembly may be two to four in number, whether shareholders or not, and shall exercise all authorities of the Board of Directors related to the procedure and scope of the liquidation, as these may be limited by the General Assembly, through the decisions with which they liquidators are responsible to comply. The appointment of liquidator implies, ipso jure, the cessation of the authority of the members of the Board of Directors. 2.- The liquidators appointed by the General Assembly are responsible to draft and publish in the press and the societes anonymes and limited liability companies issue of the Government Gazette a balance sheet, a copy of which must be submitted to the Monitoring Authority of the competent Prefecture authority. Moreover, during the liquidation, they are responsible to prepare and publish in the press and the Government Gazette (SAs - Ltds Issue) a Balance sheet for the liquidation, in accordance with case m of article 7 a of C.L. 2190/1920 as added by article 7 of the Presidential Decree 409/1986. Moreover, the liquidators must conclude, without any delay the pending

company affairs, convert to cash the company assets, settle company debts and collect its receivables. Moreover, they can perform new acts, as long as these serve the liquidation and the company's interests. The liquidators may also sell the company's estate property, the corporate business in its entirety, or departments thereof, or single assets, however after the lapse of four (4) months from the company's dissolution, each shareholder or and creditor may request from the Uni-Member Court of First Instance at the region of the company's headquarters, which tries as per articles 739 and on of the Civil Proceedings Code, to determine the lowest selling price for estate, departments, parts, or the entirety of the company and such decision

INDUSTRIAL AREA OF LARISA

AUDIT REPORT

For the verification of the accountings value

of the assets of the Limited Liability Company

to be converted

"A. KARKANIAS LIMITED LIABILITY COMPANY"

on the basis of the conversion balance sheet dated 31.12.2000

I. GENERAL

1. Mandate and scope of the audit

Through the document dated 13.2.2001 of "A. KARKANIAS LIMITED LIABILITY COMPANY" to the Anonymous Auditing Firm "CHARTERED ACCOUNTANTS ASSOCIATION A.E.O.E.", I was assigned the audit of the accounts of the conversion balance sheet dated 31.12.2000, in order to verify the accountings value of the assets of the aforementioned limited liability company, in order for the latter to be converted to a Societe Anonyme, in accordance with the provisions of articles 1-5 of the L. 2166/1993.

Drs. 7,944,991

Drs. 193,459,684

It is noted that non-taxed profit of technical businesses reserves include reserves taxed according to article 7 of the L. 2579/1998 drs. 18,670,924.

23. Suppliers

Balance on 31.12.2000 Drs. 43,119,355

The above amount of 43.119.355 drs is analyzed, per supplier, on pages 57-61 of the Inventory and Balance Sheets book and concerns the unsettled liabilities of the company on 31.12.2000 to:

- domestic suppliers	Drs.	35,868,322
- foreign suppliers in Foreign Currency (F.C.) (Lits 41.070.000)	Drs.	7,251,033
	Drs.	43,119,355

It is noted that there has not been valuation of liabilities in Lits on 31.12.2000, on the basis of the official F.C. price, given that the exchange differences arising per supplier were insignificant.

24. Bills payable

GEORGIOS KARKANIAS
PRESIDENT

03/12/18

The above amount refers to previous operating periods and as stated, verbally, there are no current liabilities and thus it must be settled through transfer to results.

25. Cheques payable

Balance on 31.12.2000	Drs.	75,871,434

This concerns seventy three (73) payable cheques and as it arises from their analysis on pages 62-63 of the Inventory and Balance Sheets book they expire during the period 29/12/2000 to 12/5/2001.

26. Banks, short term liability accounts

Balance on 31.12.2000	Drs.	15,137,875

The above amount concerns short term bank liabilities appearing on pages 61-62 of the Inventory and Balance Sheets book as follows:

- Loan account with the Bank of Cyprus, account no. 1097359 in Drs.	Drs.	57,407
- Loan in EUROS from Ergasias Bank, account no. 017/60904-33100/19 €44256,69	Drs.	15,080,468
	Drs.	15,137,875

27. Tax-duties liabilities

Balance on 31.12.2000	Drs.	56,387,889

The above amount of 56.387.889 drs. is analyzed on pages 63-65 of the Inventory and Balance Sheets book and concerns liabilities related to the following:

The Company meets all requirements provisioned by L. 2166/1993 for its conversion to a Societe Anonyme.

That is:

a) It maintains C class books as per the Books and Records Code (Presidential Decree 186/1992.

b) Has established Balance sheets corresponding to more than one operating periods.

c) The Share Capital of the Societe Anonyme arising from the conversion exceeds the minimum amount of one hundred million drachmas provisioned by L.2579/1998.

We further notify you that we are willing to provide Public Authorities to which the present report is to be filed, with any additional clarification concerning the data of the Balance Sheet dated 31.12.2000 analyzed and commented above.

Respectfully

CHRISTOS G. CHIRAS

Ημερήσιας Διατάξεως.

ΗΜΕΡΗΣΙΑ ΔΙΑΤΑΞΗ

ΘΕΜΑ: Μετατροπή της Εταιρίας σε Ανώνυμη Εταιρία σύμφωνα με τις διατάξεις του Ν.2166/1993.

Ο Πρόεδρος της Συνέλευσης και διαχειριστής της εταιρίας κ. Απόστολος Καρκανιάς, έλαβε το λόγο και εισηγήθηκε τη μετατροπή της εταιρίας περιορισμένης ευθύνης σε Ανώνυμη εταιρία σύμφωνα με τη δυνατότητα που παρέχεται από τις διατάξεις του Ν.2166/1993, όπως ισχύει σήμερα. Η μετατροπή αυτή κρίνεται συμφέρουσα για την ανάπτυξη και διεύρυνση των εργασιών της εταιρίας και την καλή πορεία αυτής στο μέλλον.

Διεξήχθη διεξοδική συζήτηση των παρισταμένων εταίρων στην οποία αναλύθηκαν όλα τα θέματα, οι διαδικασίες που προβλέπονται από τις διατάξεις των άρθρων 1-5 του Ν.2166/1993 για την μετατροπή της εταιρίας σε Ανώνυμη εταιρία, το νομικό πλαίσιο του Ν.2190/1920 που θα διέπει την εταιρία μετά την μετατροπή της και οι προοπτικές και τα πλεονεκτήματα που θα υπάρξουν για την εταιρία στο μέλλον από αυτή την μετατροπή της σε Ανώνυμη Εταιρία. Κατόπιν των ανωτέρω η έκτακτη Γενική Συνέλευση των εταίρων ομόφωνα αποφάσισε την μετατροπή της ΕΠΕ σε Ανώνυμη Εταιρία βάσει των διατάξεων του Ν.2166/1993, όπως ισχύουν σήμερα. Η μετατροπή θα γίνει με βάση των Ισολογισμό

Το καταστατικό της εκ μετατροπής ιδρυομένης ανωνύμου εταιρίας έχει ως εξής:

ΚΕΦΑΛΑΙΟ ΠΡΩΤΟ

ΣΥΣΤΑΣΗ - ΕΠΩΝΥΜΙΑ - ΕΔΡΑ- ΣΚΟΠΟΣ - ΔΙΑΡΚΕΙΑ

Αρθρο 1

Σύσταση - Επωνυμία

Συνιστάται ανώνυμη εταιρία με την επωνυμία «ΚΑΡΚΑΝΙΑΣ - ΤΕΧΝΟΛΟΓΙΑ ΠΕΡΙΒΑΛΛΟΝΤΟΣ ΑΝΩΝΥΜΗ ΕΤΑΙΡΙΑ» και με τον διακριτικό τίτλο «ΚΑΡΚΑΝΙΑΣ». Για τις σχέσεις της εταιρίας με την Αλλοδαπή η επωνυμία θα αποδίδεται σε πιστή μετάφραση.

Αρθρο 2

Εδρα

Εδρα της εταιρίας ορίζεται η Βιομηχανική Περιοχή της πόλης Λάρισας (ΒΙ.ΠΕ. Λάρισας) όπου υπάρχουν τα γραφεία και οι εγκαταστάσεις σε κτίριο και οικόπεδο της κυριότητάς της.

Η εταιρία έχει την δυνατότητα να ιδρύει υποκαταστήματα, Πρακτορεία, Παραρτήματα, Αντιπροσωπείες ή άλλα γραφεία σ' οποιαδήποτε πόλη της Ελλάδος ή του εξωτερικού. Οι λεπτομέρειες ίδρυσης, συγκρότησης και λειτουργίας τους καθορίζονται από το Διοικητικό Συμβούλιο.

Αρθρο 3

Σκοπός

Σκοπός της εταιρίας είναι: 1) Οι μελέτες, κατασκευές, εγκαταστάσεις συστημάτων και μηχανημάτων καθαρισμού και επεξεργασίας υγρών

ανανεώσιμων πηγών ενέργειας, διαχείρησης - χρηματοδότησης έργων κοινής ωφέλειας (Δημόσια).

Αρθρο 4

Διάρκεια

Η διάρκεια της εταιρίας ορίζεται σε πενήντα (50) χρόνια αρχόμενη από την καταχώρηση στο οικείο Μητρώο Ανωνύμων Εταιριών από την αρμόδια εποπτεύουσα αρχή της διοικητικής απόφασης για την σύσταση της εταιρίας και την έγκριση του καταστατικού της και λήγουσα την αντίστοιχη ημερομηνία του έτους 2051. Με απόφαση της Γενικής Συνέλευσης των μετόχων και τροποποίηση του παρόντος άρθρου δύναται να παραταθεί ή να συντομευθεί ο χρόνος της διάρκειας της εταιρίας.

ΚΕΦΑΛΑΙΟ ΔΕΥΤΕΡΟ

ΑΡΘΡΟ 5

Μετοχικό κεφάλαιο - Μετοχές

1.- Το μετοχικό κεφάλαιο της εταιρίας ορίζει σε διακόσια εκατομμύρια (200.000.000) δραχμές ή 586.940,57 ευρώ, καταβεβλημένο ολόκληρο σύμφωνα με αυτά που ορίζει λεπτομερώς το άρθρο 35 και διαιρείται σε διακόσιες χιλιάδες (200.000) μετοχές ονομαστικής αξίας χιλίων (1.000) δραχμών της καθεμιάς ή 2,93 ευρώ.

2.- Με την επιφύλαξη της παρ. 4 του άρθρου

αυτού. Κατά την διάρκεια της πρώτης πενταετίας από την σύσταση της εταιρίας, το διοικητικό συμβούλιο έχει το δικαίωμα με απόφασή του που λαμβάνεται με πλειοψηφία των δύο τρίτων (2/3) τουλάχιστον του συνόλου των μελών του:

αα) να αυξάνει το μετοχικό κεφάλαιο μερικά ή ολικά με την έκδοση νέων μετοχών, για ποσό που δεν μπορεί να υπερβεί το αρχικό μετοχικό κεφάλαιο

αβ) να εκδίδει ομολογιακό δάνειο με την έκδοση ομολογιών μετατρέψιμων σε μετοχές, για ποσό που δεν μπορεί να υπερβεί το μισό του καταβεβλημένου μετοχικού κεφαλαίου. Στην περίπτωση αυτή εφαρμόζονται οι διατάξεις των παραγράφων 2 και 3 του άρθρου 3α του Κ.Ν.2190/20 όπως ισχύει.

β) Οι πιο πάνω εξουσίες μπορούν να εκχωρούνται στο διοικητικό συμβούλιο και με απόφαση της Γενικής Συνέλευσης η οποία υπόκειται στις διατυπώσεις δημοσιότητας του άρθρου 7β του ΚΝ.2190/20 όπως ισχύει. Στην περίπτωση αυτή, το μεν μετοχικό κεφάλαιο μπορεί να αυξάνεται μέχρι το ποσό του κεφαλαίου που είναι καταβεβλημένο κατά την ημερομηνία που χορηγήθηκε στο διοικητικό συμβούλιο η εν λόγω εξουσία, το δε ύψος του ομολογιακού δανείου, δεν μπορεί να υπερβαίνει το μισό του

καταβεβλημένου μετοχικού κεφαλαίου κατά την ίδια ημερομηνία.

γ) Οι πιο πάνω εξουσίες του διοικητικού συμβουλίου μπορούν να ανανεώνονται από τη γενική συνέλευση για χρονικό διάστημα που δεν υπερβαίνει την πενταετία για κάθε ανανέωση και η ισχύς τους αρχίζει μετά την λήξη της κάθε πενταετίας. Η απόφαση αυτή της γενικής συνέλευσης υπόκειται στις διατυπώσεις δημοσιότητας του άρθρου 7β του ΚΝ.2190/20.

3.- Με την επιφύλαξη της παρ. 4 του άρθρου αυτού η Γενική Συνέλευση εντός της πρώτης πενταετίας από την σύσταση της εταιρίας έχει το δικαίωμα, με απόφασή της, για την οποία χρειάζεται η απαρτία και η πλειοψηφία του άρθρου 14, του παρόντος να αυξάνει το εταιρικό κεφάλαιο ολικά ή μερικά, με την έκδοση νέων μετοχών μέχρι το πενταπλάσιο του αρχικά καταβεβλημένου κεφαλαίου.

4.- Εάν τα αποθεματικά της εταιρίας υπερβαίνουν το ένα τέταρτο (1/4) του καταβεβλημένου μετοχικού κεφαλαίου, τότε απαιτείται πάντα απόφαση της Γενικής συνέλευσης με την απαρτία και την πλειοψηφία του άρθρου 15 του παρόντος και ανάλογη τροποποίηση του σχετικού άρθρου.

5.- Οι αυξήσεις του κεφαλαίου που αποφασίζονται σύμφωνα με τις παρ. 2 και 3 του άρθρου αυτού δεν αποτελούν τροποποίηση του Καταστατικού.

6.- Η αρμοδιότητα του Δ.Σ. να αυξάνει το μετοχικό κεφάλαιο σύμφωνα με την παρ. 2 του παρόντος άρθρου, μπορεί να ασκηθεί παράλληλα με αυτήν της Γενικής Συνέλευσης κατά την παρ. 3 του παρόντος.

Αρθρο 6

1.-Οι μετοχές της εταιρίας είναι ονομαστικές και δεσμευμένες και μεταβιβάζονται μόνο όπως παρακάτω ορίζεται, με τη σύμφωνη γνώμη του Διοικητικού Συμβουλίου και υπογράφονται από τον Πρόεδρο του Διοικητικού Συμβουλίου και ένα μέλος του οριζόμενο από αυτό, δυνάμενες να μετατραπούν σε ανώνυμες και το αντίθετο δι' αποφάσεως της Γενικής Συνελεύσεως σύμφωνα με το άρθρο 14 του παρόντος και τροποποιήσεως του παρόντος άρθρου.

Σε περίπτωση που κάποιος από τους μετόχους θελήσει να μεταβιβάσει μέρος ή το σύνολο των μετοχών του, εφ' όσον τούτο είναι επιτρεπτό κατά νόμο, είναι υποχρεωμένος να απευθύνεται πρώτα στους υπόλοιπους μετόχους και εφ' όσον δεν ενδιαφέρεται κανένας απ' αυτούς, για την αγορά, μόνο τότε θα δικαιούται να τις μεταβιβάσει σε τρίτο. Η τιμή μεταβίβασης της κάθε μετοχής, σε περίπτωση διαφωνίας μεταξύ μεταβιβάζοντος και

αποκτώντος μετόχου, θα καθορίζεται από τον Πρόεδρο Πρωτοδικών Λάρισας, κατά την διαδικασία των ασφαλιστικών μέτρων και κατά της αποφάσεως αυτής δεν θα χωρεί οποιοδήποτε ένδικο μέσο.

2.- Οι μετοχές της εταιρίας είναι αδιαίρετες και αναγνωρίζεται ένας μόνος ιδιοκτήτης για κάθε μία από αυτές. Όλοι οι εξ αδιαιρέτου συγκύριοι μετοχής ή οιουδήποτε τίτλου και εκείνοι που κέκτηνται δικαιώματα επ' αυτών και αυτοί που έχουν την ψιλή κυριότητα ή την επικαρπία, δεν δύνανται να αντιπροσωπεύονται στην εταιρία πλην μόνον με ένα και το αυτό πρόσωπο όλοι. Ο αντιπρόσωπος θα ορίζεται με οποιοδήποτε νόμιμο τρόπο.

3.- Κάθε μετοχή παρέχει δικαίωμα μιας ψήφους στη Γενική Συνέλευση και δικαιώματα συμμετοχής στα κέρδη της εταιρίας και στην εταιρική περιουσία κατά τον λόγο του αριθμού των εκδιδομένων μετοχών και στο προϊόν της εκκαθαρίσεως της εταιρικής περιουσίας σε περίπτωση διαλύσεως και στη διανομή των εκάστοτε κερδών αυτής.

4.-Οι τίτλοι των μετοχών μπορούν να αντιπροσωπεύουν μία ή περισσότερες μετοχές. Τα σχετικά με την έκδοση μετοχών κανονίζονται από το Διοικητικό Συμβούλιο, επιτρέπεται Δε η έκδοση προσωρινών τίτλων.

ΜΕΤΟΧΟΙ

ΑΡΘΡΟ 7

Δικαιώματα μετόχων

1.- Οι μέτοχοι ασκούν τα σχετικά με την διοίκηση της εταιρίας δικαιώματα τους μόνο με τη συμμετοχή τους στη Γενική συνέλευση.

2.- Κάθε μετοχή παρέχει το δικαίωμα μιας ψήφου στη Γενική Συνέλευση.

3.- Η απόφαση του αρμοδίου οργάνου της εταιρίας για αύξηση μετοχικού κεφαλαίου ή έκδοση ομολογιακού δανείου πρέπει να αναφέρει τουλάχιστον το ποσό της αύξησης του κεφαλαίου ή το ύψος του ομολογιακού δανείου, τον τρόπο κάλυψής τους, τον αριθμό και το είδος των μετοχών ή των ομολογιών που θα εκδοθούν, την ονομαστική αξία και την τιμή διάθεσης. Σε κάθε περίπτωση αύξησης του Μετοχικού Κεφαλαίου που δεν γίνεται με εισφορά σε είδος καθώς και έκδοσης ομολογιών με δικαίωμα μετατροπής σε μετοχές, για όλο το νέο κεφάλαιο και το ομολογιακό δάνειο παρέχεται δικαίωμα προτίμησης στους κατά την εποχή της έκδοσης μετόχους της εταιρίας σύμφωνα με το λόγο της συμμετοχής τους στο κεφάλαιο. Μετά την πάροδο της προθεσμίας για την άσκηση του δικαιώματος προτίμησης που ορίζεται από το όργανο της

εταιρίας που αποφασίζει την αύξηση και που δεν μπορεί να είναι μικρότερη από μήνα οι μετοχές που δεν αναλήφθηκαν από τους παλιούς μετόχους μπορούν να διατεθούν ελεύθερα από το Διοικητικό Συμβούλιο. Σε περίπτωση κατά την οποία το όργανο της εταιρίας που αποφάσισε την αύξηση του μετοχικού κεφαλαίου παρέλειψε να ορίσει την προθεσμία για παράταση αυτής, ορίζει με απόφασή του το Διοικητικό Συμβούλιο μέσα στο προβλεπόμενο από το άρθρο 11 του Κ.Ν.2190/20. Η πρόσκληση για την ενάσκηση του δικαιώματος προτίμησης στην οποία πρέπει να μνημονεύεται και η προθεσμία μέσα στην οποία πρέπει να ασκηθεί αυτό το δικαίωμα δημοσιεύεται στο ΦΕΚ (ΤΑΕ -ΕΠΕ). Η κατά τα ανωτέρω πρόσκληση και η προθεσμία άσκησης του δικαιώματος προτίμησης μπορούν να παραλειφθούν, εφ' όσον στην Γενική Συνέλευση παρέστησαν μέτοχοι εκπροσωπούντες το σύνολο του μετοχικού κεφαλαίου και έλαβαν γνώση της προθεσμίας που τάχθηκε για την άσκηση του δικαιώματος προτίμησης ή δήλωσαν την απόφασή τους για την υπ' αυτών άσκηση ή μη του δικαιώματος προτίμησης. Επίσης η δημοσίευση της πρόσκλησης, μπορεί να αντικατασταθεί με συστημένη «επί αποδείξει» επιστολή, εφ' όσον οι μετοχές είναι ονομαστικές στο σύνολό τους.

4.- Με τους περιορισμούς των παρ. 6 και 7 του άρθρου 13 του Κ.Ν. 2190/1920 ως ισχύει μπορεί με απόφαση της Γενικής Συνέλευσης που

καταβολής του ποσού της αύξησης.

γ) Η προθεσμία καταβολής της αύξησης του κεφαλαίου δεν μπορεί να είναι μικρότερη του ενός (1) μηνός και μεγαλύτερη των τεσσάρων (4) μηνών από την ημέρα λήψης της σχετικής απόφασης από το αρμόδιο όργανο της εταιρίας.

δ) Στην περίπτωση που η αύξηση του μετοχικού κεφαλαίου συνοδεύεται από ανάλογη τροποποίηση του σχετικού περί κεφαλαίου άρθρου του καταστατικού, η προθεσμία καταβολής της αύξησης του κεφαλαίου αρχίζει από την ημέρα λήψης της σχετικής απόφασης από την Γενική Συνέλευση των μετόχων, δυνάμενη να παραταθεί από το Διοικητικό Συμβούλιο για ένα (1) ακόμη μήνα.

ε) Μέσα σε είκοσι (20) ημέρες από τη λήξη της προθεσμίας των παραγράφων 6α και 6β του παρόντος άρθρου, η εταιρία υποχρεούται να υποβάλει στο Υπουργείο Εμπορίου αντίγραφο του σχετικού πρακτικού συνεδρίασης του Διοικητικού Συμβουλίου. Αν περάσει άπρακτη η προθεσμία αυτή, στην περίπτωση καταβολής αρχικού κεφαλαίου, έχουν εφαρμογή οι διατάξεις του άρθρου 48 παρ. 1 εδ. α του Κ.Ν. 2190/1920 και στην περίπτωση αύξησης του κεφαλαίου ανακαλείται η σχετική εγκριτική απόφαση τροποποίησης του καταστατικού.

στ) Η καταβολή μετρητών για κάλυψη του αρχικού μετοχικού κεφαλαίου ή τυχόν αυξήσεων αυτού, καθώς και οι καταθέσεις μετόχων με

παραπάνω παρ. 8 και 9 πρέπει να τηρούν σε κατάθεση τις μετοχές που τους παρέχουν το δικαίωμα αυτό, στο Ταμείο Παρακαταθηκών και Δανείων ή στην Τράπεζα της Ελλάδος ή σε άλλη αναγνωρισμένη Ελληνική Τράπεζα, μέχρι να εκδοθεί απόφαση, πάντα όμως για χρονικό διάστημα όχι μικρότερο των τριάντα (30) ημερών από την υποβολή της αίτησης.

ΚΕΦΑΛΑΙΟ ΤΕΤΑΡΤΟ

ΓΕΝΙΚΗ ΣΥΝΕΛΕΥΣΗ

Άρθρο 9

Αρμοδιότητα Γενικής Συνέλευσης

1.- Η Γενική Συνέλευση των μετόχων της εταιρίας είναι το ανώτατο όργανό της και δικαιούται να αποφασίζει για κάθε υπόθεση που αφορά της εταιρία. Οι νόμιμες αποφάσεις της δεσμεύουν και τους μετόχους που απουσιάζουν ή διαφωνούν.

2.- Η Γενική Συνέλευση είναι η μόνη αρμόδια να αποφασίζει για:

α) Παράταση της διάρκειας, διάσπαση, μετατροπή, αναβίωση, συγχώνευση ή διάλυση της εταιρίας.

β) Τροποποίηση του Καταστατικού.

γ) Αύξηση ή μείωση του Μετοχικού Κεφαλαίου, εκτός από την περίπτωση της παρ. 2 και 3 του άρθρου 5 του παρόντος, αποφασιζόμενος αυξήσεις από το Διοικητικό Συμβούλιο ή τη Γενική συνέλευση καθώς και οι επιβαλλόμενες από τις

διατάξεις άλλων Νόμων.

δ) Εκδοση δανείου με ομολογίες εκτός από την περίπτωση της παρ. 2 του άρθρου 5 του παρόντος.

ε) Εκλογή μελών του Διοικητικού Συμβουλίου, εκτός από τις περιπτώσεις του άρθρου 22 και 36 του παρόντος.

στ) Εκλογή ελεγκτών.

ζ) Διορισμό εκκαθαριστών.

η) Διάθεση κερδών.

θ) Εγκριση των ετήσιων οικονομικών καταστάσεων.

3.- Στην ανωτέρω παρ. 2 δεν υπάγεται η κατά το άρθρο 78 του Κ.Ν. 2190/20 απορρόφηση της ανώνυμης εταιρίας από άλλη ανώνυμη εταιρία που κατέχει το 100% των μετοχών της.

Αρθρο 10

Σύγκληση Γενικής Συνέλευσης

1.- Η Γενική συνέλευση των μετόχων, συγκαλείται από το Διοικητικό συμβούλιο και συνέρχεται τακτικά στην έδρα της εταιρίας τουλάχιστον μια φορά το χρόνο, πάντοτε μέσα στο πρώτο εξάμηνο από τη λήξη κάθε εταιρικής χρήσης και εξαιρετικά και εκτός της έδρας τηρουμένων των διατάξεων του άρθρου 25 του Κ.Ν. 2190/20, όπως τροποποιήθηκε και ισχύει. Το Διοικητικό

Συμβούλιο μπορεί να συγκαλεί σε έκτακτη συνεδρίαση τη Γενική Συνέλευση των μετόχων όταν το κρίνει σκόπιμο.

2.- Η Γενική Συνέλευση με εξαίρεση τις επαναληπτικές συνελεύσεις και εκείνες που εξομοιώνονται μ' αυτές, πρέπει να καλείται είκοσι (20) τουλάχιστον ημέρες πριν από την οριζόμενη για τη συνεδρίαση της.

Διευκρινίζεται ότι συνυπολογίζονται και οι μη εργάσιμες ημέρες.

Η ημέρα της πρόσκλησης της Γενικής Συνέλευσης και η ημέρα της συνεδρίασης δεν υπολογίζονται.

3.- Μέτοχοι που εκπροσωπούν το σύνολο του καταβεβλημένου μετοχικού κεφαλαίου, μπορούν να συνέλθουν οποτεδήποτε σε έκτακτη Γενική Συνέλευση, στην έδρα της εταιρίας, χωρίς τις διατυπώσεις δημοσίευσης της πρόσκλησης και να συζητήσουν και αποφασίζουν για οποιοδήποτε θέμα της εταιρίας έστω και εάν αυτό δεν περιλαμβάνεται στην ημερήσια διάταξη, εφόσον για όλα τα ανωτέρω δεν αντιλέγει κανένας από τους μετόχους. Για την εγκυρότητα των αποφάσεων της απαιτείται η πλειοψηφία που προβλέπεται από το Νόμο και το παρόν καταστατικό.

Αρθρο 11

Πρόσκληση - Ημερήσια Διάταξη Γενικής Συνέλευσης

1.- Στην πρόσκληση των μετόχων σε Γενική Συνέλευση αναφέρονται το οίκημα που θα συνέλθει η συνέλευση, η χρονολογία και η ώρα

μ' αυτές οι παραπάνω προθεσμίες συντέμνονται στο μισό.

2.- Το Διοικητικό συμβούλιο της εταιρίας έχει την υποχρέωση δέκα (10) ημέρες πριν από την τακτική Γενική Συνέλευση να δίνει σε κάθε μέτοχο που το ζητάει τις ετήσιες οικονομικές καταστάσεις της και αντίτυπο της έκθεσης του Διοικητικού Συμβουλίου καθώς και της έκθεσης των ελεγκτών πάνω σ' αυτήν.

Αρθρο 12

Κατάθεση Μετοχών - Αντιπροσώπευση

1.- Οι μέτοχοι που επιθυμούν να πάρουν μέρος στη Γενική Συνέλευση, οφείλουν να καταθέσουν τους τίτλους των μετοχών τους στο ταμείο της εταιρίας ή στο ταμείο Παρακαταθηκών και Δανείων ή σε οποιαδήποτε Τράπεζα της Ελλάδος, τουλάχιστον πέντε (5) ολόκληρες ημέρες πριν από εκείνη, για την οποία ορίστηκε η συνεδρίαση της συνέλευσης.

2.- Οι μέτοχοι που έχουν δικαίωμα συμμετοχής στη Γενική συνέλευση μπορούν ν' αντιπροσωπευθούν σ' αυτή από πρόσωπο που έχουν εξουσιοδοτήσει.

3.- Οι αποδείξεις κατάθεσης των μετοχών καθώς και τα έγγραφα νομιμοποίησης αντιπροσώπων των μετόχων, πρέπει να κατατίθενται στην εταιρία τουλάχιστον πέντε (5) ολόκληρες ημέρες πριν από τη συνεδρίαση της Γενικής Συνέλευσης.

4.- Μέτοχοι που δεν έχουν συμμορφωθεί με τις διατάξεις των παρ. 1 και 3 του άρθρου αυτού,

πρόσκληση δέκα (10) ημέρες τουλάχιστον πριν. Η επαναληπτική αυτή συνεδρίαση βρίσκεται σε απαρτία και συνεδριάζει εγκύρως για τα θέματα της αρχικής ημερήσιας διάταξης, οποιοιδήποτε και αν είναι το τμήμα του καταβλημένου μετοχικού κεφαλαίου που εκπροσωπείται σ' αυτή.

3.- Οι αποφάσεις της Γενικής συνέλευσης παίρνονται με απόλυτη πλειοψηφία των ψήφων που εκπροσωπούνται στη συνέλευση.

Αρθρο 15

Εξαιρετική απαρτία και πλειοψηφία Γενικής Συνέλευσης

1.- Εξαιρετικά η Γενική συνέλευση βρίσκεται σε απαρτία και συνεδριάζει εγκύρως επί των θεμάτων της ημερήσιας διάταξης, εάν εκπροσωπούνται σ' αυτή τα δύο τρίτα (2/3) του καταβλημένου μετοχικού κεφαλαίου, όταν πρόκειται για αποφάσεις που αφορούν:

α) παράταση της διάρκειας, διάσπαση, μετατροπή, αναβίωση, συγχώνευση ή διάλυση της εταιρίας.

β) Μεταβολή της εθνικότητας της εταιρίας.

γ) Μεταβολή του αντικειμένου της επιχειρήσεως της εταιρίας.

δ) Αύξηση ή μείωση του μετοχικού κεφαλαίου, με εξαίρεση τις αυξήσεις του άρθρου 5 παρ. 2 και 3 του παρόντος και τις επιβαλλόμενες από διατάξεις άλλων νόμων ή γενόμενη με κεφαλαιοποίηση αποθεματικών.

ε) Εκδοση δανείου με ομολογίες, σύμφωνα με το

4.- Ολες οι αποφάσεις της παρ. 1 του παρόντος άρθρου παίρνονται με πλειοψηφία των δύο τρίτων (2/3) των ψήφων που εκπροσωπούνται στην συνέλευση.

Αρθρο 16

Πρόεδρος - Γραμματέας Γενικής Συνέλευσης

1.- Στη Γενική Συνέλευση προεδρεύει προσωρινά ο Πρόεδρος του Διοικητικού Συμβουλίου, ή αν κωλύεται αυτός, ο αναπληρωτής του. Χρέη γραμματέα εκτελεί προσωρινά αυτός που ορίζεται από τον Πρόεδρο.

2.- Αφού εγκριθεί ο κατάλογος των μετόχων που έχουν δικαίωμα ψήφου, η συνέλευση προχωρεί στην εκλογή του Προέδρου της και ενός Γραμματέα που εκτελεί και χρέη ψηφοσυλλέκτη.

Αρθρο 17

Θέματα συζήτησης -Πρακτικά Γενικής Συνέλευσης.

1.- Οι συζητήσεις και οι αποφάσεις της Γενικής συνέλευσης καθορίζονται στα θέματα που αναγράφονται στην ημερήσια διάταξη.

2.- Για τα θέματα που συζητούνται και αποφασίζονται στη Γενική συνέλευση τηρούνται πρακτικά που υπογράφονται από τον Πρόεδρο και το Γραμματέα της.

3.- Τα αντίγραφα και τα αποσπάσματα των πρακτικών, επικυρώνονται από τον Πρόεδρο του Διοικητικού Συμβουλίου ή τον αναπληρωμή του.

4.- Η εταιρία υποχρεούται να χορηγεί στους

μετόχους της αντίγραφα πρακτικών γενικών συνελεύσεων. Οι μέτοχοι στους οποίους η εταιρία αρνείται να χορηγήσει αντίγραφα των πρακτικών της γενικής συνέλευσης, μπορούν να απευθυνθούν στην αρμόδια διοικητική αρχή, όπου τηρείται ο φάκελος της εταιρίας, η οποία υποχρεούται να τους χορηγήσει τα αντίγραφα αυτά.

Αρθρο 18

Απόφαση απαλλαγής μελών του Διοικητικού Συμβουλίου και Ελεγκτών

Μετά την έγκριση των οικονομικών καταστάσεων, η Γενική συνέλευση σε ειδική ψηφοφορία που ενεργείται με ονομαστική κλήση αποφαίνεται για την απαλλαγή των μελών του Διοικητικού Συμβουλίου και των ελεγκτών από κάθε ευθύνη για αποζημίωση. Τα μέλη του Διοικητικού συμβουλίου και οι υπάλληλοι της εταιρίας ψηφίζουν μόνο με τις μετοχές τους. Η απαλλαγή του Διοικητικού Συμβουλίου είναι ανίσχυρη στις διατάξεις του άρθρου 22 α του Κ.Ν. 2190/1920.

1.- Η εταιρία διοικείται από το Διοικητικό συμβούλιο που αποτελείται από τρεις (3) ως επτά (7) συμβούλους.

2.- Τα μέλη του Διοικητικού Συμβουλίου εκλέγονται από την Γενική συνέλευση των μετόχων της εταιρίας για πεντάχρονη θητεία, που παρατείνεται αυτόματα μέχρι την πρώτη τακτική Γενική συνέλευση μετά τη λήξη της θητείας τους, η οποία δεν μπορεί όμως να περάσει την εξαετία.

3.- Τα μέλη του Διοικητικού συμβουλίου μπορούν να ξαναεκλεγούν.

Αρθρο 20

Εξουσία - Αρμοδιότητες Διοικητικού Συμβουλίου

1.- Το Διοικητικό Συμβούλιο έχει τη διοίκηση (διαχείριση και διάθεση) της εταιρικής περιουσίας και την εκπροσώπηση της εταιρίας. Αποφασίζει για όλα γενικά τα ζητήματα που αφορούν την εταιρία μέσα στα πλαίσια του εταιρικού σκοπού, με εξαίρεση εκείνη που σύμφωνα με το νόμο ή αυτό το καταστατικό ανήκουν στην αποκλειστική αρμοδιότητα της Γενικής συνέλευσης.

2.- Η εταιρία με την επιφύλαξη της επομένης παραγράφου αναλαμβάνει υποχρεώσεις και δεσμεύεται με την υπογραφή ενός εξουσιοδοτημένου μέλους του Διοικητικού Συμβουλίου κάτω από την εταιρική επωνυμία.

3.- Το Διοικητικό Συμβούλιο μπορεί,

αποκλειστικά και μόνο εγγράφως, να αναθέτει την άσκηση όλων των εξουσιών και αρμοδιοτήτων του (εκτός από αυτές που απαιτούν συλλογική ενέργεια) καθώς και την εκπροσώπηση της εταιρίας, σε ένα ή περισσότερα πρόσωπα μέλη του ή όχι, καθορίζοντας συγχρόνως και την έκταση αυτής της ανάθεσης. Οι αρμοδιότητες του Διοικητικού Συμβουλίου είναι υπό την επιφύλαξη των άρθρων 10, 22 και 23 α του Κ.Ν. 2190/1920.

Αρθρο 21

Συγκρότηση Διοικητικού Συμβουλίου

1.- Το Διοικητικό Συμβούλιο αμέσως μετά την εκλογή του συνέρχεται και συγκροτείται σε σώμα, εκλέγοντας τον Πρόεδρο και τον Αντιπρόεδρό του.

2.- Το Διοικητικό Συμβούλιο μπορεί να εκλέγει ένα ή δύο διευθύνοντες συμβούλους από τα μέλη του και μόνο, καθορίζοντας συγχρόνως και τις αρμοδιότητές τους.

3.- Ο Πρόεδρος του Διοικητικού Συμβουλίου διευθύνει τις συνεδριάσεις. Τον πρόεδρο όταν απουσιάζει ή κωλύεται αναπληρώσει σε όλη την έκταση των αρμοδιοτήτων του ο Αντιπρόεδρος και αυτόν, όταν κωλύεται μετά από απόφαση του Διοικητικού Συμβουλίου ο Διευθύνων Σύμβουλος.

Αρθρο 22

Αναπλήρωση μέλους του Διοικητικού συμβουλίου

Αν, για οποιοδήποτε λόγο, κενωθεί θέση συμβούλου, επιβάλλεται στους συμβούλους που απομένουν, εφόσον έχουν την νόμιμη απαρτία, να εκλέξουν προσωρινό αντικαταστάτη για το υπόλοιπο της θητείας του συμβούλου που αναπληρώνεται.

Η εκλογή αυτή υποβάλλεται για έγκριση στην αμέσως επομένη τακτική ή έκτακτη Γενική συνέλευση. Οι πράξεις του συμβούλου που εκλέχτηκε με αυτόν τον τρόπο θεωρούνται έγκυρες, ακόμη και αν η εκλογή του δεν εγκριθεί από την Γενική συνέλευση.

Αρθρο 23

Σύγκληση του Διοικητικού συμβουλίου

1.- Το Διοικητικό Συμβούλιο συνεδριάζει στην έδρα της εταιρίας τουλάχιστον μια φορά το μήνα.

Συγκαλείται οποτεδήποτε από τον Πρόεδρο του ή αν το ζητήσουν δύο μέλη του.

2.- Το Διοικητικό Συμβούλιο εγκύρως συνεδριάζει εκτός της έδρας του σε άλλο τόπο, είτε στην ημεδαπή είτε στην αλλοδαπή, εφόσον στη συνεδρίαση αυτή παρίστανται ή αντιπροσωπεύονται όλα τα μέλη του και κανένα δεν αντιλέγει στην πραγματοποίηση της συνεδρίασης και στη λήψη αποφάσεων.

αναφέρονται με σαφήνεια και τα θέματα με τα οποία θα ασχοληθεί το Διοικητικό συμβούλιο.

Αρθρο 24

Αντιπροσώπευση μελών - Απαρτία - Πλειοψηφία

1.- Σύμβουλος που απουσιάζει μπορεί να εκπροσωπείται από άλλο σύμβουλο. Κάθε σύμβουλος μπορεί να εκπροσωπεί ένα μόνο σύμβουλο που απουσιάζει. Σύμβουλος που απουσιάζει συνεχώς αδικαιολόγητα πέραν των έξι (6) τακτικών συνεδριάσεων του Διοικητικού Συμβουλίου αντικαθίσταται με απόφαση του Διοικητικού Συμβουλίου σύμφωνα με τους όρους του παρόντος άρθρου.

2.- Το Διοικητικό Συμβούλιο βρίσκεται σε απαρτία και συνεδριάζει έγκυρα, όταν παραβρίσκονται αντιπροσωπεύονται σ' αυτό, το ήμισυ πλέον ενός των συμβούλων, ουδέποτε όμως ο αριθμός των παρόντων συμβούλων μπορεί να είναι μικρότερος των τριών (3). Για να βρεθεί ο αριθμός απαρτίας παραλείπεται τυχόν προκύπτον κλάσμα.

3.- Οι αποφάσεις του Διοικητικού Συμβουλίου, παίρνονται με απόλυτη πλειοψηφία των συμβούλων που είναι παρόντες και εκείνων που αντιπροσωπεύονται, εκτός από την περίπτωση της παραγράφου 2 του άρθρου 5 του παρόντος. Σε περίπτωση ισοψηφίας δεν υπερισχύει η ψήφος του Προέδρου του Δ.Σ.

διάταξης, η εταιρία έχει δικαίωμα για αποζημίωση σύμφωνα με το άρθρο 23 παρ. 2, 3 του Κ.Ν. 2190/1920.

ΚΕΦΑΛΑΙΟ ΕΚΤΟ

ΕΛΕΓΧΟΙ

Αρθρο 28

1.-Η τακτική Γενική Συνέλευση εκλέγει κάθε χρόνο δύο (2) τακτικούς και δύο (2) αναπληρωματικούς ελεγκτές, πτυχιούχους Ανωτάτων Σχολών που έχουν άδεια Οικονομολογικού Επαγγέλματος από το Οικονομικό Επιμελητήριο Ελλάδος, σύμφωνα με τις διατάξεις του άρθρου 2 ΠΔ.475/91 (ΦΕΚ 176 Α) και δεν μπορούν να επαναδιορίζονται για περισσότερες από πέντε χρήσεις, ορίζοντας και την αμοιβή τους.

2.- Η συνέλευση μπορεί να εκλέγει ένα μόνο τακτικό και ένα αναπληρωματικό ελεγκτή, εφόσον είναι ορκωτοί ελεγκτές. Πάντως, εφόσον γίνεται υπέρβαση των ορίων της παρ. 6 του άρθρου 42 α του Κ.Ν. 2190/1920 όπως ισχύει, η εκλογή των Ορκωτών Ελεγκτών είναι υποχρεωτική, σύμφωνα με τις σχετικές διατάξεις της νομοθεσίας που ισχύουν κάθε φορά.

3.- Μέσα σε πέντε (5) ημέρες από την συνεδρίαση της Γενικής Συνέλευσης που όρισε

Οι ετήσιες οικονομικές καταστάσεις (ισολογισμός) υποβάλλονται για έγκριση στην τακτική Γενική Συνέλευση και συνοδεύονται:

α) Από επεξηγηματική έκθεση του Διοικητικού συμβουλίου στην οποία αναφέρονται όλα τα καθοριζόμενα στο άρθρο 43α και 3 εδαφ. α και β του Κ.Ν. 2190/1920, ως τροποποιήθηκε από το Π.Δ. 409/86 και β)από την έκθεσητωνελεγκτών.

2.- Ο Ισολογισμός και ο λογαριασμός αποτελεσμάτων χρήσης και ο πίνακας διαθέσεως κερδών μαζί με το σχετικό πιστοποιητικό ελέγχου, όταν ο έλεγχος γίνεται από ορκωτούς ελεγκτές δημοσιεύονται είκοσι (20) ημέρες πριν από τη συνεδρίαση της Συνέλευσης σύμφωνα με αυτά που ορίζονται από το νόμο, στις εφημερίδες που μνημονεύονται στο άρθρο 43β παρ. 5 και 7β παρ. 1 εδάφιο Β του Κ.Ν. 2190/1920 όπως ισχύει.

3.- Για να εγκριθεί έγκυρα από τη Γενική Συνέλευση οι ετήσιες οικονομικές καταστάσεις πρέπει να ελεγχθούν από τους ελεγκτές της εταιρίας και να έχουν θεωρηθεί ειδικά από τρία διαφορετικά πρόσωπα ήτοι:

α) τον Πρόεδρο του Διοικητικού Συμβουλίου.

β) Τον Αντιπρόεδρο του Διοικητικού Συμβουλίου

γ) Αυτόν που διευθύνει το λογιστήριο.

Διάθεση κερδών

Με την επιφύλαξη των διατάξεων του άρθρου 44 α του Κ.Ν. 2190/1920 που προστέθηκε με το άρθρο 37 του Π.Δ. 409/1986 η διάθεση των καθαρών κερδών της εταιρίας γίνεται με τον ακόλουθο τρόπο:

α) Προηγείται η διάθεση του ποσοστού για το σχηματισμό του τακτικού αποθεματικού, όπως ορίζει ο νόμος δηλαδή για το σκοπό αυτό αφαιρείται τουλάχιστον το ένα εικοστό (1/20) των καθαρών κερδών. Όπως είναι γνωστό, σύμφωνα με το νόμο η αφαίρεση αυτή παύει να είναι υποχρεωτική, όταν αυτό φθάσει σε ποσό ίσο τουλάχιστον με το ένα τρίτο (1/3) του εταιρικού κεφαλαίου.

β) Ακολουθεί η διάθεση του ποσού που απαιτείται για την καταβολή του πρώτου μερίσματος δηλαδή ποσοστού έξι τοις εκατό (6%) τουλάχιστον του καταβλημένου μετοχικού κεφαλαίου και σύμφωνα με το άρθρο 45 του Κ.Ν. 2190/1920 σε συνδυασμό με τις διατάξεις του Κ.Ν. 148/1967, του Ν.Δ. 34/1968 και του Ν.876/1979.

γ) Η Γενική συνέλευση διαθέτει ελεύθερα το υπόλοιπο.

1.- Η εταιρία λύνεται:

α) Μόλις περάσει ο χρόνος διάρκειάς της, εκτός αν προηγούμενα αποφασιστεί από τη Γενική Συνέλευση η παράταση της διάρκειάς της.

β) με απόφαση της Γενικής συνέλευσης

γ) Μόλις η εταιρία κηρυχθεί σε πτώχευση.

2.- Η συγκέντρωση όλων των μετοχών σε ένα πρόσωπο δεν αποτελεί λόγο για τη λύση της εταιρίας.

3.- Σε περίπτωση που το σύνολο των ιδίων κεφαλαίων της εταιρίας ως ορίζεται στο άρθρο 42γ του Κ.Ν. 2190/1920 ως τροποποιήθηκε από το Π.Δ. 409/1986 μειωθεί περισσότερο από το μισό του καταβλημένου μετοχικού κεφαλαίου, το Διοικητικό συμβούλιο έχει υποχρέωση να συγκαλέσει Γενική συνέλευση μέσα σε προθεσμία έξι (6) μηνών από τη λήξη της χρήσης για να αποφασίσει για το αν διαλυθεί η εταιρία ή αν θα υιοθετηθεί άλλο μέτρο.

Αρθρο 33

Εκκαθάριση

1.- Εκτός από την περίπτωση της πτώχευσης, τη λύση της εταιρίας ακολουθεί η εκκαθάρισή της. Στην περίπτωση του εδαφίου α της παρ. 1 του άρθρου 32 του παρόντος, το Διοικητικό

Συμβούλιο εκτελεί χρέη εκκαθαριστή μέχρι να διοριστούν εκκαθαριστές από τη Γενική Συνέλευση. Στην περίπτωση του εδαφίου β της ίδιας ως άνω παραγράφου του ίδιου άρθρου η Γενική Συνέλευση με την ίδια απόφαση ορίζει και τους εκκαθαριστές. Οι εκκαθαριστές που ορίζει η Γενική συνέλευση μπορούν να είναι δύο έως τέσσερις, μέτοχοι ή όχι και ασκούν όλες τις συναφείς με την διαδικασία και τον σκοπό της εκκαθάρισης αρμοδιότητες του Διοικητικού Συμβουλίου, όπως αυτές έχουν τυχόν περιοριστεί από τη Γενική συνέλευση, με τις αποφάσεις της οποίας έχουν την υποχρέωση να συμμορφώνονται. Ο διορισμός των εκκαθαριστών συνεπάγεται αυτοδίκαια την παύση της εξουσίας των μελών του Διοικητικού Συμβουλίου.

2.- Οι εκκαθαριστές που ορίζονται από τη Γενική συνέλευση οφείλουν να συντάσσουν και να δημοσιεύουν στον τύπο και στο τεύχος Ανωνύμων Εταιριών και Εταιριών Περιορισμένης Ευθύνης της Εφημερίδας της Κυβερνήσεως ισολογισμό του οποίου αντίτυπο υποβάλλεται στην Εποπτεύουσα Αρχή της αρμόδιας Νομαρχίας. Επίσης κατά τη Διάρκεια της εκκαθάρισης οφείλουν να συντάσσουν και να δημοσιεύουν στον τύπο και στο ΦΕΚ (ΤΑΕ - ΕΠΕ) Ισολογισμό αυτής σύμφωνα με την περίπτωση ιβ του άρθρου 7 α του Κ.Ν. 2190/1920, όπως τούτο προστέθηκε με το άρθρο 7 του Π.Δ. 409/1986. Επίσης οι εκκαθαριστές πρέπει να περατώσουν χωρίς καθυστέρηση, τις εκκρεμείς

υποθέσεις της εταιρίας, να μετατρέψουν σε χρήμα την εταιρική περιουσία, να εξοφλήσουν τα χρέση της και να εισπράξουν τις απαιτήσεις αυτής. Μπορούν δε να ενεργήσουν και νέες πράξεις, εφόσον με αυτές εξυπηρετούνται η εκκαθάριση και το συμφέρον της εταιρίας. Οι εκκαθαριστές μπορούν επίσης να εκποιήσουν τα ακίνητα της εταιρίας, την εταιρική επιχείρηση στο σύνολό της ή κλάδους αυτής ή μεμονωμένα πάγια στοιχεία της, αλλά μετά την πάροδο τεσσάρων (4) μηνών από τη λύση της εταιρίας, κάθε μέτοχος ή και δανειστής της μπορούν να ζητήσουν από το Μονομελές Πρωτοδικείο της έδρας της εταιρίας, το οποίο δικάζει κατά τα άρθρα 739 επ. του Κώδικα Πολιτικής Δικονομίας, να καθορίσει την κατώτερη τιμή πώλησης των ακινήτων, κλάδων ή τμημάτων ή του συνόλου της εταιρίας, η απόφαση δε αυτού δεσμεύει τους εκκαθαριστές και δεν υπόκειται σε τακτικά ή έκτακτα ένδικα μέσα.

3.- Την ίδια υποχρέωση έχουν οι εκκαθαριστές και όταν λήξει η εκκαθάριση.

4.- Η Γενική συνέλευση διατηρεί όλα τα δικαιώματά της κατά τη διάρκεια της εκκαθάρισης.

5.- Οι ισολογισμοί της εκκαθάρισης εγκρίνονται από τη Συνέλευση των Μετόχων που

επίσης αποφασίζει για την απαλλαγή των εκκαθαριστών από κάθε ευθύνη.

6.- Κάθε έτος υποβάλλονται στη Γενική συνέλευση τα αποτελέσματα της εκκαθάρισης με έκθεση των αιτιών που παρεμπόδισαν την αποπεράτωση της εκκαθάρισης. Το στάδιο της εκκαθάρισης δεν μπορεί να υπερβεί την πενταετία από την ημερομηνία έναρξη της εκκαθάρισης οπότε και η εταιρία διαγράφεται από το Μητρώο Α.Ε.. Για τη συνέχιση της εκκαθάρισης πέραν της πενταετίας απαιτείται ειδική άδεια του Υπουργού Εμπορίου. Το στάδιο όμως της εκκαθάρισης δεν μπορεί σε καμμία περίπτωση να υπερβεί την δεκαετία.

Η παρούσα έκθεση έχει όλα εκείνα τα στοιχεία, τις πληροφορίες, τις αναλύσεις των κονδυλίων του Ισολογισμού και τις παρατηρήσεις, που συνθέτουν την εκτίμηση της Οικονομικής Κατάστασης της εταιρείας κατά την 31.12.2000 και ως εκ τούτου υπέχει και θέση Πιστοποιητικού Ειδικού Ελέγχου, για τη διαπίστωση της λογιστικής αξίας των περιουσιακών στοιχείων της εταιρείας κατά την 31.12.2000, προκειμένου να μετασχηματισθεί σύμφωνα με το Ν. 2166/1993.

Αντικείμενο του ελέγχου μας υπήρξαν τα κονδύλια του Ενεργητικού και του Παθητικού του Ισολογισμού της 31.12.2000, που προορίζονται να μεταφερθούν για τη μετατροπή της εταιρείας αυτής σε Ανώνυμη Εταιρεία.

Η αναλυτική ανάπτυξη των ανωτέρω κονδυλίων, με τις απαραίτητες πληροφορίες, τα σχόλια και τις παρατηρήσεις μας, παρατίθεται στις επόμενες σελίδες της παρούσας Έκθεσης.

2. Σύσταση – Έδρα – Διάρκεια

Με το υπ'αριθμό 28340/10.12.1986 Καταστατικό Εταιρείας Περιωρισμένης Ευθύνης του Συμβολαιογράφου Λάρισας Δημητρίου Παναγιώτου Ζάγουρα, που δημοσιεύθηκε στα βιβλία Εταιρειών Ε.Π.Ε. του Πρωτοδικείου Λάρισας με αύξ. αριθμό 91/19.12.1986 και στο ΦΕΚ 3418/29/12/1986 (τεύχος Α.Ε. και Ε.Π.Ε.), συστάθηκε Εταιρεία Περιωρισμένης Ευθύνης με την επωνυμία «Α. ΚΑΡΚΑΝΙΑΣ ΕΤΑΙΡΕΙΑ ΠΕΡΙΩΡΙΣΜΕΝΗΣ ΕΥΘΥΝΗΣ».

Έδρα της Εταιρείας, βάσει της υπ' αριθμό 12981/31.7.1995 πράξης τροποποιήσεως του Καταστατικού Εταιρείας περιωρισμένης Ευθύνης της Συμβολαιογράφου Λάρισας Ελένης – Ευγενείας Ρομοσιού – Κλειτσάκη, που καταχωρήθηκε στα βιβλία εταιρειών του Πρωτοδικείου Λάρισας με αυξ. Αριθμό 80/31.8.1995 και δημοσιεύτηκε στο ΦΕΚ 5690/4.10.1995, ορίστηκε η βιομηχανική Περιοχή Λάρισας, με διάρκεια αορίστου χρόνου η οποία αρχίζει από τη νόμιμη σύστασή της δηλ. από την 29.12.1986.

Κατόπιν των ανωτέρω, η συμμετοχή στο Εταιρικό Κεφάλαιο εμφανίζεται ως εξής:

ΕΤΑΙΡΟΙ	ΕΤΑΙΡΙΚΑ ΜΕΡΙΔΙΑ	ΑΞΙΑ ΜΕΡΙΔΙΩΝ	ΜΕΡΙΔΑ ΣΥΜ/ΧΗΣ	ΠΟΣΟΣΤΟ ΣΥΜ/ΧΗΣ
- ΑΠΟΣΤΟΛΟΣ ΓΕΩΡΓΙΟΥ ΚΑΡΚΑΝΙΑΣ	15.000	150.000.000	1	75%
- ΣΤΑΜΑΤΙΑ ΣΥΖΥΓΟΣ ΑΠΟΣΤΟΛΟΥ ΚΑΡΚΑΝΙΑ	5.000	50.000.000	1	25%
	20.000	200.000.000		100%

5. Διαχείριση και εκπροσώπηση

Τη διαχείριση των εταιρικών υποθέσεων και την εκπροσώπηση της εταιρείας έχουν αναλάβει, με την υπ'αριθμό 12981/31.7.1995 Πράξη τροποποιήσεως Καταστατικού Εταιρείας Περιωρισμένης Ευθύνης της Συμβολαιογράφου Λάρισας Ελένης – Ευγενείας Ρομοσιού – Κλειτσάκη, οι Εταίροι Απόστολος Γεωργίου Καρκανιάς και Σταματία σύζυγος Αποστόλου Καρκανιά, με θητεία αορίστου διαρκείας, ενεργούντες είτε από κοινού είτε ο καθένας χωριστά δεσμεύοντες την εταιρεία δια της υπογραφής.

6. Στοιχεία στα οποία στηρίχθηκε ο έλεγχος

Για τον ειδικό αυτό έλεγχο βασιστήκαμε:

α) Στις ελεγκτικές διαδικασίες που κρίναμε κατάλληλες, βάσει των αρχών και κανόνων ελεγκτικής που ακολουθεί το Σώμα Ορκωτών Ελεγκτών Λογιστών.

β) Στα βιβλία και στοιχεία που τήρησε η εταιρεία καθώς και στις αναγκαίες πληροφορίες και επεξηγήσεις που μας δόθηκαν.

γ) Στις έγγραφες διαβεβαιώσεις της εταιρείας ότι, όλες οι γνωστές υποχρεώσεις αυτής και το σύνολο της περιουσίας της είναι καταχωρημένα στα βιβλία της και ότι δεν υπάρχουν εκκρεμείς δίκες και ενδεχόμενες υποχρεώσεις που θα μπορούσαν να αλλοιώσουν ουσιαστικά την Οικονομική Κατάσταση της εταιρείας, εκτός από την εκκρεμοδικία κατά πελάτη για την οποία αναφερόμαστε παρακάτω στην παράγραφο II.Β.14.

- Χρεωστικό υπόλοιπο λογαριασμού Εκκαθάρισης φόρου εισοδήματος χρήσεως 1999. δρχ. 4.714.976

- Χρεωστικό υπόλοιπο λογαριασμού εκκαθάρισης φόρου εισοδήματος χρήσεως 2000 δρχ. 27.123.353

δρχ. 31.838.329

Σχετικά με τις ανωτέρω απαιτήσεις σημειώνουμε το εξής:

- Στις 8/1/2001 εισπράχθηκε από το Ελληνικό Δημόσιο ποσό δρχ. 4.710.260 έναντι της απαίτησης προς επιστροφή που προέκυπτε από τη Δήλωση φορολογίας εισοδήματος της εταιρείας του οικονομικού έτους 2000.

- Το χρεωστικό υπόλοιπο του λογαριασμού Εκκαθάρισης φόρου εισοδήματος 2000 προέρχεται ως εξής:

Προκαταβληθείς φόρος εισοδήματος 3% επί των Εσόδων από Δημόσια Τεχνικά έργα δρχ. 30.281.534

(+) Παρακρατηθείς φόρος εισοδήματος 3% επί εσόδων από Ιδιωτικά τεχνικά έργα « 13.265.707

δρχ. 43.547.241

Μείον: Φόρος εισοδήματος φορολογητέων κερδών χρήσεως 2000 δρχ. 16.423.888

Χρεωστικό υπόλοιπο 31.12.2000 δρχ. 27.123.353

Επισημαίνουμε ότι, η εταιρεία έχει ελεγχθεί φορολογικά μέχρι και τη χρήση 1998 και επομένως οι φορολογικές της υποχρεώσεις των δύο τελευταίων χρήσεων δεν έχουν καταστεί οριστικές.

18. **Διαθέσιμα**

Η Εταιρεία καλύπτει όλες τις προϋποθέσεις που προβλέπονται από τις διατάξεις του Ν. 2166/1993 για τη μετατροπή της σε Ανώνυμη Εταιρεία.

Δηλαδή:

α) Τηρεί βιβλία Γ΄ κατηγορίας του Κ.Β.Σ. (Π.Δ. 186/1992)

β) Εχει συντάξει περισσότερους της μίας χρήσεως Ισολογισμούς.

γ) Το Μετοχικό Κεφάλαιο, της από τη μετατροπή προερχόμενης Ανώνυμης Εταιρείας, υπερβαίνει το από το Ν.2579/1998 καθοριζόμενο ελάχιστο ύψος των εκατό εκατομμυρίων δραχμών.

Επιθυμούμε να σας γνωρίσουμε ότι είμαστε πρόθυμοι να παράσχουμε προς τις Δημόσιες αρχές, που θα δοθεί η παρούσα έκθεση, κάθε πρόσθετη διευκρίνιση σχετικά με τα στοιχεία του Ισολογισμού της 31.12.2000 που αναλύσαμε και σχολιάσαμε παραπάνω.

Με τιμή

GENERAL CERTIFICATE

By virtue of the provisions of Codified Law 2190/20 and L. 3419/2005 still in force and of the Ministerial Decisions issued by delegation of the above Law, and, as per the records of the General Commercial Register Service (ΓΕΜΗ Service) of the Chamber of Larissa concerning the Company with the name: "KARKANIAS-ENVIRONMENTAL TECHNOLOGY S.A.", short-named: KARKANIAS, which has its Registered Office in the Larissa Municipality and which is registered at the ΓΕΜΗ Service with No: 26564640000,
we hereby certify the following:

1. The above Company was registered in the ΓΕΜΗ Service on 10.09.2012. Since then, the Company's Articles of Association have been modified twice with the following codes (ΚΑΚ):

Date of Registration	Registration Code (ΚΑΚ)
25/06/2014	213207
18/08/2016	728878

The formation of the Company and any modifications of the Company's Articles of Association which occurred before the registration of the Company in ΓΕΜΗ are presented in the attached document of the Regional Unit of Larissa, Directorate of Development, with Number 58/10-01-2014.

2. We also certify that:
   a. The Duration of the Company's operation has not ended yet.
   b. We have not received any decision of the Company's General Assembly aiming to the Company's solution or liquidation.
   c. Our Service has not received any petition, claim or Court's Decision demanding the dissolution of the Company, the appointment or replacement of a liquidator or co-liquidator, the forced receivership or the special liquidation

3. According to the Company's Articles of Association, the Company's shares are as follows:

Type of Shares	Nominal value	Total Number of shares
Nominal, Ordinary	4.05 Euro	332,460

GEORGIOS KARKANIAS
PRESIDENT
03/12/18

4. Furthermore, pursuant to Art. 6 par. 2 and Art. 11 par. 5 of L.3419/2005, and Art.8 of L.3588/2007, **no decision** to file a petition for bankruptcy or conciliation has been submitted to our Service. In addition, **no petition** for bankruptcy or conciliation has been filed before the competent Court of Justice.

Note: The above paragraph (concerning the bankruptcy, conciliation and creditors' payment) **does not substitute the certificate issued by the Bankruptcy Register of the Court of First Instance,** where all entities filing for bankruptcy or conciliation are registered, pursuant to Par. 3, Art. 8 of L.3588/2007 still in force.

This certificate is issued upon request of KARKANIAS ENVIRONMENTAL TECHNOLOGY S.A. for the Company's legal intents and purposes exclusively.

COMMUNICATION

concerning the registration of new data of the Public Limited Company named **„KARKANIAS ENVIRONMENTAL TECHNOLOGY S.A."** in the General Commercial Register (ΓΕΜΗ).

Today, **the 20th of December 2016**, there have been registered in the General Commercial Register the following data of the Public Limited Company named **KARKANIAS ENVIRONMENTAL TECHNOLOGY S.A.** with ΓΕΜΗ Number: 26564640000 [former Register Number of Public Limited Companies (M.A.E.) 48779/31/B/01/12]:

a) The Decision of the General Assembly of the Company's Shareholders dated 14/12/2016 (KAK Code: **861643**), which elected the new Board of Directors of the Company.

b) The Minutes of the Company's Board of Directors dated 14/12/2016 (KAK Code: **861644**), which prove that the new Board of Directors elected by the above General Assembly has been formed as follows:

GEORGIOS KARKANIAS, son of APOSTOLOS, resident of Larissa at 3, Farmaki Street, GR-41222, holder of the Hellenic ID card No: AK 407117 and the Tax ID No: 117333686 (A' Public Finance Service of Larissa): **Chairman**

CHRISTOS KARKANIAS, son of APOSTOLOS, resident of Larissa at 3, Farmaki Street, GR-41222, holder of the Hellenic ID card No: AM 363854 and the Tax ID No: 140445508 (A' Public Finance Service of Larissa): **Vice-Chairman**

VASILIKI KARKANIA, daughter of APOSTOLOS, resident of Larissa at 3, Farmaki Street, GR-41222, holder of the Hellenic ID card No: AK 407175 and the Tax ID No: 128996162 (A' Public Finance Service of Larissa): **Managing Director**

STAMATIA KARKANIA, daughter of CHRISTOS, resident of Larissa at 3, Farmaki Street, GR-41222, holder of the Hellenic ID Card No: AK 407174 and the Tax ID No: 063983574 (A' Public Finance Service of Larissa): **Member**

The Term of Office of the above Board of Directors ends on 13/12/2021.

c) The Board has granted the right to represent and bind the Company to the following persons:

REPRESENTATION

The rights to represent and bind the Company have been granted to the following persons:

GEORGIOS KARKANIAS
PRESIDENT

l 23/12/16

OFFICIAL TRANSLATION FROM THE GREEK LANGUAGE

REPRESENTATION OF THE COMPANY

According to the relevant Article of Association, the Board of Directors entrusts Mr. Georgios Karkanias, Chairman, Mr. Christos Karkanias, Vice-Chairman, Ms Vasiliki Karkania, Managing Director, and Ms Stamatia Karkania, member of the Board, with the entirety of the rights described in the said Article.

In addition, the Board entrusts all of its Members with the right to represent the Company *separately or in common* before any Public Tender and before any Tender held by Bodies who are governed by the Public or Private Law, no matter the place and the object of the Tender.

SIGNATURE RIGHTS

Furthermore, according to the same Article, the Board grants unanimously to Mr. Georgios Karkanias, Chairman, Mr. Christos Karkanias, Vice-Chairman, Ms Vasiliki Karkania, Managing Director, and Ms Stamatia Karkania, member of the Board, the right to represent and bind the Company with their signature only, which shall be put separately under the Company's stamp for actions such as:

a) To collect money and pay cheques.
b) To withdraw money, dividend coupons and interest coupons.
c) To issue and endorse cheques.
d) To issue, accept, endorse and pay in advance bills of exchange and promissory notes.
e) To receive Bills of Lading.
f) To open guaranteed credits.
g) To collect bills of lading with guaranteed payments in advance.
h) To enter into contracts for loans and credits.
i) To receive the loans and use the credits.
j) To grant collateral security on movable assets and take it back.
k) To grant collateral security on immovable assets.
l) To issue letters of guarantee for the Company, or to exempt the Company from these letters.
m) To guarantee for a third party.
n) To issue letters of guarantee for a third party.
o) To rent and use safe deposit boxes and to end this rental.
p) To make any type of transaction concerning the Company
q) To appoint an attorney, who shall have the power to
    a. Withdraw money from all bank accounts of the Company
    b. To replace and represent the Chairman, the Vice-Chairman, the Managing Director and the member, if needed.
    c. To purchase any real property.

REPORT OF THE INDEPENDENT CERTIFIED PUBLIC ACCOUNTANT – AUDITOR
To the Shareholders of "KARKANIAS ENVIRONMENTAL TECHNOLOGY S.A."

FINANCIAL STATEMENTS REPORT

We have audited the above Financial Statements of **"KARKANIAS ENVIRONMENTAL TECHNOLOGY S.A."**, consisting of the balance sheet of December 31st, 2014, the income statement and the appropriation account for the year ended on the same date, as well as the related appendix.

RESPONSIBILITY OF THE ADMINISTRATION CONCERNING THE FINANCIAL STATEMENTS

The Company's Administration is responsible for drafting and presenting reasonably the financial statements according to the Accounting Standards set in the Greek General Chart of Accounts and the provisions of Articles 42a to 43c of Codified Law 2190/1920. The Administration is also responsible for taking all necessary internal measures in order to draft the financial statements accurately, with no essential inaccuracies resulting from fraud or error.

AUDITOR'S REPONSIBILITY

Our responsibility is to audit these financial statements and state our opinion. We conducted our audit in accordance with the International Standards on Auditing, which force us to comply with the professional ethics, and to draft and conduct the audit in order to obtain reasonable assurance that these financial statements do not include any essential inaccuracy. The audit consists of all necessary procedures that provide us with the audit documentation for the amounts and the information included in the financial statements. The necessary audit procedures are chosen by the auditor, including the risk assessments of any essential inaccuracy found in the financial statements that results from fraud or error. During these risk assessments, the auditor checks on the internal measures concerning the drafting and reasonable presentation of the company's financial statements in order to design the audit procedures that are suitable for the specific company. S/he does not intend to state an opinion concerning the efficiency of the Company's internal measures. The audit also includes the suitability of the accounting methods and principles used, as well as the rationality of the Administration's estimations along with the evaluation of the overall presentation of financial statements. We believe that the audit documentation collected so far is sufficient and proper for stating our opinion.

BASE FOR OPINION WITH RESERVATIONS

AUDIT'S RESULTS

1. In the Assets accounts entitled: D-II-1 "Clients", D-II-3a "Receivable Cheques" and D-II-5a "Short-term receivables from participation in joint ventures", there have been included overdue receivables and receivables in dispute of about 310.000,00 € in total; we believe that the Company should have included a provision of equal amount to cover the losses resulting from the non liquidation of these receivables. The absence of this required provision is a deviation from the Accounting Principles, pursuant to Codified L. 2190/1920 and the Greek

GEORGIOS KARKANIAS
PRESIDENT

General Chart of Accounts; as a result, the value of the aforementioned accounts and the shareholder's equity is increased by 310.000 €, and the income statements of corporate years 2014 and 2013 are increased by 32.000€ and 278.000 € respectively.

2. The account entitled "Participations in other undertakings" of 561.414,27 € illustrates the acquisition cost of the Company's participation in Joint Ventures, whose financial statements are not audited by Certified Accountants – Auditors. It was not possible for us to obtain reasonable assurance during our audit and, consequently, we keep our reservations as to the correct valuation of these participations and their possible consequences in the Shareholders' Equity and the income statements of corporate years 2014 and 2013.
3. By way of derogation of the Accounting Principles provided by the Greek Law (L. 2190/1920) and the Greek General Chart of Accounts, there is no provision for severance pay. On December 31st, 2014, the total sum of this non-included provision amounts to 18.000,00 € approximately. Consequently, the balance sheet lacks of provisions of 18.000,00 €, the shareholders' equity is increased by 18.000,00 € and the income statement of year 2014 and of year 2013 are also increased by 6.000,00 € and 12.000,00 €, respectively.
4. The participations income of 7.705,37 € results from the Company's Joint Ventures, whose financial statements are not audited by Certified Accountants – Auditors. It was not possible for us to obtain reasonable assurance during our audit as to this amount.
5. The tax liabilities of the Company have not been inspected by the competent Tax Authorities for the years 2009 to 2014. Consequently, the tax results of these corporate years are not defined yet. The Company has not estimated the additional taxes and increments that will probably be imposed in a future Tax Inspection, and it has not included a provision for this potential liability as well. It was not possible for us to obtain reasonable assurance during our audit as to the amount of this potential provision.

OPINION WITH RESERVATIONS

In our opinion, except from the consequences of the issues No 1,3 and the possible consequences of the issues No 2,4,5 raised in the previous paragraph ("Base for Opinion with Reservations"), the aforementioned financial statements present reasonably and essentially the financial position of "**KARKANIAS ENVIRONMENTAL TECHNOLOGY S.A"** as at December 31st 2014 as well as the financial performance for the year that ended that date, according to the Accounting Standards set in the Greek General Chart of Accounts and the provisions of Art. 42a to 43c of L. 2190/1920.

REPORT ON OTHER LEGAL AND REGULATORY ISSUES

a) We have verified the compliance and the consistency of the content of the Board of Directors' Report with the aforementioned financial statements, pursuant to Articles 43a and 37 of Codified L. 2190/1920.
b) The non-distribution of the shareholders'dividends is subjected to the Ordinary General Assembly of the Shareholders; the Decision shall be taken with the quorum and majority of voting needed, pursuant to the Greek Law.

Athens, June 2nd, 2015.

REPORT OF THE BOARD OF DIRECTORS OF THE PUBLIC LIMITED COMPANY

"KARKANIAS ENVIRONMENTAL TECHNOLOGY S.A."

GEMI No (General Commercial Register No): 026564640000

Reg. No for Public Limited Companies: 48779/031/B/2001/0012

TO THE ANNUAL ORDINARY GENERAL ASSEMBLY

OF THE COMPANY'S SHAREHOLDERS

FOR THE YEAR 2015

Dear shareholders,

Pursuant to the Greek Law and the Company's Articles of Association, we hereby present to you the activity of the Company for the year ended on 31.12.2015, as well as the Company's perspectives for the current year.

A. PROGRESS OF THE COMPANY'S WORKS

During the year ended on 31/12/2015 and despite the extremely difficult conditions of the Greek economy, our Company has increased its turnover.

The company's turnover for the year ended increased to 4.405.564,01€ compared to 3.339.263,47€ of the previous year. The Gross Profits amounted to 626.882,24€ compared to 563.342,66€ of the previous management period and the gross profit margin was reduced to 14,23% on the sales, compared to 16.87% of the previous year. The reason for this reduction was the need to lower the prices because of the market's competition.

The net profits of the year amounted to 588.586,46€.

The Board of Directors suggests that the above profits should be carried forward to the next year, after extracting the Ordinary Reserve as required by Law, in order to protect the cash flow of the Company.

The suggested Appropriation of profits is as follows:

1. Ordinary Reserve	€29.521,82
2. Profit carried forward	€559.064,64

B. ECONOMIC STATUS OF THE COMPANY

The balance sheet of the Company, which is attached herein, presents the real economic status of our Company on 31.12.2015.

GEORGIOS KARKANIAS
PRESIDENT

03/12/18

The economic status of the Company is positive compared to the previous year due to the efforts of the Administration to preserve the profitability of the Company despite the existing competition.

a. Statistical picture of the company

i. **Ratios of Economic structure**

	2015	2014
1.1 Current Assets/ Total assets	78,79%	69,24%
1.2 Shareholders' equity / Total liabilities	165,95%	188,96%
1.3 Shareholders' equity / Fixed assets	294,21%	212,62%
1.4 Current assets / Short-term liabilities	209,85%	200,51%
1.5 Working capital / Current assets	52,35%	50,13%
1.6 Fixed assets / Total asset	21,21%	30,76%

ii. **Ratios of Efficiency and Return**

	2015	2014
2.1 Operating results / Sales turnover	13,36%	0,56%
2.2 Net income statement (before taxes) / Shareholders' equity	32,47%	4,38%
2.3 Gross income / Sales turnover	14,23%	16,87%
2.4 Sales turnover / Shareholders' equity	168,79%	158,52%
2.5 EBITDA / interest paid	1379,73%	224,28%

C. PROVISIONS FOR THE COMPANY'S FUTURE

In the current year, the Company presents significant increase of its turnover due to the efforts of the Administration to maintain the Company's status. The Administration of the Company will make any effort to achieve the goals set so that its turnover reaches the levels of the previous year and even exceeds them.

D. FIXED ASSETS

The appendix with the financial statements of the year ended on 31.12.2015 presents with details the movement of the Company's fixed assets (purchases – sales – reductions and depreciations for the year ended on 31.12.2015 and it is attached herein.

The depreciations of all fixed assets have been calculated by virtue of L.4308/2014 and par.24 of L.4172/2013.

E. REAL ESTATE OF THE COMPANY

The Company's real estate from the previous years is the following:

a. A 400,00m^2 building in the Industrial Zone of Larissa
b. A 2.221,00m^2 building in the Industrial Zone of Larissa
c. Land of 2.335,00m^2 total surface in the land region of the Community of Makrychori which is inside the boundaries of the Industrial Zone of Larissa
d. Land of 4.541,00m^2 total surface in the land region of the Community of Makrychori which is inside the boundaries of the Industrial Zone of Larissa

GEORGIOS KARKANIAS
PRESIDENT

03/12/18

e. Land of 6.994,00m^2 total surface in the land region of the Community of Makrychori which is inside the boundaries of the Industrial Zone of Larissa
f. Land of 3.994,00m^2 total surface in the land region of the Kilkis Municipality

F. SECURITIES

The Company does not possess any Securities.

G. EXCHANGE AND BRANCHES

The Company does not possess any exchange or branches.

H. BASIC ACCOUNTING PRINCIPLES

The balance sheet of the current year as well as the attached income statement abides with the Accounting Principles set in the Greek Accounting Standards:

1. The fixed assets were valued according to their purchase price, which has been increased due to additions and betterments and decreased because of the depreciations required by Law, which were calculated according to the provisions of L.4308/2014 and par. 24 of L.4172/2013.
2. There was no need to make provisions for the devaluation of the Company's assets.
3. The inventory of the products, finished or partly-finished, has been valued at the lowest value per kind, which was measured between their acquisition cost (historic value) and their net liquid value. The rest of the inventory has been valued at the lowest price per kind, between their purchase price (historic cost) and the current purchase price the closing date of the balance sheet.
   The average purchase price of the entire inventory is always defined by using the method of the weighted average-cost.
4. The Company has made a provision of €18.706,83 for losses from doubtful debts.

The appendix of the Company which is attached in the financial statements and the present report gives all necessary information and clarifications required by the Greek Accounting Standards.

I. SIGNIFICANT LOSSES

There are no significant losses of the Company.

J. FINANCIAL RISK MANAGEMENT

a) Credit risk

The Company does not face significant credit risk. The wholesale sales which cover 100% of the Company's total sales are addressed mostly to customers with low risk of losses and more precisely to the Greek public sector.

b) Cash flow risk

The cash flow risk is low due to the credit policy of the Company.

c) Cash flow risks and risk of fair value changes because of interest rate changes.

GEORGIOS KARKANIAS
PRESIDENT

03/12/18

The Company's lending is under control.

d) Inventory risk

The Company takes all the necessary and suitable measures to minimize the risk of losing its inventory from natural disasters, thefts etc.

K. INFORMATION ABOUT IMPORTANT FACTS FROM THE END OF THE YEAR UNTIL TODAY.

Except from those mentioned in the report, there are no subsequent facts affecting the future of the Company.

To conclude, we invite you, the Company's shareholders, to:

1. Approve the balance sheet and the income statement of the year ended on 31.12.2015.

2. To release us and the certified auditors from every responsibility concerning the activities of the year ended on 31.12.2015, as required by the Law and the Company's Articles of Association.

Larissa, April 30th, 2016.

The Company's Board of Directors

03/12/18

Report of the Independent Certified Public Accountant – Auditor

To the Shareholders of "Karkanias Environmental Technology S.A."

FINANCIAL STATEMENTS AUDIT REPORT

We have audited the above Financial Statements of "**KARKANIAS ENVIRONMENTAL TECHNOLOGY S.A.**", consisting of the balance sheet of December 31st, 2015, the income statement and the appropriation account for the year ended on the same date, as well as the related appendix.

Responsibility of the administration concerning the financial statements. The Company's Administration is responsible for drafting and presenting reasonably the financial statements according to the Hellenic Accounting Standards. The Administration is also responsible for taking all necessary internal measures in order to draft the financial statements accurately, with no essential inaccuracies resulting from fraud or error.

AUDITOR'S REPONSIBILITY

Our responsibility is to audit these financial statements and state our opinion. We conducted our audit in accordance with the International Standards on Auditing, which force us to comply with the professional ethics, and to draft and conduct the audit in order to obtain reasonable assurance that these financial statements do not include any essential inaccuracy. The audit consists of all necessary procedures that provide us with the audit documentation for the amounts and the information included in the financial statements. The necessary audit procedures are chosen by the auditor, including the risk assessments of any essential inaccuracy found in the financial statements that results from fraud or error. During these risk assessments, the auditor checks on the internal measures concerning the drafting and reasonable presentation of the company's financial statements in order to design the audit procedures that are suitable for the specific company. S/he does not intend to state an opinion concerning the efficiency of the Company's internal measures. The audit also includes the suitability of the accounting methods and principles used, as well as the rationality of the Administration's estimations along with the evaluation of the overall presentation of financial statements.

We believe that the audit documentation collected so far is sufficient and proper for stating our opinion.

Base for opinion with reservations

Audit's results

1. In the accounts of the commercial receivables from clients and the advance payments there have been included overdue receivables from the previous year of about 585.000,00 €; the write-down was estimated at 146.000,00€ approximately , but there is still a remainder of almost 439.000,00€. The lack of this necessary write-down is a deviation from the Accounting Principles set in the Greek General Chart of Accounts; as a result, the value of the aforementioned accounts and the shareholder's equity is increased by 439.000,00 € approximately, and the income statements of corporate years 2015 and 2014 are increased by 2.000,00€ and 32.000,00 € respectively.
2. The account entitled "Participations in other undertakings" illustrates the acquisition cost of the Company's participation in Joint Ventures, whose financial statements are not audited by Certified Accountants – Auditors. It was not possible for us to obtain information concerning the fair value of

GEORGIOS KARKANIAS
PRESIDENT

03/12/18

these participations during our audit and, consequently, we keep our reservations as to the correct valuation of these participations and their possible consequences in the Shareholders' Equity and the income statements of corporate years 2015 and 2014.

3. By way of derogation of the Accounting Principles set in the Greek General Chart of Accounts, there is no provision for severance pay. On December 31st, 2015, the total sum of this non-included provision amounts to 12.000,00 € approximately. Consequently, the balance sheet lacks of provisions of 12.000,00 €, the shareholders' equity is increased by 12.000,00 € and the income statement of year 2015 are also decreased by 6.000,00 € approximately.
4. The tax liabilities of the Company have not been inspected by the competent Tax Authorities for the years 2009 to 2015. Consequently, the tax results of these corporate years have not been finalized yet. The Company has not estimated the additional taxes and increments that will probably be imposed in a future Tax Inspection, and it has not included a provision for this potential liability as well. It was not possible for us to obtain reasonable assurance during our audit as to the amount of this potential provision.

Opinion with reservations

In our opinion, except from the possible consequences of the issues raised in the previous paragraph ("Base for Opinion with Reservations"), the above financial statements present reasonably and essentially the financial position of **"KARKANIAS ENVIRONMENTAL TECHNOLOGY S.A"** as at December 31st 2015, as well as the financial performance for the year that ended that date, according to the Hellenic Accounting Standards.

Other issues

The financial statements of the Company named **"KARKANIAS ENVIRONMENTAL TECHNOLOGY S.A."** for the corporate year ended on December 31st, 2014, have been audited by a different Certified Public Accountant – Auditor who expressed his opinion with reservations on 02/06/2015 concerning the financial statements of the previous corporate year, because of a) lack of provision for doubtful receivables b) insufficient estimation of the account named "Participations in other undertakings", c) lack of provision for severance pay, d) failing to obtain reasonable audit assurance concerning the "Participations and investments income", and because of d) lack of tax provision for corporate years 2009-2014 which had not been inspected by the competent Tax Authorities.

Report on other legal and regulatory issues

We have verified the compliance and the consistency of the content of the Board of Directors' Report with the above financial statements pursuant to Codified L. 2190/1920.

Thessaloniki, 17/05/2016.

APPENDIX (NOTES) ON THE FINANCIAL STATEMENTS

OF KARKANIAS ENVIRONMENTAL TECHNOLOGY S.A.

ON DECEMBER 31ST 2015

as required by Art. 29 of L.4308/2014

a) GENERAL INFORMATION ABOUT THE COMPANY (par. 3, Art. 29) [1]

1. Commercial Name: KARKANIAS ENVIRONMENTAL TECHNOLOGY S.A.
2. Legal Form: Public Limited Company *(Société Anonyme)*
3. Reporting Period: 01/01/2015 – 31/12/2015
4. Registered Seat: Industrial Zone of Larissa
5. Reg. No of Public Limited Companies: 48779/031/B/2001/0012
6. General Commercial Register [GEMI] No: 026564640000
7. The Company operates in a going concern status.
8. The Company belongs to the entities described in par. 2(a) of Art. 1 and it is classified to the category of the small entities described in Art. 2 of L.4308/2014.
9. The financial statements which are attached herein have been prepared in full compliance with L.4308/2014.
10. The amounts of the financial statements are expressed in euro (€), which is also the functional currency of the Company.

b) FACTORS AFFECTING THE GOING CONCERN OF THE COMPANY (par. 4, Art. 29)

The Company has conducted the relevant assessment and it has not discovered any factors that may affect the Company's status as a going concern.

c) ACCOUNTING POLICIES (par. 5, Art. 29)

In order to monitor the additional elements of the financial statements, the Company applies the following accounting policies:

1. The owner-occupied estates are measured at their acquisition costs minus the depreciations and the impairment losses, when it is deemed that these impairment losses are permanent. The annual depreciation coefficient for these elements is 4%, which reflects their expected useful life.
2. The estate investments are measured at their acquisition costs minus the depreciations and the impairment losses, when it is deemed that these impairment losses are permanent. The annual depreciation coefficient for these elements is 4%, which reflects their expected useful life.
3. The rest of the tangible assets are measured at their acquisition costs minus the depreciations and the impairment losses, when it is deemed that these impairment losses are permanent. The annual depreciation coefficient for these elements, which reflects their expected useful life, is presented in the following table:

No	Description	Depreciation coefficient
1	Mechanical Equipment	10%
2	Transportation equipment (passenger cars and freight wagons)	16% -12%
3	PC equipment	20%
4	Other equipment	10%

GEORGIOS KARKANIAS
PRESIDENT

03/12/18

4. The biological assets are measured at their acquisition costs minus the depreciations and the impairment losses, when it is deemed that these impairment losses are permanent. The depreciation coefficient for these elements is 10% and it reflects their expected useful life which is estimated at 10 years.
5. The rest of the fixed tangible assets are deleted when they are sold or when the Company does not expect any future economic profits from their use or sale.
6. The intangible assets are recognized initially at their acquisition cost. Afterwards:
    a. the intangible assets with limited useful life are measured at their acquisition costs minus the depreciations and the impairment losses, when it is deemed that these impairment losses are permanent. The depreciation of intangible assets with predefined time of use shall take place within this time period. The assets whose time of use is not predefined conventionally are depreciated based on their expected useful life.
    b. The intangible assets with unlimited useful life or whose useful life cannot be defined in a credible way are measured at their acquisition cost minus the depreciations (depreciation coefficient: 10%) and minus the impairment losses, when it is deemed that these impairment losses are permanent.
7. The investments in joint ventures, affiliated or subsidiary undertakings, as well as the rest participations are measured at their acquisition cost minus the impairment losses when it is deemed that these losses are permanent. The dividends from these investments are recognized as income in the income statement of the year of their approval by the competent bodies.
8. The rest of the fixed financial assets ("loans and receivables" and "debit titles") are measured at their acquisition cost minus the impairment losses, when it is deemed that these losses are permanent.
9. At the appropriation of the tangible, intangible and financial assets, the balance between the book value and the appropriation value is recognized as profit/loss in the income statement.
10. Every type of inventory (finished and partly finished products, merchandise, raw materials, biological inventory) is measured at its lowest value, between the acquisition value and the net realizable value. The acquisition cost of the inventory is defined by the method of the weighted average cost. The loss which results from measuring the inventory at their net realizable value, when this value is lower than the acquisition cost, is recognized in the impairment losses and burdens cost of sales on the operating results table. In case of particularly increased impairment losses of the inventory, the related amounts are included in the item entitled "Assets impairment (net amount)" on the Income statement table so as to guarantee the fair representation.
11. The commercial receivables and the rest of the receivables are measured at their acquisition cost minus the estimated impairment losses.
12. The advance payments are recognized initially at their acquisition cost (paid amounts). Afterwards, they are measured at their initial acquisition cost minus the used amounts and the impairment losses, in compliance with the accrued principle.
13. The rest and non financial assets are recognized initially at their acquisition cost. Afterwards, they are measured at their lowest value between the acquisition cost and their deprival value.
14. The items of the equity are recognized and measured at their notional amounts, which have been either received or paid. The cost which is directly linked to an item of the equity is recorded by extracting this item from the equity, provided that this is important for the financial statements; otherwise, this amount is recognized as an expense for the year concerned.

GEORGIOS KARKANIAS
PRESIDENT

03/12/18

15. The provisions for post-employment benefits are recognized and measured at their notional amounts set by the Law at the date of the balance sheet.
16. The rest of the provisions are recognized and measured at the notional amount which shall be claimed for their settlement.
17. The financial liabilities are recognized and measured at their notional amounts.
18. The government grants concerning the assets are recognized initially as liabilities for the period they were received or for the period they were finally approved and it became certain that they would be received. The government grants are recognized with the amounts received or finally approved. Afterwards, these grants are depreciated as they are transferred to the Income statement as an income for the same period and with the same way they were transferred to the results of the book value of the item granted. The government grants which concern the expenses are recognized initially as liabilities for the period they were received or for the period they were approved and it became certain that they would be received. The government grants which concern the expenses are transferred to the income statement as an income for the period these granted expenses burden the results.
19. The non financial liabilities are recognized and measured at their notional amount which is expected to be received for their settlement.
20. Any balances resulting from the revaluation or the settlement of the non financial liabilities, including the provisions, are recognized as profits or losses for the period they occur.
21. The current income tax is recognized as an expense in the income statement and it consists of the income tax set by the Tax Legislation, the balances from the Tax audit and any surcharges.
22. The income from the sales of goods are recognized when: a) the essential risks and benefits linked to their ownership are transferred to the purchaser, b) the goods are accepted by the purchaser and c) the economic benefits from this exchange can be measured with credibility and their inflow in the entity is highly probable. The income from the provision of services is recognized based on the completion percentage, provided that the inflow of the exchange's economic benefit is highly probable; otherwise, and in case there is no essential consequence in the financial statements, any income from the provision of services is measured with the method of the completed convention. The income from the interests is calculated with the method of the accruals principle. The dividends or the income from the Company's participation in the equity of other entities are recognized as income when they are approved by the competent body which decides on their appropriation. The rights are recognized as income based on the related conventional terms.
23. The expenses are recognized in the Income statement based on the accruals principle.
24. The exchanges in a foreign currency are converted, at their initial recognition, into the currency used in the balance sheet of the entity, based on the exchange rate of the date the exchange At the end of the reporting period: a) the monetary items are converted with the closing exchange rate of the date of the balance sheet, b) the non-monetary items which are expressed in a foreign currency and which are measured at their acquisition cost are converted into the currency used in the balance sheet with the exchange rate of the initial recognition. Any differences in the exchange rates which result from the settlement of the monetary items or from their conversion into an exchange rate different than the one used at the initial recognition or than the one used at the preparation of previous financial statements, are recognized in the Income statement of the period they occur.
25. Any changes in the accounting policies and any corrections of errors are recognized retrospectively by correcting:

GEORGIOS KARKANIAS
PRESIDENT

03/12/18

a. The book values of the assets, liabilities and equity concerning the cumulative impact of this change at the beginning or ending of the comparative and current reporting period, and
b. The income, profits, expenses and losses concerning the impact on the accounting numbers of the comparative period.

There has been no need to proceed in such corrections for the current reporting period.

26. Any changes in the accounting estimations are recognized in the period they occur or affect and in future periods, depending on the case. These changes are not recognized retrospectively.
27. The values of assets and liabilities at the date of the balance sheet are adjusted if there is objective evidence that adjusting events have occurred after this date and they impose the adjustment. These adjustments shall take place only until the date of signature of the financial statements by the Board of Directors. The non-adjusting events which occur after the date of the balance sheet are included in the notes of the financial statements, if they are of significant importance.
28. The errors are corrected once they are detected.

D. DEVIATIONS FROM THE LAW IN ORDER TO ACHIEVE THE FAIR PRESENTATION OF THE FINANCIAL STATEMENTS (par. 6, Art. 29)

In the reporting year there has been no need for such a deviation.

E. RELATIONS OF AN ASSET OR LIABILITY WITH MORE THAN ONE ITEMS OF THE BALANCE SHEET (par. 7, Art. 29)

There are no assets or liabilities related to more than one items of the balance sheet.

F. ANALYSES OF THE ITEMS OF THE FINANCIAL STATEMENTS

2. Measurement of assets at their fair value (par. 10, Art. 29).
Not applicable.

3. Securities on the Company's assets (par. 13, Art. 29)
Not applicable.

4. Provisions.
A provision of the amount of €18.706,83 has been made, which burdened the other expenses and losses included in the income statement and it concerns the loss by the doubtful debt of the entity's client named "Emery Winery S.A."
The rest of the provisions for doubtful debts of the previous period which amounts to €127.505,21 concerns the loss by a doubtful debt of the client named "Domotechniki S.A.".

5. Long-term liabilities which become due in more than five years (par. 14, Art. 29)
Not applicable

6. Financial commitments, guarantees or contingencies (contingent liabilities) which are not included in the balance sheet (par. 16, Art. 29)
There are letters of guarantee in the National Bank of Greece, in the Piraeus Bank and the ΤΣΜΕΔΕ[1] which amount to €62.033,93, €727.607,88 and €1.444.593,40 respectively.

7. Short-term liabilities
The commercial liabilities consist of the following:

[1] (Translator's Note): Greek Pension Fund for Engineers and Public Works' Contractors.

Percentage	**43,12%**	**35,35%**

The total turnover of the joint ventures the Company participates in amounts to €3.637.279,14, and the proportion of KARKANIAS ENVIRONMENTAL TECHNOLOGY S.A., based on its participation rate, amounts to €1.959.213,57. We underline the fact that the above mentioned turnover of joint ventures is not included in the Income statement of the Company, as there is no obligation to draft consolidated financial statements.

9. Interests charged to the assets' value for the reporting period (par. 18, Art. 29)

Not applicable.

10. Average number of employees and costs (par. 23a, Art. 29)

The average number of the Company's employees for the year 2015 was 23 (19 employees in the previous year).

The costs of the above employees are presented in the following table:

Wages and costs of employees	**2015**	**2014**
Wages of salaried employees	139.285,88	112.283,78
Wages of daily workers	207.314,85	251.799,81
Social security and benefits	122.034,86	127.498,98
Cost of staff training	265,99	700,00

GEORGIOS KARKANIAS
PRESIDENT

03/12/18

Total	468.901,58	492.282,57

11. Advance payments and credits granted to the members of the Board of Directors (par. 25, Art. 29)
Not applicable.

G. METHOD OF TRANSITION TO THE GREEK ACCOUNTING STANDARDS (ΕΛΠ) AND CONSEQUENCES UPON THE ITEMS OF THE STATEMENTS.

No full retrospective adjustment of the balance sheet items of the Company occurred at the date of transition (01.01.2014), in compliance with par.2, Art. 37 of the Law; the acquisition values are fair. As a result and in compliance with par. 3(a1) of Art.37 of the Law, the Company has adopted the book values of the balance sheet at the date of transition as deemed cost of the related items, according to the Greek Accounting Standards.

It is particularly noted that:

The balance sheet item entitled as "Other intangibles" refers to the "Other installation expenses" item, based on the provisions of the previous Accounting Framework. The related item is not recognized in the Accounting Framework of the Greek Accounting Standards; however, it shall be included in the balance sheet by virtue of par. 5 of Art. 37 of the Law, until it is totally depreciated by the annual coefficient of 10% on the acquisition value.

The items of the year 2014 (comparative year) have been rearranged, in relation to the statements of the year 2014, for comparison reasons:

1. In the income statement of the year 2014 and especially in the Appropriation results of the year 2014 appears the expense of €73.513,18 which concerned an income tax.
2. The total equity of the Balance sheet on 31.12.2014 appears reduced by €2.342,21 and it concerns government grants which are included in the long-term liabilities by virtue of the new Accounting Framework.
3. The account of the rest of provisions which amounts to 127.505,21 and which concerns a provision for doubtful debts is presented as a reduction from the item of the commercial receivables

Independent Chartered Accountant Report
To the Shareholders of the Company "KARKANIAS ENVIRONMENTAL TECHNOLOGY S.A."

Audit Report on the Financial Statements

We examined the attached financial statements of the Company**"KARKANIAS ENVIRONMENTAL TECHNOLOGY S.A."**, which comprise the balance sheet from December 31st 2016 and the results statements of the use ending on that date, as well as the relative annex.

Management responsibility for the Financial Statements

The management bears the responsibility for the compilation and reasonable presentation of those financial statements according to the Greek Accounting Standards, as well for those internal safeguards that the management determines as necessary in order to make possible the compilation of financial statements free from essential inaccuracy, due either to fraud or error.

Auditor's Responsibility

Our responsibility is to express an opinion about those financial statements based on our audit. We executed our audit according to the Audit International Standards, integrated in the Greek Legislation (GG/B72848/23.10.2012). These standards demand the observance of ethics rules, as well as the planning and execution of the audit aiming to the acquisition of reasonable assurance about whether the financial statements are free from essential inaccuracy.
The audit includes the execution of procedures for the acquisition of auditing evidence regarding the amounts and the notifications in the financial statements. The selected procedures are based on the auditor's judgement including the assessment of the financial statements essential inaccuracy risks due either to fraud or error. During the execution of these risk assessments, the auditor examines the internal safeguards relating to the compilation and reasonable presentation of the financial statements of the company, aiming to the planning of auditing procedures adequate for the circumstances, but not for the goal of expressing an opinion about the efficacy of the internal safeguards of the company. The audit also includes the assessment of the adequacy of the accounting principles and methods used and the reason of the assessment that took place by the management, as well as the assessment of the total presentation of the financial statements.
We believe that the auditing conclusions we have gathered are sufficient and adequate for the institution of establishment of our auditing opinion.

Base for Opinion with Reserve

From our audit the following have resulted:
1) In the accounts of the Current Assets are also included the demands in delay of total amount around € 597 thous., for which the executed depreciation of an amount of around € 146 thous. remains by around € 451 thous. The non execution of the necessary depreciation constitutes a deviation from the accounting principles, provided by the Greek Accounting Standards, resulting to the value of the Current Assets and own capitals appearing increased by about € 451 thous.
2) In the account "Participations in subsidiaries, affiliated and trusts", of an amount of around € 458 thous, the value of acquisition of the participations of the company in trusts is depicted, the financial statements of which are not audited by Chartered Accountants. Data regarding the reasonable value of these participations have not been taken into consideration and therefore

GEORGIOS KARKANIAS
PRESIDENT

03/12/18

we reserve the right to correctly evaluate them and the possible consequences on the results, for the closed and previous use and the company's own capitals.

- By dispensation of the accounting principles, provided by the Greek Accounting Standards, no prediction is formed for personnel compensation because of exit from service. At December 31st 2016, the total amount of the non formed prediction rises to about € 14 thous., resulting the predictions for provisions to the employees appearing decreased by about € 14 thous. and the own capitals appearing equally increased.
- The tax obligations of the company have not been examined by the tax authorities for the uses from 2009 to 2016. Therefore the tax results of these have not be made definite. The company has not advanced to an assessment of additional taxes and the accretion that will possibly be attributed to a future tax control and has not formed a relative predition for this possible obligation. From our audit, we have not acquired a reasonable assurance regarding the assessment of the amount of the possibly necessary prediction.

Opinion with Reserve

In our estimation, except the consequences of the issues mentioned in paragraph 'Base for Opinion with Reserve', the attached financial statements reasonably present, in every essential respect, the financial state of the Company "KARKANIAS ENVIRONMENTAL TECHNOLOGY S.A." at December 31st 2016 and its financial performance for the use that ended on this date, according to the Greek Accounting Standards.

Report on Other Legal and Normative Requirements

Taking into consideration that the management has the responsibility for the compilation of the Management Report of the Board of Directors, by application of the provisions of paragraph 5 article 2 (part B) of the L. 4336/2015, we note that:

A) In our estimation the Board of Directors Management Report has been compiled according to the legal requirements in force of article 43a of the Cod. L. 2190/1920 and its content corresponds to the attached financial statements of the use that ended on 31/12/2016.

B) Based on the opinion we acquired during our audit, for the company "KARKANIAS ENVIRONMENTAL TECHNOLOGY S.A." and its environment, we have not detected any essential inaccuracies in the Board of Directors Management Report.

Annex (notes) on the financial statements of December 31st 2016

(According to the provided by article 29 of the L. 4308/2014).

1. **Information relative with the Company (par. 3 article 29)**

A) Denomination KARKANIAS ENVIRONMENTAL TECHNOLOGY S.A.

B) Legal type: Anonymous society

C) Reference period: 1.1.2016 - 31.12.2016

D) Seat address: Industrial Area of Larissa, P.C. 41.004

E) G.E.MI.: 026564640000

F) The management estimates that the acceptance of the continuing activity is indicated for the compilation of the financial statements

G) The company belongs to the "small entity" category

H) The management declares that the financial statements have been compiled in full accordance with the L. 4308/2014

I) The amounts of the financial statements are expressed in euros, which constitutes the operating currency of the Company

J) The amounts have been rounded except if mentioned differently

The above yearly financial statements of 31/12/2016 were approved by the Board of Directors of the company on 27/06/2017, refer to the corporate use 1.1-31.12.2016 and have been compiled according to the Greek Accounting Standards (GAS) L. 4308/2014.

The present Financial Statements have been compiled based on the principle of history cost, the principle of activity continuation and are accordant to the provisions of the L. 4308/2014 Greek Accounting Standards. The compilation of the Financial Statements according to the L. 4308/2014 Greek Accounting Standards, necessitates the use of analytical accounting assessments and judgements in the application procedure of the accounting policies, which affect the remaining property elements and obligations, the notification of possible demands and obligations during the date of the Financial Statements as well as the presented income and expenses amounts during the period under investigation. Despite the fact that the assessments are based on the best possible knowledge of the company's Management, the real results may finally differ from these assessments. According to the L. 4308/2014 Greek Accounting Standards, the companies are obliged to present comparative Financial Statements, at least for one period.

2. **Factors that put the perspective of the Company as continuing activity at risk (par. 4 article 29)**

The Company executed a relative assessment and has not detected factors that set its perspective as continuing activity at risk.

GEORGIOS KARKANIAS
PRESIDENT

03/12/18

3. **Accounting policies and assessments (par. 5 article 29)**

The compilation of the financial statements presupposes the execution of a judgement and assessments by the management, which affect the application of the accounting policies, the recognized amounts of income, expenses, assets, obligations and notifications. These assessments and acceptances are based on the past experience and other factors considered reasonable for the occasion. The real events however, may differ from these assessments. The assessments and the relative acceptances are continuously re-assessed.

The accounting assessments mainly take place for the calculation of the amortizations of fixed assets, the participations, the decrease of receivables, the predictions and the assessment of reasonable value if its application is selected.

3.1. Adopted accounting policies

The company applies the adopted accounting policies for the partial elements of the financial statements, in the framework of the basic principle of earnings.

3.1.1. Tangible fixed assets

3.1.2. a) Initial registration

The tangible fixed assets include the owner-occupied real estates, the investment real estates and the biological property initially recognized in the acquisition cost, which includes each expense necessary for the element to come in the present state or position or indented use.

In particular, the cost of the self supply of fixed assets, including the biological ones, includes the cost of raw materials, expendable supplies, work and other cost relating directly to the fixed asset in question. Furthermore, it includes a reasonable analogy of fixed and variable expenses indirectly relating to the self supplied fixed asset, to the grade that these amounts refer to the construction or production period. The company does not burden the cost of the self supplied fixed assets of long period of construction or production with interests of interest-bearing obligations to the corresponding part.

B) Subsequent assessment

Subsequently of the initial registration the fixed assets are assessed to the depreciable cost (initial acquisition cost, plus any subsequent expense that fulfils the definition of asset, minus the accumulated depreciations and impairment damages).

The depreciations of tangible assets are calculated with the stable method with the following depreciation coefficients, which reflect their estimated beneficial financial life:

s/n	Description	Depreciation Coefficient	Estimated financial life
(1)	Buidlings and technical works	4%	25 years
(2)	Mechanical equipment	10%	10 years
(3)	Transport means	16%	6 years
(4)	Transport means trucks	12%	8 years

GEORGIOS KARKANIAS
PRESIDENT

03/12/18

(5)	PC equipment	20%	5 years
(6)	Furniture and other equipment	10%	10 years
(7)	Biological assets	10%	10 years

A depreciation damage is recognized when it is estimated that the accounting value of the asset has surpassed its retrievable value.

The accounting values of the fixed assets of the Company are assessed for depreciation when there are indications that their accounting values are larger than the retrievable ones or when it is estimated that the depreciation damages are of permanent character. In this case, the retrievable value of the fixed assets is calculated and if the accounting values surpass the estimated retrievable value, the relative difference is recorded as depreciation damage in the results records.

C) Deletion

The tangible assets are deleted at their sale or if the Company does not expect future financial gains from their use or their sale.

3.1.3. Intangible fixed assets

The intangible fixed assets mainly include licenses, concessions, rights, software, trade names and other expenses of long-term depreciation.

The value of software includes the cost of software purchase as well as any other expense that has taken place in order to place them in operation, decreased by the amount of accumulated depreciations and possible impairment of their value. Important subsequent expenses are capitalized in accounting software when they increase their performance beyond their original specifications.

The intangible fixed assets are initially recognized in the acquisition cost.

Subsequently of the original recognition:

A) the intangible assets with limited beneficial financial life are admeasured to the acquisition cost minus the depreciations and minus the impairment damages, when it is estimated that these (impairment damages) are of permanent character. The depreciation of the intangible assets with conventionally determined time of use takes place within this time. For the assets without conventionally determined time of use, the depreciations take place according to their estimated financial life.

B) The intangible assets with unlimited beneficial financial life, or with beneficial financial life that cannot be reliably determined, are admeasured to the acquisition cost minus depreciations with impairment coefficient 10%, and minus impairment damages when it is estimated that these (impairment damages) are of permanent character.

3.1.3. Financial property

3.1.3.1. Participations

The participations are observed in the acquisition cost subject to impairment control of their value when there are indications or events that indicate that their accounting value may not my retrievable. Impairment damages are recorded when the accounting value of the participations exceeds their retrievable value. As retrievable value is considered the

GEORGIOS KARKANIAS
PRESIDENT

03/12/10

use value which is the present value of the expected future cash flow from the participation, in the next five years and their residual value at the end of the five years.

Dividends from the investments in question are recognized as income in the results, at the time they are approved by their competent instruments.

3.1.3.2. Other financial property

A) Initial registration

All the financial assets are initially recorded at the acquisition cost, namely, the cost needed for their acquisition. The acquisition cost includes the total of cash (or cash equivalents) or the reasonable value of other exchange provided for the acquisition, plus the purchase expenses.

B) Subsequent assessment

Subsequently of the initial recording, the financial assets are estimated at their acquisition cost (nominal amounts) minus possible impairment damages, except the interest bearing financial assets, which, when the amounts, their termination time or interest rate are important, are estimated at the depreciable cost with the method of real interest rate (or with the stable method).

Impairment damage results when the accounting value of the asset is higher from the amount that the entity estimates will recover from this asset.

The amount that the entity estimates that it will recover from a financial asset is higher from:

- The present value of the amount estimated it will be recovered from this asset, calculated with the use of the initial real interest rate
- Thereasonable value of the asset, decreased with the necessary sale cost.

The impairment damages are recorded in the results statement and reversed as profits in it, when the conditions that caused them stop existing. Reversal takes place up to the value the asset would have, if no impairment damage had been recorded.

The loans and receivables expressed in foreign currency are estimated with the exchange rate of the foreign currency during the balance sheet date. The relative currency differences are recorded in the results.

C) Deletion

A financial asset is deleted when and only the conventional rights expire on the cash flow of the asset or all the risks and benefits that result from the ownership of this asset are essentially transferred.

GEORGIOS KARKANIAS
PRESIDENT

03/12/18

3.1.4. Income tax

3.1.4.1. Current tax

The current income tax includes:

- The income tax resulting according to the provisions of each tax legislation in force.
- The income tax and the accretion resulting from the tax audit.

The differences of the tax audit, are recognized in the use result record, the use during which they are certified by the tax authorities and become accepted by the Company.

3.1.4.2. Deferred taxes

Deferred taxes result when there are temporary (reversible) differences between the accounting value and the tax base of balance sheet assets.

The company has not selected the recording of deferred taxes according to the paragraph 3 of article 23 of the L. 4308/2014.

3.1.5. Reserves

A) Initial registration

The reserves are initially recorded in the acquisition cost, which includes every expense necessary for each reserve element coming to the present state or position or indented use.

In particular, the cost of the self supply reserves, including the biological ones, includes the cost of raw materials, expendable supplies, work and other cost relating directly to the assets in question. Furthermore, it includes a reasonable analogy of fixed and variable expenses indirectly relating to the self supplied asset, to the grade that these amounts refer to the production period. The company does not burden the cost of the self supplied reserves of long period of construction or maturity with interests of interest-bearing obligations to the corresponding part.

B) Subsequent assessment

Subsequently of the initial recording, the reserves are estimated to the lowest price per kind between the acquisition cost and their net liquidation value. The reserve acquisition cost is determined with the method of the weighted average term or on each case with the first-in-first-out method. In the case of valuation in the net liquidable value, the impairment damage is recorded as the sold items cost, except if it is very important, and in that case it is integrated on the fund "impairment of assets".

3.1.6. Advance payments and other non financial assets

The expenses advance payments are initially recorded at the acquisition cost (paid amounts) and are subsequently estimated at the initial acquisition cost, minus the used amounts based on the principle of earned amounts and possible impairment damages. The impairment of the advance payment expenses refers to the case in which the receiver of the

GEORGIOS KARKANIAS
PRESIDENT

03/12/18

relative amount is in no position to fulfil the commitment he/she undertook or to return the remaining amount.

The other non financial assets are initially recorded in the acquisition cost and subsequently estimated at the lowest value between acquisition cost and retrievable value, namely the amount expected to be received.

The commercial receivables and other receivables are admeasured at the acquisition cost minus the estimated impairment damages.

3.1.7. Financial obligations

A) Initial recording and subsequent evaluation

The financial obligations, as much at the initial record, as subsequently, are estimated at their nominative amounts, except the ones of long-term termination, which are estimated on their depreciable cost with the method of real interest rate (or the stable method). The financial obligations expressed in foreign currency are estimated with the exchange rate of the foreign currency during the balance sheet date. The relative currency differences are recorded in the results.

B) Deletion

A financial obligation is deleted if and only when the conventional commitment is fulfilled, cancelled or terminated, namely, when the conventional commitment that created does not exist any more.

3.1.8. Non financial obligations

A) Initial recording and subsequent evaluation

The non financial obligations are initially recorded and subsequently estimated at their nominative cost expected to be demanded for their settlement. Differences that result either during their re-assessment, or during the settlement of the non financial obligations are recorded as profits or damages of the period in which they arise.

B) Deletion

A non financial obligation is deleted if and only when the conventional commitment is fulfilled, cancelled or terminated, namely, when the conventional commitment that created it does not exist anymore.

3.1.9. Predictions

The predictions are initially recorded and subsequently estimated on the nominative amount it is expected to be demanded for their settlement, except if their estimation in the present value of the amount expected to be demanded for their settlement has an important effect on the amounts of the financial records.

In particular, the possible obligations for provisions to employees after their exit of the service, as they result from the labour legislation (L. 2112/1920), are not recognized on the financial records of 31/12 but recorded when they become definite.

GEORGIOS KARKANDAS
PRESIDENT

03/12/18

3.1.10. State subsidiaries

The state subsidiaries referring to the assets are initially recognized as obligations for the period they are collected or the period when their approval becomes definite and certainty exists that they will be collected. The state subsidiaries are recognized with the amounts collected or definitely approved. Subsequent to the initial recognition, the state subsidiaries are depreciated with their transfer to the results as income, in the same period and in a way respective of the transfer in the results of the accounting value of the asset that was subsidized. The state subsidiaries referring to expenses are initially recognized as obligations for the period they are collected or the period when their approval becomes definite and certainty exists that they will be collected. The state subsidiaries referring to expenses are transferred to the results as income in the period in which the subsidized expenses bear on the results.

3.1.11. Income and expenses

The company records the income and the expenses, when they become earned.

In particular:

- The income from the sale of goods are recorded in the period in which they become earned and if all the following conditions are fulfilled:
  - ✓ The essential risks and benefits connected with their ownership are transferred to the buyer.
  - ✓ The goods become accepted by the buyer.
  - ✓ The financial benefits from the transaction can be estimated as reliable and their inflow in the entity can be considered very likely.
- The income from the provision of services and the constructing contracts are recorded with the method of completion percentage and if the inflow of the financial benefit of the transactions is considered very likely. Alternatively and when there is no essential consequence on the financial records, the income from the provision of services is admeasured with the method of complete contract.
- The income originating from the use of the entity's assets by third parties are recorded as follows:
  - ✓ The income from interest is considered based on the earned principle.
  - ✓ The dividends and income of similar nature from the participation in the net position of other entities when approved by the competent instrument that decided for their distribution.
  - ✓ The rights according to the relative conventional terms.
- The expenses are recognized in the results condition based of the earned principle.

3.1.12. Transactions in foreign currency

The transactions in foreign currency are transformed at the initial recognition to the currency in which the financial statements of the entity are compiled with the valid exchange rate during the transaction. At the end of each reference period: (a) the currency elements are transformed with the closing exchange rate at the date of the balance sheet, (b) the non currency elements expressed on foreign currency and admeasured at the acquisition cost, are transformed with

GEORGIOS KARKANTIAS
PRESIDENT

02/12/18

the exchange rate of the initial recognition. The currency differences arising from the settlement of currency elements or their transformation with different exchange rate from the exchange rate during the initial recognition or during the compilation of subsequent financial records, are recognized the results of the period in which they arise.

3.1.13. Net position elements

The net position funds are initially recorded and subsequently estimated at the nominative amounts that have been received or paid.

3.1.14. Potential assets and potential obligations

These assets refer to potential rights and commitments respectively, which arise from past events and their existence will be confirmed only if one or more uncertain future events take place or not, which are not fully under the control of the Company. These elements are notified in the notes of the financial statements.

3.1.15. Events after the balance sheet date

The values of assets and obligations at the date of the balance sheet are adjusted, if there is an objective indication that corrective events after this date enforce adjustment in their value. These adjustments take place for such events, until the date of approval of the financial statements by the Board of Directors. The non corrective, after the balance sheet date, events, are notified if they are important on the notes of the financial statements.

3.1.16. Important accounting assessments and admissions

The assessments and admissions are continuously assessed and based on the historical experience and on other factors, including the expected future events that, under the present conditions, are expected to take place.

3.2. Modification of accounting policies, modification of accounting assessments and correction of errors of previous periods

3.2.1. Modification of accounting policies

The modifications of accounting policies are recorded with retrospective reformulation of the financial statements of all the periods published together with the statements of the current period, in order to present comparable funds.

No need for such modification arose in the current period.

3.2.2 Modification of accounting assessments

The modifications of accounting assessments are recorded in the period, in which it is ascertained that they result and affect this period for future period, on each case. These modifications are not retrospectively recognized.

GEORGIOS KARKANIAS
PRESIDENT

03/12/18

3.2.3. Correction of errors of previous periods

The corrections of errors are recorded with the retrospective correction of financial statements of all the periods published together with the statements of the current period.

No error of previous period was detected in the present period.

4. Deviations from the provisions of the law in order to achieve a reasonable presentation of the Financial statements (par. 6 article 29)

When, in exceptional cases, the company deviates from the application of a provision of the law in order to fulfil the obligation of reasonable presentation of the financial statements, it notifies and adequately justifies this deviation.

No need for such deviation arose in the current period.

5. Relations of an asset or an obligation with more that one fund of the balance sheet (par. 7 article 29)

There are no assets or obligations relating to more than one fund of the balance sheet.

6. Fund analyses of financial statements

6.1 Information regarding the tangible, intangible and biological fixed assets (par. 8 article 29)

The information regarding the movement and accordance of the accounts of tangible assets are presented in the following tables

6.7. **Advance payments and credit to members of administrative, management and supervising instruments (par. 25 article 29)**

The company does not provide advance payments and credit to members of the Board.

6.8. **Use of the selection of paragraph 7 or paragraph 8 of article 16 of the law**

The company does not belong to the category of very small entities.

6.9. **Financial commitments, guarantees and potential obligations not appearing on the balance sheet (par. 16 article 29)**

A) Financial commitments

The Company has not drawn determinable contracts of operating leases regarding the leasing of real estate

B) Guarantees

The Company has not provided letters of guarantee to various third parties, analysis of which follows on the table below:

	31/12/2016	31/12/2015
Good work execution	156.176	789.642
Other guarantees to third parties	-	-
Total	156.176	789.442

C) Potential obligations

The tax obligations of the company have not been examined by the tax authorities for the uses from 2009 to 2016. Therefore the tax results of these uses have not be made definite. The company has not advanced to an assessment of additional taxes and the accretion that will possibly be attributed to a future tax control and has not formed a relative prediction for this possible obligation.

THE AUDIT FIRM

Certified Public
G.P. LICENSE R.A. 0107975AT CLASS

Independent Chartered Accountant Report
To the Shareholders of the Company "KARKANIAS ENVIRONMENTAL TECHNOLOGY S.A."

Audit Report on the Financial Statements

We examined the attached audited statements of the Company "KARKANIAS ENVIRONMENTAL TECHNOLOGY S.A.", which comprise the balance sheet from December 31st 2016 and the related statements of the use ending on that date, as well as the report of profit.

Management responsibility for the Financial Statements

The management bears the responsibility for the compilation and reasonable presentation of these financial statements according to the Greek Accounting Standards, as well for those internal safeguards that the management determines as necessary in order to make possible the compilation of financial statements free from essential inaccuracy, due either to fraud or error.

Auditor's Responsibility

Our responsibility is to express an opinion about these financial statements based on our audit. We executed our audit according to the Audit International Standards, integrated in the Greek legislation (ΟΔΔΠ/Φ54/8720 το 2012). These standards demand the observance of ethics rules, as well as the planning and execution of the audit aiming at the acquisition of reasonable assurance about whether the financial statements are free from essential inaccuracy.

The audit includes the execution of procedures for the acquisition of auditing evidence regarding the amounts and the publication in the financial statements. The selected procedures are based on the auditor's judgements including the assessment of the financial statements' essential inaccuracy risks due either to fraud or error. During the execution of these risk assessments, the auditor examines the internal safeguards relating to the composition and reasonable presentation of the financial statements of the company, aimed to the planning of auditing procedures adequate for the circumstances, but not for the goal of expressing an opinion about the efficacy of the internal safeguards of the company. The audit also includes the assessment of the adequacy of the accounting principles and methods used and the reason of the accounts estimates took place by the management, as well as the assessment of the total presentation of the financial statements.

We believe that the auditing conclusions we have gathered are sufficient and adequate for the execution of (presentation of our auditing opinion.

Basis for Opinion with Reserve

From our audit the following have resulted:

1) In the accounts of the current Assets are also included the amounts in delay of total amount around € 597 thous., for which the executed depreciation of an amount of around € 146 thous. remains as around € 451 thous. The non-execution of the necessary depreciation constitutes a deviation from the accounting principles, provided by the Greek Accounting Standards, resulting to the value of the Current assets and own capital's appearing increased by about € 451 thous.

3) In the account "Participations in subsidiaries, affiliates and other" of an amount of around € 456 thous. the value of acquisition of the participations of the company in shares is detected, the financial statements of which are not audited by Chartered Accountants. Data regarding the reasonable value of these participations have not been taken into consideration and therefore we reserve the right to correctly evaluate them and the possible consequences on the results, for the closed and previous, use and the company's own capital.

5) By dispensation of the accounting principles, provided by the Greek Accounting Standards, no provision is formed for personnel compensation because of exit from service. As December 31st 2016, the total amount of the non formed provision rises to about € 12 thous. resulting the provisions for provisions to the employees appearing decreased by about € 12 thous. and the own capital's appointed equity increased.

6) The tax obligations of the company have not been examined by the tax authorities for the years from 2008 to 2016. Therefore the tax results of these have not or more before. The company has not attended to an assessment of additional taxes and the accretion that will possibly be attributed to a future tax control and has not formed a reserve provision for the possible obligation. From our audit, we have not acquired a reasonable assurance regarding the assessment of the amount of the possibly necessary provision.

Opinion with Reserve

In our estimation, except the consequences of the issues mentioned in paragraph "Basis for Opinion with Reserve", the attached financial statements reasonably present, in every essential respect, the financial state of the Company "KARKANIAS ENVIRONMENTAL TECHNOLOGY S.A." at December 31st 2016 and its financial performance for the use that ended on that date, according to the Greek Accounting Standards.

Report on Other Legal and Supervising Requirements

Taking into consideration that the management has the responsibility for the compilation of the Management Report of the Board of Directors, in application of the provisions of paragraph 5 article 2 (part B) of the L. 4336/2015, we note that:

At our estimation the Board of Directors Management Report has been compiled according to the legal requirements in force of article 43a of the Cod. L. 2190/1920 and its contents corresponds to the attached financial statements of the use that ended on 31/12/2016.

Based on the opinion we acquired during our audit, for the company "KARKANIAS ENVIRONMENTAL TECHNOLOGY S.A." (and its environment), we have not detected any essential inaccuracies in the Board of Directors Management Report.

Έκθεση Ανεξάρτητου Ορκωτού Ελεγκτή Λογιστή
Προς τους Μετόχους της Εταιρείας «ΚΑΡΚΑΝΙΑΣ ΤΕΧΝΟΛΟΓΙΑ ΠΕΡΙΒΑΛΛΟΝΤΟΣ Α.Ε.»

Έκθεση Ελέγχου επί των Χρηματοοικονομικών Καταστάσεων

Ελέγξαμε τις συνημμένες χρηματοοικονομικές καταστάσεις της Εταιρείας **«ΚΑΡΚΑΝΙΑΣ ΤΕΧΝΟΛΟΓΙΑ ΠΕΡΙΒΑΛΛΟΝΤΟΣ Α.Ε.»**, οι οποίες αποτελούνται από τον ισολογισμό της 31ης Δεκεμβρίου 2016 και τις καταστάσεις αποτελεσμάτων της χρήσεως που έληξε την ημερομηνία αυτή, καθώς και το σχετικό προσάρτημα.

Ευθύνη της Διοίκησης για τις Χρηματοοικονομικές Καταστάσεις

Η διοίκηση έχει την ευθύνη για την κατάρτιση και εύλογη παρουσίαση αυτών των χρηματοοικονομικών καταστάσεων σύμφωνα με τα Ελληνικά Λογιστικά Πρότυπα, όπως και για εκείνες τις εσωτερικές δικλίδες που η διοίκηση καθορίζει ως απαραίτητες ώστε να καθίσταται δυνατή η κατάρτιση χρηματοοικονομικών καταστάσεων απαλλαγμένων από ουσιώδη ανακρίβεια, που οφείλεται είτε σε απάτη είτε σε λάθος.

Ευθύνη του Ελεγκτή

Η δική μας ευθύνη είναι να εκφράσουμε γνώμη επί αυτών των χρηματοοικονομικών καταστάσεων με βάση τον έλεγχό μας. Διενεργήσαμε τον έλεγχό μας σύμφωνα με τα Διεθνή Πρότυπα Ελέγχου, που έχουν ενσωματωθεί στην Ελληνική Νομοθεσία (ΦΕΚ/Β'/2848/23.10.2012). Τα πρότυπα αυτά απαιτούν να συμμορφωνόμαστε με κανόνες δεοντολογίας, καθώς και να σχεδιάζουμε και διενεργούμε τον έλεγχο με σκοπό την απόκτηση εύλογης διασφάλισης για το εάν οι χρηματοοικονομικές καταστάσεις είναι απαλλαγμένες από ουσιώδη ανακρίβεια.
Ο έλεγχος περιλαμβάνει τη διενέργεια διαδικασιών για την απόκτηση ελεγκτικών τεκμηρίων, σχετικά με το ποσό και τις γνωστοποιήσεις στις χρηματοοικονομικές καταστάσεις. Οι επιλεγόμενες διαδικασίες βασίζονται στην κρίση του ελεγκτή περιλαμβανομένης της εκτίμησης των κινδύνων ουσιώδους ανακρίβειας των χρηματοοικονομικών καταστάσεων, που οφείλεται είτε σε απάτη είτε σε λάθος. Κατά τη διενέργεια αυτών των εκτιμήσεων κινδύνου, ο ελεγκτής εξετάζει τις εσωτερικές δικλίδες που σχετίζονται με την κατάρτιση και εύλογη παρουσίαση των χρηματοοικονομικών καταστάσεων της εταιρείας, με σκοπό το σχεδιασμό ελεγκτικών διαδικασιών κατάλληλων για τις περιστάσεις, αλλά όχι με σκοπό την έκφραση γνώμης επί της αποτελεσματικότητας των εσωτερικών δικλίδων της εταιρείας. Ο έλεγχος περιλαμβάνει επίσης την αξιολόγηση της καταλληλότητας των λογιστικών αρχών και μεθόδων που χρησιμοποιήθηκαν και του εύλογου των εκτιμήσεων που έγιναν από τη διοίκηση, καθώς και αξιολόγηση της συνολικής παρουσίασης των χρηματοοικονομικών καταστάσεων.
Πιστεύουμε ότι τα ελεγκτικά τεκμήρια που έχουμε συγκεντρώσει είναι επαρκή και κατάλληλα για τη θεμελίωση της ελεγκτικής μας γνώμης.

Βάση για Γνώμη με Επιφύλαξη

Από τον έλεγχο μας προέκυψαν τα εξής:
1) Στους λογαριασμούς του Κυκλοφορούντος Ενεργητικού περιλαμβάνονται και απαιτήσεις σε καθυστέρηση, συνολικού ποσού € 597 χιλ. περίπου, για τις οποίες η διενεργηθείσα απομείωση ποσού € 146 χιλ. περίπου υπολείπεται της απαιτούμενης κατά € 451 χιλ. περίπου. Η μη διενέργεια της απαιτούμενης απομείωσης συνιστά παρέκκλιση από τις λογιστικές αρχές, που προβλέπονται από τα Ελληνικά Λογιστικά Πρότυπα, με συνέπεια, η αξία του Κυκλοφορούντος Ενεργητικού και τα ίδια κεφάλαια να εμφανίζονται αυξημένα κατά € 451 χιλ. περίπου.
2) Στο λογαριασμό «Συμμετοχές σε θυγατρικές, συγγενείς και κοινοπραξίες», ποσού € 458 χιλ. περίπου, απεικονίζεται η αξία κτήσης των συμμετοχών της εταιρείας σε κοινοπραξίες, οι χρηματοοικονομικές καταστάσεις των οποίων δεν ελέγχονται από Ορκωτούς Ελεγκτές Λογιστές. Δεν τέθηκαν υπόψη μας στοιχεία σχετικά με την εύλογη αξία των συμμετοχών αυτών και συνεπώς

GEORGIOS KARKANIAS
PRESIDENT

03/12/18

διατηρούμε επιφύλαξη για την ορθή αποτίμηση τους και τις ενδεχόμενες επιπτώσεις στα αποτελέσματα, για την κλειόμενη και την προηγούμενη χρήση καθώς και στα ίδια κεφάλαια της εταιρείας.
3) Κατά παρέκκλιση των λογιστικών αρχών, που προβλέπονται από τα Ελληνικά Λογιστικά Πρότυπα, δεν σχηματίζεται πρόβλεψη για αποζημίωση προσωπικού λόγω εξόδου από την υπηρεσία. Κατά την 31η Δεκεμβρίου 2016, το συνολικό ύψος της μη σχηματισθείσας πρόβλεψης ανέρχεται σε € 14 χιλ. περίπου, με συνέπεια οι προβλέψεις για παροχές σε εργαζομένους να εμφανίζονται μειωμένες κατά € 14 χιλ. περίπου και τα ίδια κεφάλαια να εμφανίζονται ισόποσα αυξημένα.
4) Οι φορολογικές υποχρεώσεις της εταιρίας δεν έχουν εξεταστεί από τις φορολογικές αρχές για τις χρήσεις από 2009 έως 2016. Ως εκ τούτου τα φορολογικά αποτελέσματα των χρήσεων αυτών δεν έχουν καταστεί οριστικά. Η εταιρία δεν έχει προβεί σε εκτίμηση των πρόσθετων φόρων και των προσαυξήσεων που πιθανόν να καταλογιστούν σε μελλοντικό φορολογικό έλεγχο και δεν έχει σχηματίσει σχετική πρόβλεψη για αυτή την ενδεχόμενη υποχρέωση. Από τον έλεγχό μας, δεν έχουμε αποκτήσει εύλογη διασφάλιση σχετικά με την εκτίμηση του ύψους της πρόβλεψης που τυχόν απαιτείται.

Γνώμη με Επιφύλαξη

Κατά τη γνώμη μας, εκτός από τις επιπτώσεις των θεμάτων που μνημονεύονται στην παράγραφο 'Βάση για Γνώμη με Επιφύλαξη', οι συνημμένες χρηματοοικονομικές καταστάσεις παρουσιάζουν εύλογα, από κάθε ουσιώδη άποψη, την οικονομική θέση της Εταιρείας «ΚΑΡΚΑΝΙΑΣ ΤΕΧΝΟΛΟΓΙΑ ΠΕΡΙΒΑΛΛΟΝΤΟΣ Α.Ε.» κατά την 31η Δεκεμβρίου 2016 και τη χρηματοοικονομική της επίδοση για τη χρήση που έληξε την ημερομηνία αυτή, σύμφωνα με τα Ελληνικά Λογιστικά Πρότυπα.

Έκθεση επί Άλλων Νομικών και Κανονιστικών Απαιτήσεων

Λαμβάνοντας υπόψη ότι η διοίκηση έχει την ευθύνη για την κατάρτιση της Έκθεσης Διαχείρισης του Διοικητικού Συμβουλίου, κατ' εφαρμογή των διατάξεων της παραγράφου 5 του άρθρου 2 (μέρος Β) του Ν. 4336/2015, σημειώνουμε ότι:
α) Κατά τη γνώμη μας η Έκθεση Διαχείρισης του Διοικητικού Συμβουλίου έχει καταρτισθεί σύμφωνα με τις ισχύουσες νομικές απαιτήσεις του άρθρου 43α του Κωδ. Ν. 2190/1920 και το περιεχόμενο αυτής αντιστοιχεί με τις συνημμένες χρηματοοικονομικές καταστάσεις της χρήσης που έληξε την 31/12/2016.
β) Με βάση τη γνώση που αποκτήσαμε κατά το έλεγχό μας, για την Εταιρεία «ΚΑΡΚΑΝΙΑΣ ΤΕΧΝΟΛΟΓΙΑ ΠΕΡΙΒΑΛΛΟΝΤΟΣ Α.Ε.» και το περιβάλλον της, δεν έχουμε εντοπίσει ουσιώδεις ανακρίβειες στην Έκθεση Διαχείρισης του Διοικητικού της Συμβουλίου.

Προσάρτημα (σημειώσεις) επί των χρηματοοικονομικών καταστάσεωντης31ης Δεκεμβρίου 2016(Σύμφωνα με όσα προβλέπονται στο άρθρο 29 του Ν.4308/2014)

1. Πληροφορίες σχετικές με την Εταιρεία (παρ. 3 άρθρου 29)

α)Επωνυμία: ΚΑΡΚΑΝΙΑΣ ΤΕΧΝΟΛΟΓΙΑ ΠΕΡΙΒΑΛΛΟΝΤΟΣ Α.Ε.

β) Νομικός τύπος: Ανώνυμη εταιρεία

γ) Περίοδος αναφοράς: 1.1.2016 - 31.12.2016

δ) Διεύθυνση της έδρας: Βιομηχανική Περιοχή Λάρισας, Τ.Κ. 41004

ε) ΓΕ.ΜΗ.: 026564640000

στ) Η διοίκηση εκτιμά ότι η παραδοχή της συνεχιζόμενης δραστηριότητας είναι ενδεδειγμένη για την κατάρτιση των χρηματοοικονομικών καταστάσεων

ζ) Η εταιρεία ανήκει στην κατηγορία «μικρήοντότητα»

η) Η διοίκηση δηλώνει ότι οι χρηματοοικονομικές καταστάσεις έχουν καταρτιστεί σε πλήρη συμφωνία με τον Ν. 4308/2014

θ) Τα ποσά των χρηματοοικονομικών καταστάσεων εκφράζονται σε ευρώ, που αποτελεί το λειτουργικό νόμισμα της Εταιρείας

ι) Τα ποσά δεν έχουν στρογγυλοποιηθεί εκτός αν αναφέρεται διαφορετικά

Οι ανωτέρω ετήσιες χρηματοοικονομικές καταστάσεις της 31/12/2016 εγκρίθηκαν από το Διοικητικό Συμβούλιο της εταιρείας την 27/06/2017, αφορούν την εταιρική χρήση 1.1-31.12.2016 και έχουν συνταχθεί σύμφωνα με τα Ελληνικά Λογιστικά Πρότυπα (ΕΛΠ) Ν.4308/2014.

Οι παρούσες Χρηματοοικονομικές Καταστάσεις έχουν συνταχθεί με βάση την αρχή του ιστορικού κόστους, την αρχή της συνέχισης της δραστηριότητας και είναι σύμφωνες με τις διατάξεις του Ν. 4308/2014 Ελληνικά Λογιστικά Πρότυπα. Η κατάρτιση των Χρηματοοικονομικών Καταστάσεων σύμφωνα με το Ν. 4308/2014 Ελληνικά Λογιστικά Πρότυπα, απαιτεί τη χρήση αναλυτικών λογιστικών εκτιμήσεων και κρίσεων στη διαδικασία εφαρμογής των λογιστικών πολιτικών, που επηρεάζουν τα υπόλοιπα των περιουσιακών στοιχείων και υποχρεώσεων, τη γνωστοποίηση ενδεχομένων απαιτήσεων και υποχρεώσεων κατά την ημερομηνία των Χρηματοοικονομικών Καταστάσεων καθώς και τα παρουσιαζόμενα ποσά εσόδων και εξόδων κατά τις υπό εξέταση περιόδους. Παρά το γεγονός ότι οι εκτιμήσεις βασίζονται στην καλύτερη δυνατή γνώση της Διοίκησης της εταιρίας, τα πραγματικά αποτελέσματα ενδέχεται τελικά να διαφέρουν από τις εκτιμήσεις αυτές. Βάσει του Ν. 4308/2014 Ελληνικά Λογιστικά Πρότυπα, οι εταιρίες είναι υποχρεωμένες να παρουσιάσουν συγκριτικές Χρηματοοικονομικές Καταστάσεις, τουλάχιστον για μία περίοδο.

2. Παράγοντες που θέτουν σε κίνδυνο την προοπτική της Εταιρείας ως συνεχιζόμενης δραστηριότητας(παρ. 4 άρθρου 29)

Η Εταιρεία διενήργησε σχετική αξιολόγηση και δεν εντόπισε παράγοντες που θέτουν σε κίνδυνο την προοπτική της ως συνεχιζόμενη δραστηριότητα.

GEORGIOS KARKANIAS
PRESIDENT

03/12/18

3. Λογιστικές πολιτικές και εκτιμήσεις (παρ. 5 άρθρου 29)

Η σύνταξη των οικονομικών καταστάσεων προϋποθέτει την άσκηση κρίσης και την διενέργεια εκτιμήσεων από την διοίκηση, τα οποία επηρεάζουν την εφαρμογή των λογιστικών πολιτικών, τα αναγνωριζόμενα ποσά των εσόδων, εξόδων, περιουσιακών στοιχείων, υποχρεώσεων και γνωστοποιήσεων. Αυτές οι εκτιμήσεις και παραδοχές βασίζονται στην εμπειρία του παρελθόντος και σε λοιπούς παράγοντες που θεωρείται ότι είναι εύλογα για τις περιστάσεις. Τα πραγματικά γεγονότα όμως, μπορεί να διαφέρουν από αυτές τις εκτιμήσεις. Οι εκτιμήσεις και οι σχετικές παραδοχές επανεκτιμούνται σε συνεχή βάση.

Οι λογιστικές εκτιμήσεις γίνονται κυρίως για τον υπολογισμό των αποσβέσεων των παγίων, τις συμμετοχές, την απομείωση των απαιτήσεων, τις προβλέψεις και την εκτίμηση της εύλογης αξίας εφόσον επιλέγεται η εφαρμογή της.

3.1. Ακολουθούμενες λογιστικές πολιτικές

Η εταιρεία για τα επιμέρους στοιχεία των χρηματοοικονομικών καταστάσεων εφαρμόζει τις ακόλουθες λογιστικές πολιτικές, στα πλαίσια της βασικής αρχής του δουλευμένου.

3.1.1. Ενσώματα πάγια περιουσιακά στοιχεία

α) Αρχική καταχώριση

Τα ενσώματα πάγια περιουσιακά στοιχεία, περιλαμβάνουν τα ιδιοχρησιμοποιούμενα ακίνητα, τα επενδυτικά ακίνητα και τα βιολογικά περιουσιακά στοιχείαναγνωρίζονται αρχικά στο κόστος κτήσεως, το οποίο περιλαμβάνει κάθε δαπάνη που απαιτείται για να έλθει το στοιχείο στην παρούσα κατάσταση ή θέση ή επιδιωκόμενη χρήση.

Ειδικότερα το κόστος των ιδιοπαραγόμενων πάγιων στοιχείων, συμπεριλαμβανομένων των βιολογικών, περιλαμβάνει το κοστος πρωτων υλών, αναλώσιμων υλικών, εργασίας και άλλο κόστος που σχετίζεται άμεσα με το εν λόγω πάγιο στοιχείο. Επιπλέον περιλαμβάνει μια εύλογη αναλογία σταθερών και μεταβλητών εξόδων που σχετίζονται έμμεσα με το ιδιοπαραγόμενο πάγιο στοιχείο, στο βαθμό που το ποσά αυτά αναφέρονται στην περίοδο κατασκευής ή παραγωγής. Η εταιρεία δεν επιβαρύνει το κόστος των ιδιοπαραγόμενων πάγιων στοιχείων μακράς περιόδου κατασκευής ή παραγωγής με τόκους εντόκων υποχρεώσεων κατά το μέρος που αναλογούν σε αυτό.

β) Μεταγενέστερη αποτίμηση

Μεταγενέστερα της αρχικής καταχωρίσεως τα πάγια περιουσιακά στοιχεία αποτιμούνται στο αποσβέσιμο κόστος (αρχικό κόστος κτήσεως, πλέον κάθε μεταγενέστερη δαπάνη που πληροί τον ορισμό του περιουσιακού στοιχείου, μείον σωρευμένες αποσβέσεις και ζημίες απομειώσεως).

Οι αποσβέσεις των ενσωμάτων παγίων υπολογίζονται με την σταθερή μέθοδο με τους ακόλουθους συντελεστές απόσβεσης, οι οποίοι αντανακλούν την εκτιμώμενη ωφέλιμη οικονομική ζωή τους:

α/α	Περιγραφή	Συντελεστής απόσβεσης	Εκτιμώμενη οικονομική ζωή
(1)	Κτίρια και τεχνικά έργα	4%	25 έτη
(2)	Μηχανολογικός εξοπλισμός	10%	10 έτη
(3)	Μεταφορικά μέσα επιβατικά	16%	6 έτη
(4)	Μεταφορικά μέσα φορτηγά	12%	8 έτη

GEORGIOS KARKANTAS
PRESIDENT

03/12/18

(5)	Εξοπλισμός Η/Υ	20%	5 έτη
(6)	Έπιπλα και λοιπός εξοπλισμός	10%	10 έτη
(7)	Βιολογικά περιουσιακά στοιχεία	10%	10 έτη

Ζημία απομειώσεωςαναγνωρίζεται όταν εκτιμάται ότι η λογιστική αξία του στοιχείου έχει υπερβεί την ανακτήσιμη αξία του.

Οι λογιστικές αξίες των πάγιων περιουσιακών στοιχείων της Εταιρείας ελέγχονται για απομείωση όταν υπάρχουν ενδείξεις ότι οι λογιστικές αξίες τους είναι μεγαλύτερες από τις ανακτήσιμες ή όταν κρίνεται ότι οι ζημίες απομείωσης είναι μόνιμου χαρακτήρα. Στην περίπτωση αυτή υπολογίζεται η ανακτήσιμη αξία των πάγιων περιουσιακών στοιχείων και αν οι λογιστικές αξίες υπερβαίνουν την εκτιμώμενη ανακτήσιμη αξία, η σχετική διαφορά καταχωρίζεται ως ζημία απομείωσης στην κατάσταση αποτελεσμάτων.

γ) Διαγραφή

Τα ενσώματα πάγια στοιχεία διαγράφονται κατά την πώλησή τους ή αν η Εταιρεία δεν αναμένει μελλοντικά οικονομικά οφέλη από τη χρησιμοποίησή τους ή την πώλησή τους.

3.1.2. Άυλα πάγια περιουσιακά στοιχεία

Τα άυλα πάγια περιουσιακά στοιχεία περιλαμβάνουν κυρίως άδειες, παραχωρήσεις, δικαιώματα, λογισμικά προγράμματα, εμπορικές επωνυμίες, και λοιπά έξοδα πολυετούς απόσβεσης.

Η αξία των λογισμικών προγραμμάτων περιλαμβάνει το κόστος αγοράς λογισμικών προγραμμάτων καθώς και κάθε δαπάνη που έχει πραγματοποιηθεί προκειμένου αυτά να τεθούν σε καθεστώς λειτουργίας, μειωμένη κατά το ποσό των σωρευμένων αποσβέσεων και τυχόν απομειώσεων της αξίας τους. Σημαντικές μεταγενέστερες δαπάνες κεφαλαιοποιούνται στα λογισμικά προγράμματα όταν προσαυξάνουν την απόδοση τους πέραν των αρχικών προδιαγραφών.

Τα άυλα πάγια περιουσιακά στοιχεία αναγνωρίζονται αρχικά στο κόστος κτήσης.

Μεταγενέστερα της αρχικής αναγνώρισης:

α) τα άυλα στοιχεία με περιορισμένη ωφέλιμη οικονομική ζωή επιμετρώνται στο κόστος κτήσης μείον αποσβέσεις και μείον ζημίες απομείωσης, όταν κρίνεται ότι αυτές (ζημίες απομείωσης) είναι μόνιμου χαρακτήρα. Η απόσβεση των άυλων στοιχείων με συμβατικά καθοριζόμενο χρόνο χρήσης γίνεται εντός του χρόνου αυτού. Για τα στοιχεία χωρίς συμβατικά καθοριζόμενο χρόνο χρήσης, οι αποσβέσεις διενεργούνται με βάση την εκτιμώμενη ωφέλιμη οικονομική ζωή τους.

β) Τα άυλα στοιχεία με απεριόριστη ωφέλιμη οικονομική ζωή, ή με ωφέλιμη οικονομική ζωή που δεν μπορεί να προσδιοριστεί αξιόπιστα, επιμετρώνται στο κόστος κτήσης μείον αποσβέσεις με συντελεστή απόσβεσης 10%, και μείον ζημίες απομείωσης όταν κρίνεται ότι αυτές (ζημίες απομείωσης) είναι μόνιμου χαρακτήρα.

3.1.3. Χρηματοοικονομικά περιουσιακά στοιχεία

3.1.3.1. Συμμετοχές

Οι συμμετοχές παρακολουθούνται στο κόστος κτήσεως υποκείμενες σε έλεγχο απομειώσεως της αξίας τους όταν υπάρχουν ενδείξεις ή γεγονότα που υποδεικνύουν ότι η λογιστική αξία τους ενδέχεται να μην είναι ανακτήσιμη. Ζημίες απομειώσεωςκαταχωρίζονται όταν η λογιστική αξία των συμμετοχών

GEORGIOS [illegible]AS
PRESIDENT

03/12/18

υπερβαίνει την ανακτήσιμη αξία τους. Ως ανακτήσιμη αξία θεωρείται η αξία χρήσεως που είναι η παρούσα αξία των αναμενόμενων μελλοντικών χρηματοροών από την συμμετοχή, στην επόμενη πενταετία και της υπολειμματικής της αξίας στο τέλος της πενταετίας.

Μερίσματα από τις εν λόγω επενδύσεις αναγνωρίζονται ως έσοδα στα αποτελέσματα, κατά το χρόνο που εγκρίνονται από τα αρμόδια όργανα αυτών.

3.1.3.2. Λοιπά χρηματοοικονομικά περιουσιακά στοιχεία

α) Αρχική καταχώριση

Όλα τα χρηματοοικονομικά περιουσιακά στοιχεία καταχωρίζονται αρχικά στο κόστος κτήσεως, δηλαδή στο κόστος που απαιτήθηκε για την απόκτηση τους. Το κόστος κτήσεως περιλαμβάνει το σύνολο των ταμειακών διαθεσίμων (ή ταμειακών ισοδύναμων) ή την εύλογη αξία άλλου ανταλλάγματος που διατέθηκε για την απόκτηση, πλέον δαπάνες αγοράς.

β) Μεταγενέστερη αποτίμηση

Μεταγενέστερα της αρχικής καταχωρίσεως, τα χρηματοοικονομικά περιουσιακά στοιχεία αποτιμούνται στο κόστος κτήσεώς τους (ονομαστικά ποσά) μείον τυχόν ζημίες απομειώσεως, εκτός από τα έντοκα χρηματοοικονομικά περιουσιακά στοιχεία, τα οποία, όταν τα ποσά, ο χρόνος λήξεώς τους ή το επιτόκιο είναι σημαντικά, αποτιμούνται στο αποσβέσιμο κόστος με τη μέθοδο του πραγματικού επιτοκίου (ή με τη σταθερή μέθοδο).

Ζημία απομειώσεως προκύπτει όταν η λογιστική αξία του στοιχείου είναι μεγαλύτερη από το ποσό που η οντότητα εκτιμά ότι θα ανακτήσει από το στοιχείο αυτό.

Το ποσό που η οντότητα εκτιμά ότι θα ανακτήσει από ένα χρηματοοικονομικό περιουσιακό στοιχείο είναι το μεγαλύτερο από:

- Την παρούσα αξία του ποσού που εκτιμάται ότι θα ληφθεί από το περιουσιακό στοιχείο, υπολογιζόμενη με τη χρήση του αρχικού πραγματικού επιτοκίου.
- Την εύλογη αξία του στοιχείου, μειωμένη με το απαιτούμενο κόστος πωλήσεως.

Οι ζημίες απομειώσεως καταχωρίζονται στην κατάσταση αποτελεσμάτων και αναστρέφονται ως κέρδη σε αυτή, όταν οι συνθήκες που τις προκάλεσαν πάψουν να υφίστανται. Αναστροφή γίνεται μέχρι της αξίας που θα είχε το στοιχείο, εάν δεν είχε καταχωριστεί ζημία απομειώσεως.

Τα δάνεια και οι απαιτήσεις που εκφράζονται σε ξένο νόμισμα αποτιμούνται με την ισοτιμία του ξένου νομίσματος κατά την ημερομηνία του ισολογισμού. Οι σχετικές συναλλαγματικές διαφορές καταχωρίζονται στα αποτελέσματα.

γ) Διαγραφή

Ένα χρηματοοικονομικό περιουσιακό στοιχείο διαγράφεται όταν και μόνον όταν εκπνεύσουν τα συμβατικά δικαιώματα επί των ταμειακών ροών του στοιχείου ή μεταβιβαστούν ουσιαστικά όλοι οι κίνδυνοι και τα οφέλη που προκύπτουν από την κυριότητα του στοιχείου αυτού.

GEORGIOS KARKANIAS

3.1.4. Φόροι εισοδήματος

3.1.4.1. Τρέχων φόρος

Ο τρέχων φόρος εισοδήματος περιλαμβάνει:

- Τον φόρο εισοδήματος που προκύπτει με βάση τις διατάξεις της εκάστοτε ισχύουσας φορολογικής νομοθεσίας,
- Τον φόρο εισοδήματος και τις προσαυξήσεις που προκύπτουν από τον φορολογικό έλεγχο.

Οι διαφορές του φορολονικού ελέγχου, αναγνωρίζονται στην κατάσταση αποτελεσμάτων της χρήσεως, τη χρήση κατά την οποία βεβαιώνονται από τις φορολογικές αρχές και γίνονται αποδεκτές από την Εταιρεία.

3.1.4.2. Αναβαλλόμενοι φόροι

Αναβαλλόμενοι φόροι προκύπτουν όταν υπάρχουν προσωρινές (αναστρέψιμες) διαφορές μεταξύ λογιστικής αξίας και φορολογικής βάσεως στοιχείων του ισολογισμού.

Η εταιρεία δεν έχει επιλέξει την καταχώριση αναβαλλόμενων φόρων σύμφωνα με την παράγραφο 3 του άρθρου 23 του Ν.4308/2014.

3.1.5. Αποθέματα

α) Αρχική καταχώριση

Τα αποθέματα καταχωρίζονται αρχικά στο κόστος κτήσεως, το οποίο περιλαμβάνει κάθε δαπάνη που απαιτείται για να έλθει κάθε στοιχείο των αποθεμάτων στην παρούσα κατάσταση ή θέση ή επιδιωκόμενη χρήση.

Ειδικότερα το κόστος των ιδιοπαραγομένων αποθεμάτων, συμπεριλαμβανομένων των βιολογικών, περιλαμβάνει το κόστος πρώτων υλών, αναλώσιμων υλικών, εργασίας και άλλο κόστος που σχετίζεται άμεσα με τα εν λόγω στοιχεία. Επιπλέον περιλαμβάνει μια εύλογη αναλογία σταθερών και μεταβλητών εξόδων που σχετίζονται άμεσα με το ιδιοπαραγόμενο στοιχείο, στο βαθμό που τα ποσά αυτά αναφέρονται στην περίοδο παραγωγής. Η εταιρεία δεν επιβαρύνει το κόστος των ιδιοπαραγόμενων αποθεμάτων μακράς περιόδου παραγωγής ή ωριμάνσεως με τόκους εντόκων υποχρεώσεων κατά το μέρος που αναλογούν σε αυτά.

β) Μεταγενέστερη αποτίμηση

Μεταγενέστερα της αρχικής καταχωρίσεως, τα αποθέματααποτιμούνται στην κατ' είδος χαμηλότερη τιμή μεταξύ του κόστους κτήσεως και της καθαρής ρευστοποιήσιμης αξίας τους. Το κόστος κτήσεως των αποθεμάτων προσδιορίζεται με την μέθοδο του μέσου σταθμικού όρου, ή κατά περίπτωση με τη μέθοδο της σειράς εξαντλήσεως (F.I.F.O.). Στην περίπτωση αποτιμήσεως στην καθαρή ρευστοποιήσιμη αξία, η ζημία απομειώσεως καταχωρίζεται ως κόστος πωληθέντων, εκτός αν είναι σημαντική, οπότε ενσωματώνεται στο κονδύλι καπομειώσεις περιουσιακών στοιχείωνι.

3.1.6. Προκαταβολές και λοιπά μη χρηματοοικονομικά περιουσιακά στοιχεία

Οι προκαταβολές δαπανών καταχωρίζονται αρχικά στο κόστος κτήσεως (καταβαλλόμενα ποσά) και αποτιμούνται μεταγενέστερα στο αρχικό κόστος κτήσεως, μείον τα χρησιμοποιηθέντα ποσά βάσει της αρχής του δουλευμένου και τυχόν ζημίες απομειώσεως. Η απομείωση των προκαταβολών δαπανών

GEORGIOS KARKANTAS
PRESIDENT

03/12/18

αναφέρεται στην περίπτωση στην οποία ο λήπτης του σχετικού ποσού δεν είναι σε θέση ούτε να εκπληρώσει την δέσμευση που ανέλαβε ούτε να επιστρέψει το υπόλοιπο του ποσού.

Τα λοιπά μη χρηματοοικονομικά περιουσιακά στοιχεία καταχωρίζονται αρχικά στο κόστος κτήσεως και αποτιμούνται μεταγενέστερα στη χαμηλότερη αξία μεταξύ κόστους κτήσεως και ανακτήσιμης αξίας, δηλαδή του ποσού που αναμένεται να ληφθεί.

Οι εμπορικές απαιτήσεις και οι λοιπές απαιτήσεις επιμετρώνται στο κόστος κτήσης μείον τις εκτιμώμενες ζημίες απομείωσης.

3.1.7. Χρηματοοικονομικές υποχρεώσεις

α) Αρχική καταχώριση και μεταγενέστερη αποτίμηση

Οι χρηματοοικονομικές υποχρεώσεις, τόσο κατά την αρχική καταχώριση, όσο και μεταγενέστερα,αποτιμούνται στα ονομαστικά ποσά τους, εκτός από τις μακροπρόθεσμης λήξεως, οι οποίες αποτιμούνται στο αποσβέσιμο κόστος με τη μέθοδο του πραγματικού επιτοκίου (ή με τη σταθερή μέθοδο). Οι χρηματοοικονομικές υποχρεώσεις που εκφράζονται σε ξένο νόμισμα αποτιμούνται με την ισοτιμία του ξένου νομίσματος κατά την ημερομηνία του ισολογισμού. Οι σχετικές συναλλαγματικές διαφορές καταχωρίζονται στα αποτελέσματα.

β) Διαγραφή

Μια χρηματοοικονομική υποχρέωση διαγράφεται όταν και μόνον όταν η συμβατική δέσμευση εκπληρώνεται, ακυρώνεται ή εκπνέει, δηλαδή όταν η συμβατική δέσμευση που την δημιούργησε δεν υφίσταται πλέον.

3.1.8. Μη χρηματοοικονομικές υποχρεώσεις

α) Αρχική καταχώριση και μεταγενέστερη αποτίμηση

Οι μη χρηματοοικονομικές υποχρεώσεις καταχωρίζονται αρχικά και αποτιμούνται μεταγενέστερα στο ονομαστικό ποσό που αναμένεται να απαιτηθεί για το διακανονισμό τους. Διαφορές που προκύπτουν είτε κατά την επανεκτίμησή είτε κατά το διακανονισμό των μη χρηματοοικονομικών υποχρεώσεων καταχωρίζονται ως κέρδη ή ζημίες της περιόδου στην οποία προκύπτουν.

β) Διαγραφή

Μια μη χρηματοοικονομική υποχρέωση διαγράφεται όταν και μόνον όταν η συμβατική δέσμευση εκπληρώνεται, ακυρώνεται ή εκπνέει, δηλαδή όταν η συμβατική δέσμευση που την δημιούργησε δεν υφίσταται πλέον.

3.1.9. Προβλέψεις

Οι προβλέψεις καταχωρίζονται αρχικά και αποτιμούνται μεταγενέστερα στο ονομαστικό ποσό που αναμένεται να απαιτηθεί για το διακανονισμό τους, εκτός αν η αποτίμηση στην παρούσα αξία του ποσού που αναμένεται να απαιτηθεί για το διακανονισμό τους έχει σημαντική επίδραση στα ποσά των χρηματοοικονομικών καταστάσεων.

Ειδικότερα, οι ενδεχόμενες υποχρεώσεις για παροχές σε εργαζομένους μετά την έξοδο από την υπηρεσία, που προκύπτουν από την εργατική νομοθεσία (Ν. 2112/1920), δεν αναγνωρίζονται στις χρηματοοικονομικές καταστάσεις της 31/12, αλλά καταχωρούνται όταν καταστούν οριστικές.

GEORGIOS KARKANIAS
PRESIDENT

03/12/18

3.1.10. Κρατικές επιχορηγήσεις

Οι κρατικές επιχορηγήσεις που αφορούν περιουσιακά στοιχεία αναγνωρίζονται αρχικά ως υποχρεώσεις στην περίοδο που εισπράττονται ή στην περίοδο που καθίσταται οριστική η έγκρισή τους και υπάρχει βεβαιότητα ότι θα εισπραχθούν. Οι κρατικές επιχορηγήσεις αναγνωρίζονται με τα ποσά που εισπράπονται ή εγκρίνονται οριστικά. Μεταγενέστερα της αρχικής αναγνώρισης, οι κρατικές επιχορηγήσεις αποσβένονται με τη μεταφορά τους στα αποτελέσματα ως έσοδα, στην ίδια περίοδο και με τρόπο αντίστοιχο της μεταφοράς στα αποτελέσματα της λογιστικής αξίας του στοιχείου που επιχορηγήθηκε. Οι κρατικές επιχορηγήσεις που αφορούν έξοδα αναγνωρίζονται αρχικά ως υποχρεώσεις στην περίοδο που εισπράττονται ή στην περίοδο που καθίσταται οριστική η έγκρισή τους και υπάρχει βεβαιότητα ότι θα εισπραχθούν. Οι κρατικές επιχορηγήσεις που αφορούν έξοδα μεταφέρονται στα αποτελέσματα ως έσοδα στην περίοδο στην οποία τα επιχορηγηθέντα έξοδα βαρύνουν τα αποτελέσματα.

3.1.11. Έσοδα και έξοδα

Η εταιρεία καταχωρίζει τα έσοδα και τα έξοδα, όταν αυτά καθίστανται δουλευμένα.

Ειδικότερα:

- Τα έσοδα από πώληση αγαθών καταχωρίζονται εντος της περιόδου στην οποία καθίστανται δουλευμένα και εφόσον πληρούνται όλες οι παρακάτω προϋποθέσεις:
  - ✓ Μεταβιβάζονται στον αγοραστή οι ουσιαστικοί κίνδυνοι και τα οφέλη που συνδέονται με την κυριότητά τους.
  - ✓ Τα αγαθά γίνονται αποδεκτά από τον αγοραστή.
  - ✓ Το οικονομικά οφέλη απο τη συναλλαγή μπορούν να αποτιμηθούν αξιόπιστα και θεωρείται σφόδρα πιθανή η εισροή τους στην οντότητα.
- Τα έσοδα από παροχή υπηρεσιών και κατασκευαστικά συμβόλαια καταχωρίζονται με τη μέθοδο του ποσοστού ολοκλήρωσεως και εφόσον θεωρείται σφόδρα πιθανή η εισροή του οικονομικού οφέλους της συναλλαγής. Εναλλακτικά και όταν δεν υπάρχει ουσιώδης επίπτωση στις χρηματοοικονομικές καταστάσεις, τα έσοδα από παροχή υπηρεσιών επιμετρώνται με την μέθοδο της ολοκληρωμένης σύμβασης.
- Τα έσοδα που προέρχονται από τη χρήση περιουσιακών στοιχείων της οντότητας από τρίτους καταχωρίζονται ως εξής:
  - ✓ Τα έσοδα από τόκους λογίζονται βάσει της αρχής του δουλευμένου.
  - ✓ Τα μερίσματα ή παρόμοιας φύσεως εισόδημα από τη συμμετοχή στην καθαρή θέση άλλων οντοτήτων όταν εγκρίνονται από το αρμόδιο όργανο που αποφασίζει τη διανομή τους.
  - ✓ Τα δικαιώματα βάσει των σχετικών συμβατικών όρων.
- Τα έξοδα αναγνωρίζονται στην κατάσταση αποτελεσμάτων βάσει της αρχής του δουλευμένου.

3.1.12. Συναλλαγές σε ξένο νόμισμα

Οι συναλλαγές σε ξένο νόμισμα μετατρέπονται κατά την αρχική αναγνώριση στο νόμισμα στο οποίο καταρτίζονται οι χρηματοοικονομικές καταστάσεις της οντότητας με την ισχύουσα συναλλαγματική ισοτιμία κατά τη συναλλαγή. Στο τέλος κάθε περιόδου αναφοράς: (α) τα νομισματικά στοιχεία μετατρέπονται με την ισοτιμία κλεισίματος της ημερομηνίας του ισολογισμού, (β) τα μη νομισματικά στοιχεία που εκφράζονται σε ξένο νόμισμα και επιμετρώνται στο κόστος κτήσεως, μετατρέπονται με

GEORGIOS KARKANIAS
PRESIDENT

03/12/19

την ισοτιμία της αρχικής αναγνώρισης. Οι συναλλαγματικές διαφορές που προκύπτουν από το διακανονισμό νομισματικών στοιχείων ή από τη μετατροπή τους με ισοτιμία διαφορετική από την ισοτιμία μετατροπής κατά την αρχική αναγνώριση ή κατά τη σύνταξη προγενέστερων χρηματοοικονομικών καταστάσεων, αναγνωρίζονται στα αποτελέσματα της περιόδου που προκύπτουν.

3.1.13. Στοιχεία της καθαρής θέσεως

Τα κονδύλια της καθαρής θέσεως καταχωρίζονται αρχικά και αποτιμούνται μεταγενέστερα στα ονομαστικά ποσά, που έχουν ληφθεί ή καταβληθεί.

3.1.14. Ενδεχόμενα περιουσιακά στοιχεία και ενδεχόμενες υποχρεώσεις

Τα στοιχεία αυτά αφορούν ενδεχόμενα δικαιώματα και δεσμεύσεις αντίστοιχα, τα οποία προκύπτουν από γεγονότα του παρελθόντος και η ύπαρξή τους θα επιβεβαιωθεί μόνο από το αν συμβούν ή δεν συμβούν ένα ή περισσότερα αβέβαια μελλοντικά γεγονότα, τα οποία δεν είναι πλήρως υπό τον έλεγχο της Εταιρείας. Τα στοιχεία αυτά γνωστοποιούνται στις σημειώσεις των χρηματοοικονομικών καταστάσεων.

3.1.15. Γεγονότα μετά την ημερομηνία ισολογισμού

Οι αξίες των περιουσιακών στοιχείων και των υποχρεώσεων κατά την ημερομηνία του ισολογισμού, προσαρμόζονται, εάν υπάρχει αντικειμενική ένδειξη ότι διορθωτικά γεγονότα μετά την ημερομηνία αυτή επιβάλλουν προσαρμογές της αξίας τους. Οι προσαρμογές αυτές γίνονται για τέτοια γεγονότα, ως την ημερομηνία εγκρίσεως των οικονομικών καταστάσεων από το Διοικητικό Συμβούλιο. Τα μη διορθωτικά, μετά την ημερομηνία του ισολογισμού γεγονότα, γνωστοποιούνται εφόσον είναι σημαντικά, στις σημειώσεις των χρηματοοικονομικών καταστάσεων.

3.1.16. Σημαντικές λογιστικές εκτιμήσεις και παραδοχές

Οι εκτιμήσεις και οι παραδοχές αξιολογούνται διαρκώς και βασίζονται στην ιστορική εμπειρία και σε άλλους παράγοντες, συμπεριλαμβανομένων αναμενόμενων μελλοντικών γεγονότων που, υπό τις παρούσες συνθήκες, αναμένεται να πραγματοποιηθούν.

3.2. Μεταβολή λογιστικών πολιτικών, μεταβολές λογιστικών εκτιμήσεων και διόρθωση σφαλμάτων προηγούμενων περιόδων

3.2.1. Μεταβολή λογιστικών πολιτικών

Οι μεταβολές λογιστικών πολιτικών, καταχωρίζονται με αναδρομική επαναδιατύπωση των χρηματοοικονομικών καταστάσεων όλων των περιόδων που δημοσιοποιούνται μαζί με τις καταστάσεις της τρέχουσας περιόδου, ώστε τα παρουσιαζόμενα κονδύλια να είναι συγκρίσιμα.

Στην παρούσα περίοδο δεν προέκυψε ανάγκη τέτοιας μεταβολής.

3.2.2 Μεταβολές λογιστικών εκτιμήσεων

Οι μεταβολές των λογιστικών εκτιμήσεων καταχωρίζονται στην περίοδο, στην οποία διαπιστώνεται ότι προκύπτουν και επηρεάζουν αυτή την περίοδο και μελλοντικές περιόδους, κατά περίπτωση. Οι μεταβολές αυτές δεν αναγνωρίζονται αναδρομικά.

GEORGIOS KARKANTAS
PRESIDENT

03/12/18

3.2.3. Διόρθωση σφαλμάτων προηγούμενων περιόδων

Οι διορθώσεις σφαλμάτων καταχωρίζονται με την αναδρομική διόρθωση των χρηματοοικονομικών καταστάσεων όλων των περιόδων που δημοσιοποιούνται μαζί με τις καταστάσεις της τρέχουσας περιόδου.

Στην παρούσα περίοδο δεν εντοπίστηκε σφάλμα προηγούμενης περιόδου.

4. Παρεκκλίσεις από τις διατάξεις του νόμου προκειμένου να επιτευχθεί εύλογη παρουσίαση των χρηματοοικονομικών καταστάσεων (παρ. 6 άρθρου 29)

Όταν, σε εξαιρετικές περιπτώσεις, η εταιρεία παρεκκλίνει από την εφαρμογή μιας διατάξεως του νόμου για να εκπληρώσει την υποχρέωση της εύλογης παρουσιάσεως των χρηματοοικονομικών καταστάσεων, γνωστοποιεί και αιτιολογεί επαρκώς την παρέκκλιση αυτή.

Στην παρούσα περίοδο δεν προέκυψε ανάγκη τέτοιας παρεκκλίσεως.

5. Σχέσεις ενός περιουσιακού στοιχείου ή μιας υποχρεώσεως με περισσότερα από ένα κονδύλια του ισολογισμού (παρ. 7 άρθρου 29)

Δεν υπάρχουν περιουσιακά στοιχεία ή υποχρεώσεις που σχετίζεται με περισσότερα από ένα κονδύλια του ισολογισμού.

6. Αναλύσεις κονδυλίων χρηματοοικονομικών καταστάσεων

6.1. Πληροφορίες σχετικά με ενσώματα, άυλα και βιολογικά πάγια περιουσιακά στοιχεία (παρ. 8 άρθρου 29)

Στους πίνακες που ακολουθούν στις επόμενες παραγράφους παρουσιάζονται οι πληροφορίες που αφορούν την κίνηση και τη συμφωνία των λογαριασμών των ενσωμάτων παγίων.

6.7. Προκαταβολές και πιστώσεις σε μέλη διοικητικών, διαχειριστικών και εποπτικών οργάνων (παρ. 25 άρθρου 29)

Η εταιρεία δεν έχει παράσχει προκαταβολές και πιστώσεις σε μέλη του διοικητικού της Συμβουλίου.

6.8. Χρήση της επιλογής της παραγράφου 7 ή της παραγράφου 8 του άρθρου 16 του νόμου

Η Εταιρεία δεν ανήκει στην κατηγορία των πολύ μικρών οντοτήτων

6.9. Χρηματοοικονομικές δεσμεύσεις, εγγυήσεις, και ενδεχόμενες υποχρεώσεις που δεν εμφανίζονται στον ισολογισμό (παρ. 16 άρθρου 29)

α) Χρηματοοικονομικές δεσμεύσεις

Η Εταιρεία δεν έχει συνάψει μη ακυρώσιμες συμβάσεις λειτουργικών μισθώσεων που αφορούν την ενοικίαση ακινήτων.

β) Εγγυήσεις

Η Εταιρεία έχει χορηγήσει εγγυητικές επιστολές προς διάφορους τρίτους, ανάλυση των οποίων παρατίθεται στον ακόλουθο πίνακα:

	31/12/2016	31/12/2015
Καλής εκτέλεσης έργου	156.176	789.642
Λοιπές εγγυήσεις σε τρίτους		
Σύνολο	156.176	789.642

γ) Ενδεχόμενες υποχρεώσεις

Οι φορολογικές υποχρεώσεις της εταιρίας δεν έχουν εξεταστεί από τις φορολογικές αρχές για τις χρήσεις από 2009 έως 2016. Ως εκ τούτου τα φορολογικά αποτελέσματα των χρήσεων αυτών δεν έχουν καταστεί οριστικά. Η εταιρία δεν έχει προβεί σε εκτίμηση των πρόσθετων φόρων και των προσαυξήσεων που πιθανόν να καταλογιστούν σε μελλοντικό φορολογικό έλεγχο και δεν έχει σχηματίσει σχετική πρόβλεψη για αυτή την ενδεχόμενη υποχρέωση. Για τις χρήσεις 2010 έως 2014 έχει πραγματοποιηθεί μερικός έλεγχος (10.08.2017), στα αντικείμενα της φορολογίας εισοδήματος και ΦΠΑ, χωρίς να προκύψουν σημαντικές πρόσθετες διαφορές για την εταιρεία.

Larissa, 06.09.2017

Dear sir/s,

We, the undersigned PIRAEUS BANK S.A. Larissa Business Center, in reply to your relevant written request, dated 06.09.2017, confirm that you are a respectable client of ours and that you carry out your banking transactions with us in a very satisfactory manner. **Furthermore, we would like to inform you that the existing approved credit limit is up to € 2.020.000 (two million twenty thousand euro).**

The above confirmation is given without any liability on the part of our bank and its officers and does not – in any case – assume any kind of undertaking whatsoever on our part, consequently it does not produce any legal effect.

Yours Sincerely,

PIRAEUS BANK S.A.

Konstantia I. Tzerpouli

Apostolos Dim. Kameas

PROJECT EXECUTION CERTIFICATE

This is to certify that:

- The Contractor of the Projects with the name: "Extension of the Wastewater Treatment Plant of Lamia" and "Extension of the Wastewater Treatment Plant of Lamia (Phase A')" was the Company named "KARKANIAS ENVIRONMENTAL TECHNOLOGY S.A."
- The contracting parties have signed the Construction Contract with the File No 3638/E/12.11.2010 of the amount of 1.751.249,40 € (including VAT) and Construction Contract with the File No 1222/E/11.04.2011 of the amount of 788.076,00 € (including VAT) respectively.
- According to the aforementioned contracts and the bidding documentation, these assignments consisted of designing the project's implementation, the full construction and delivery of the Project at a good operational status, the extension of the Wastewater Treatment Plant as well as the infrastructure works (auxiliary works) and the 3-monht testing period of the Project's efficient operation.
- The two aforementioned projects were completed on 11/10/2012 and 10/08/2012 respectively. In addition and in line with the contractual obligations, the contractor executed the 3-month testing period of the project's efficient operation by the aforementioned deadlines.
- The aforementioned Projects have been executed skilfully and by the agreed deadlines; the contribution of "KARKANIAS ENVIRONMENTAL TECHNOLOGY S.A." to the successful completion of the Projects has been proved essential and effective.
- According to the technical description included in the Bidding Documentation, the total capacity of both Projects concerning the Wastewater Treatment Plant of Lamia is as follows:
  - Population Equivalent: 31.083 residents
  - Average Wastewater flow 6.833 m^3/d
  - Sewage flow 15 m^3/d

GEORGIOS KARKANIAS
PRESIDENT

03/12/18

○ Industrial Waste flow	623m^3/d
○ Total Flow	7.471m^3/d
Inlet Pollutant Loads	
○ Organic Loading BOD_5	1.907 kg/d
○ Suspended solids	2.303 kg/d
○ Total Nitrogen	383 kg/d
○ Total Phosphorus	67kg/d

The treated wastewater is disposed in a drainage trench (the trench of Lamia) which outfalls into the Maliakos Gulf, by diversion of the Spercheios River, pursuant to Decision No. οικ.105453/05.07.2006 concerning the approval of environmental terms, issued by the Environmental Committee of the Ministry of Environment, Planning and Public Works, as renewed and amended by Decision No. οικ.197163/28.03.2012 of the Environmental Committee of the Ministry of Environment, Energy and Climate Change, as well as by Joint Ministerial Decision No. 5673/400/05.03.97 (EU Directive: 91/271/EEC).

The quality characteristics of the treated wastewater outlet are the following:

PARAMETERS	**CONCENTRATION**
BOD_5 (mg/l)	<25
COD (mg/l)	<90
Suspended solids (SS) (mg/l)	<25
Settleable solids tested in 2h time in an imhoff cone	<0,3ml/l
Total Nitrogen (TN) (mg/l)	≤10
Ammoniacal Nitrogen ($N\text{-}NH_4^*$) (mg/l)	≤2
Total Phosphorus (TP) (mg/l)	≤10
Grease / oil	≤0,1
Floating solids	0

The treatment method applied in the Plant consists of the activated sludge system with extended aeration and simultaneous stabilization of the sludge, biological removal of nitrogen (nitrification - denitrification), as well as of a disinfection unit (chlorination – dechlorination) of the treated wastewater. The excess sludge is treated in sludge thickening tanks and it is mechanically dewatered by a decanter.

The two Projects of the WWTP of Lamia also included the construction of subsidiary units which are briefly presented in the following table:

- A Sewage Pre-Treatment Unit (pre-treatment compact unit for screening and grit removal)
- One Splitting manhole

GEORGIOS KARKANIAS
PRESIDENT

03/12/18

OFFICIAL TRANSLATION FROM THE GREEK LANGUAGE

- One Biological Reactor, i.e. a denitrification – aeration tank which consists of two denitrification departments of simultaneous operation and two aeration departments of simultaneous operation too.
- Two (2) pumping stations for the recirculation of the mixed liquor, with 735m^3/h each.
- One building for the aeration blowers – Electrical Power
- A Secondary sedimentation tank
- One pumping station for the recirculation and removal of the excess sludge, with capacity of 628m^3/h.
- One building for the decanter used for the mechanical dewatering of the sludge.
- Other Auxiliary Works which serve the above units.

This certificate is delivered upon request of KARKANIAS ENVIRONMENTAL TECHNOLOGY S.A. as an evidence of the Company's experience in a Public Tender, as well as for all legal intents and purposes.

The Head of the Technical service

ΒΕΒΑΙΩΣΗ ΕΚΤΕΛΕΣΗΣ ΕΡΓΩΝ

Βεβαιώνεται ότι:

- Ανάδοχος των έργων «Επέκταση Εγκαταστάσεων Βιολογικού Καθαρισμού Λαμίας» και «Επέκταση Εγκαταστάσεων Βιολογικού Καθαρισμού Λαμίας (Α' στάδιο)» ήταν η εταιρία ΚΑΡΚΑΝΙΑΣ ΤΕΧΝΟΛΟΓΙΑ ΠΕΡΙΒΑΛΛΟΝΤΟΣ Α.Ε.
- Υπογράφηκαν αντίστοιχα η αριθ. πρωτ 3638/Ε/12.11.2010 Σύμβαση εκτέλεσης έργου, δαπάνης 1.751.249,40€ με Φ.Π.Α. και η αριθ. πρωτ. 1222/Ε/11.04.2011 Σύμβαση εκτέλεσης έργου, δαπάνης 788.076,44€ με Φ.Π.Α.
- Σύμφωνα με τις προαναφερόμενες συμβάσεις και τα τεύχη δημοπράτησης οι εργολαβίες αυτές περιελάμβαναν αντίστοιχα την σύνταξη της μελέτης εφαρμογής του έργου, την πλήρη κατασκευή και παράδοση σε θέση καλής λειτουργίας της επέκτασης των εγκαταστάσεων βιολογικού καθαρισμού των λυμάτων, καθώς και των κατασκευών εξυπηρέτησής τους (λοιπά βοηθητικά έργα) και την τρίμηνη δοκιμαστική /αποδοτική λειτουργία τους.
- Τα δύο προαναφερόμενα έργα ολοκληρώθηκαν αντίστοιχα στις 11/10/2012 και στις 10/08/2012. Επιπλέον, στα πλαίσια των εν λόγω δύο συμβάσεων, ο ανάδοχος εκτέλεσε την τρίμηνη δοκιμαστική – αποδοτική λειτουργία των δύο έργων εντός των αντίστοιχων προαναφερόμενων προθεσμιών.
- Τα προαναφερόμενα δύο έργα έχουν εκτελεσθεί έντεχνα, εμπρόθεσμα σύμφωνα με τα εγκεκριμένα χρονοδιαγράμματα και η συμβολή της αναδόχου εταιρίας ΚΑΡΚΑΝΙΑΣ ΤΕΧΝΟΛΟΓΙΑ ΠΕΡΙΒΑΛΛΟΝΤΟΣ Α.Ε. στην άρτια κατασκευή του έργου ήταν ουσιώδης και αποτελεσματική.
- Η <u>δυναμικότητα συνολικά και των δύο έργων της επέκτασης</u> των εγκαταστάσεων Βιολογικού Καθαρισμού Λαμίας, σύμφωνα με την τεχνική περιγραφή των τευχών δημοπράτησής αυτών είναι:

GEORGIOS KARKANIAS
PRESIDENT

03/12/18

- Ισοδύναμος πληθυσμός 31.083κάτοικοι
- Μέση Παροχή λυμάτων $6.833 m^3/d$
- Παροχή Βοθρολυμάτων $15 m^3/d$
- Παροχή Βιομηχανικών αποβλήτων $623 m^3/d$
- Συνολική παροχή σχεδιασμού $7.471 m^3/d$

Ρυπαντικά Φορτία εισόδου

- Οργανικά φορτίο BOD_5 1.907kg/d
- Αιωρούμενα στερεά 2.303kg/d
- Ολικό άζωτο 383kg/d
- Ολικός φώσφορος 67kg/d

Η διάθεση των επεξεργασμένων λυμάτων γίνεται σε αποστραγγιστική τάφρο (τάφρο Λαμίας), η οποία εκβάλλει στον Μαλιακό κόλπο, μέσω εκτροπής του Σπερχειού ποταμού, σύμφωνα με την Α.Π. οικ. 105453/05.07.2006 απόφαση έγκρισης περιβαλλοντικών όρων της ΕΥΠΕ/ΥΠΕΧΩΔΕ, η οποία ανανεώθηκε και τροποποιήθηκε με την Α.Π. οικ. 197163/28.03.2012 της ΕΥΠΕ/ΥΠΕΚΑ, καθώς και την ΚΥΑ 5673/400/05.03.97 (οδηγία 91/271/ ΕΟΚ). Τα ποιοτικά χαρακτηριστικά της εκροής των επεξεργασμένων λυμάτων είναι τα εξής:

ΠΑΡΑΜΕΤΡΟΣ	**ΣΥΓΚΕΝΤΡΩΣΗ**
BOD_5 (mg/l)	< 25
COD (mg/l)	< 90
Αιωρούμενα στερεά SS (mg/l)	<25
Καθιζάνοντα στερεά εντός 2h σε κώνο imhoff	<0,3ml/l
Ολικό άζωτο (TN) (mg/l)	≤10
Αμμωνιακό άζωτο ($N\text{-}NH_4^+$) (mg/l)	≤2
Ολικός φώσφορος (TP) (mg/l)	≤10
Λίπη-Έλαια	≤0,1
Επιπλέοντα στερεά	0

Η εφαρμοζόμενη μέθοδος επεξεργασίας είναι το σύστημα της ενεργού ιλύος με παρατεταμένο αερισμό με ταυτόχρονη σταθεροποίηση της ιλύος, βιολογική απομάκρυνση του αζώτου (νιτροποίηση – απονιτροποίηση), καθώς και μονάδα απολύμανσης (χλωρίωσης-αποχλωρίωσης) των επεξεργασμένων λυμάτων. Επίσης, για την επεξεργασία της περίσσειας ιλύος προβλέπονται δεξαμενές πάχυνσης ιλύος και μηχανική αφυδάτωσή της σε φυγοκεντρικό διαχωριστή ιλύος.

Τα δύο έργα επέκτασης των εγκαταστάσεων Βιολογικού Καθαρισμού Λαμίας περιλαμβάνουν την κατασκευή των επιμέρους μονάδων, που παρουσιάζονται συνοπτικά στη συνέχεια:

- Μονάδα προεπεξεργασίας βοθρολυμάτων (προκατασκευασμένο συγκρότημα εσχάρωσης - εξάμμωσης)
- Φρεάτιο μερισμού
- Βιολογικός αντιδραστήρας, ήτοι δεξαμενή απονιτροποίησης – αερισμού, η οποία περιλαμβάνει δύο παράλληλης λειτουργίας διαμερίσματα απόνιτροποίησης και ομοίως δύο διαμερίσματα αερισμού

PROJECT EXECUTION CERTIFICATE

D.E.Y.A. of Lamia, Principal of the Project entitled "Wastewater Treatment Plant of Lianokladi – Ypati" hereby certifies that:

1. The Contractor of the aforementioned Project was the Company with the name "KARKANIAS ENVIRONMENTAL TECHNOLOGY S.A."
2. The contracting parties signed the Construction Contract with File Nr. 1486/E/13.03.2014 of the amount of 2.892.868,00 € (including VAT).
3. According to the aforementioned contract and the bidding documentation, this assignment consisted of the projects' final design, the design of the project's implementation, the full construction of civil engineering works, the supply and installation of the entire mechanical and electrical equipment of the wastewater treatment plant, the 1-month operation of the plant at a good operational status, the 4-month testing period of the plant's efficient operation and the training of the D.E.Y.A. staff.
4. The above Project was completed on 13/12/2015. Furthermore, the contractor has also performed the 1-month operation of the Plant at a good operational status and the 4-month testing period of the plant's efficient operation by the deadline set in the aforementioned contract.
5. The aforementioned Project has been executed skilfully and by the agreed deadline; the contribution of "KARKANIAS ENVIRONMENTAL TECHNOLOGY S.A." to the successful completion of the Project has been proved essential and effective.
6. According to the technical description included in the Bidding Documentation, the project's capacity is as follows:
   - Population Equivalent: 10.000 residents
   - Wastewater flow 2.160 m^3/d

   Pollutant Inlet Load
   - Organic Loading BOD5 650 kg/d

GEORGIOS KARKANIAS
PRESIDENT

03/12/18

- Suspended solids 650 kg/d
- Total Nitrogen 110 kg/d
- Total Phosphorus 18 kg/d

7. The treatment method applied in the Plant consists of the activated sludge system with extended aeration and simultaneous stabilization of the sludge, biological removal of nitrogen (nitrification - denitrification), as well as biological and chemical removal of phosphorus. In addition, the Plant also includes a tertiary treatment unit for the filtration and disinfection of the treated wastewater (chlorination – dechlorination), while the excess sludge (mechanical thickening – dewatering) is treated by a decanter.
8. By virtue of the Decision for the Approval of the Project's Environmental Terms, the treated wastewater of the WWTP is disposed to Spercheios River through a filtration trench. The methods of gravity and pumping can also be used for the wastewater disposal to Spercheios River.
9. The main auxiliary treatment units are constructed of reinforced concrete and they consist of:
   - Inlet works - Sewage Pre-Treatment Unit inside the building
     - inlet pumping station with 312m^3/h capacity (86.67l/s)
     - Pre-treatment compact unit (screening, grit and grease removal)
   - Biological Treatment Unit
     - one bioselection tank, whose effective volume is 40,64m^3
     - one tank for biological dephosphorization with effective volume: 255,85m^3
     - splitting manhole I
     - two denitrification tanks, whose effective volume is 186 m^3 each
     - two facultative zone tanks, whose effective volume is 111,6m^3 each
     - two tanks for wastewater storage and aeration, whose effective volume is 855,6 m^3 each
     - splitting manhole II – chemical dephosphorization
     - two pumping stations for the recirculation of the mixed liquor
     - two sedimentation tanks, whose effective volume is 523,1m^3 each
     - two pumping stations for the recirculation and removal of the excess sludge
   - Filtration Unit with automatic drum filter
   - Unit for disinfection and post-aeration
     - channel flow meter
     - wastewater disinfection tank (chlorination – dechlorination)
     - tank for post-aeration and industrial water
   - Wastewater Disposal Works

GEORGIOS KARKANIAS
PRESIDENT

03/12/18

- outlet manhole and pumping station – sampling manhole and inlet manhole for the filtration trench
- wastewater filtration trench – disposal manhole
- wastewater disposal pipe

- Sludge Treatment Unit
  - sludge storage tank
  - mechanical sludge thickening - dewatering with decanter inside the building
- Power Building (Electrical Power – Emergency Power Generator – Low Voltage Field) – Aeration blowers Building
- Administration Building (central supervision room –SCADA– and chemical laboratory)

This certificate is delivered upon request of the Company in order to be used as experience documentation to a bidding process, as well as for all legal intents and purposes.

Λαμία 23.1.2017
Αριθ. Πρωτ.: 292

ΘΕΜΑ: Βεβαίωση εκτέλεσης έργου
ΣΧΕΤ.:

ΒΕΒΑΙΩΣΗ ΕΚΤΕΛΕΣΗΣ ΕΡΓΟΥ

Η Δημοτική Επιχείρηση Ύδρευσης - Αποχέτευσης Λαμίας, ως κύριος του έργου «Εγκατάσταση Επεξεργασίας Λυμάτων Λειανοκλαδίου - Υπάτης», βεβαιώνει ότι:

1. Ανάδοχος του έργου «Εγκατάσταση Επεξεργασίας Λυμάτων Λειανοκλαδίου - Υπάτης» ήταν η εταιρία ΚΑΡΚΑΝΙΑΣ ΤΕΧΝΟΛΟΓΙΑ ΠΕΡΙΒΑΛΛΟΝΤΟΣ Α.Ε.
2. Υπογράφηκε η αριθ. πρωτ. 1486/Ε/13.03.2014 Σύμβαση εκτέλεσης του έργου, δαπάνης 2.892.868,00€ με Φ.Π.Α.
3. Σύμφωνα με την προαναφερόμενη σύμβαση και τα τεύχη δημοπράτησης η εργολαβία αυτή περιελάμβανε την εκπόνηση της οριστικής μελέτης και της μελέτης εφαρμογής του έργου, την πλήρη κατασκευή των έργων πολιτικού μηχανικού, την προμήθεια και εγκατάσταση όλου του μηχανολογικού και ηλεκτρολογικού εξοπλισμού της εγκατάστασης επεξεργασίας λυμάτων Λειανοκλαδίου - Υπάτης, καθώς και την ενός μηνός θέση σε αποδοτική λειτουργία και την τετράμηνη δοκιμαστική λειτουργία αυτής, συμπεριλαμβανομένης της εκπαίδευσης του προσωπικού της Δ.Ε.Υ.Α.
4. Το εν λόγω έργο ολοκληρώθηκε στις 13.12.2015. Επιπλέον, στα πλαίσια της προαναφερόμενης σύμβασης, ο ανάδοχος εκτέλεσε την ενός μηνός θέση σε αποδοτική λειτουργία και την τετράμηνη δοκιμαστική λειτουργία του έργου εντός της προαναφερόμενης προθεσμίας.
5. Το εν λόγω έργο έχει εκτελεσθεί έντεχνα, εμπρόθεσμα σύμφωνα με το εγκεκριμένο χρονοδιάγραμμα και η συμβολή της αναδόχου εταιρίας ΚΑΡΚΑΝΙΑΣ ΤΕΧΝΟΛΟΓΙΑ ΠΕΡΙΒΑΛΛΟΝΤΟΣ Α.Ε. στην άρτια κατασκευή του έργου ήταν ουσιώδης και αποτελεσματική.

GEORGIOS KARKANIAS
PRESIDENT

23/12/16

6. Η δυναμικότητα της Εγκατάστασης Επεξεργασίας Λυμάτων Λειανοκλαδίου -Υπάτης, σύμφωνα με την τεχνική περιγραφή των τευχών δημοπράτησης αυτής είναι:

• Ισοδύναμος πληθυσμός	10.000 κάτοικοι
• Παροχή λυμάτων	2.160 m^3/d
<u>Ρυπαντικά Φορτία εισόδου</u>	
• Οργανικό φορτίο BOD_5	650 kg/d
• Αιωρούμενα στερεά	650 kg/d
• Ολικό άζωτο	110 kg/d
• Ολικός φώσφορος	18 kg/d

7. Η εφαρμοζόμενη μέθοδος επεξεργασίας είναι το σύστημα ενεργού ιλύος με παρατεταμένο αερισμό με ταυτόχρονη σταθεροποίηση της ιλύος, βιολογική απομάκρυνση του αζώτου (νιτροποίηση -απονιτροποίηση), καθώς και βιολογική και χημική απομάκρυνση φωσφόρου. Επίσης, υπάρχει μονάδα τριτοβάθμιας επεξεργασίας με φίλτρανση και απολύμανση (χλωρίωση και αποχλωρίωση) των επεξεργασμένων λυμάτων. Για την επεξεργασία της περίσσειας ιλύος (μηχανική πάχυνση-αφυδάτωση) έχει εγκατασταθεί φυγοκεντρικός διαχωριστής ιλύος.

8. Τα επεξεργασμένα λύματα της ΕΕΛ, σε συμφωνία με την ισχύουσα Απόφαση έγκρισης περιβαλλοντικών όρων του έργου, διατίθενται μέσω τάφρου διήθησης στον Σπερχειό ποταμό. Επιπλέον, παρέχεται η δυνατότητα διάθεσης, είτε με βαρύτητα, είτε με άντληση στον Σπερχειό ποταμό.

9. Οι βασικές επιμέρους μονάδες επεξεργασίας, κατασκευασμένες από οπλισμένο σκυρόδεμα, είναι οι εξής:

- Έργα εισόδου - Μονάδα προεπεξεργασίας λυμάτων εντός κτιρίου
  - Αντλιοστάσιο εισόδου με δυναμικότητα 312m^3/h (86,67l/s)
  - Προκατασκευασμένο συγκρότημα προεπεξεργασίας (εσχάρωσης, αμμοσυλλογής-λιποσυλλογής)
- Μονάδα βιολογικής επεξεργασίας
  - Δεξαμενή βιοεπιλογής, ωφέλιμου όγκου 40,64m^3
  - Δεξαμενή βιολογικής αποφωσφόρωσης, ωφέλιμου όγκου 255,85m^3
  - Φρεάτιο μερισμού Ι
  - Δύο δεξαμενές απονιτροποίησης, έκαστη ωφέλιμου όγκου 186m^3
  - Δύο δεξαμενές επαμφοτερίζουσας ζώνης, έκαστη ωφέλιμου όγκου 111,6m^3
  - Δύο δεξαμενές αποθήκευσης και αερισμού λυμάτων, έκαστη ωφέλιμου όγκου 855,6m^3
  - Δύο αντλιοστάσια ανακυκλοφορίας ανάμικτου υγρού
  - Φρεάτιο μερισμού ΙΙ – χημική αποφωσφόρωση

GEORGIOS KARKANIAS
PRESIDENT

03/12/19

- Δύο δεξαμενές καθίζησης, έκαστη ωφέλιμου όγκου 523,1m^3
- Αντλιοστάσιο ανακυκλοφορίας και απαγωγής περίσσειας ιλύος

- Μονάδα φίλτρανσης με αυτοκαθαριζόμενο φίλτρο τυμπάνου
- Μονάδα απολύμανσης και μεταερισμού
  - Μετρητής παροχής καναλιού
  - Δεξαμενή Χλωρίωσης - Αποχλωρίωσης
  - Δεξαμενή μεταερισμού – βιομηχανικού νερού
- Έργα διάθεσης λυμάτων
  - Φρεάτιο και αντλιοστάσιο εξόδου ΕΕΛ- δειγματοληψίας και φόρτισης τάφρου διήθησης
  - Τάφρος διήθησης λυμάτων – φρεάτιο διάθεσης
  - Αγωγός διάθεσης λυμάτων
- Μονάδα Επεξεργασίας ιλύος
  - Δεξαμενή αποθήκευσης ιλύος
  - Μηχανική πάχυνση - αφυδάτωση ιλύος με φυγοκεντρικό διαχωριστή (decanter) σε κτίριο
- Κτίριο ενέργειας (Μ/Σ, ΓΠΧΤ, Η/Ζ) και φυσητήρων αερισμού
- Κτίριο διοίκησης (με αίθουσα κεντρικού ελέγχου μέσω SCADA και χημικό εργαστήριο)

Χορηγούμε τη βεβαίωση αυτή κατόπιν αιτήσεως της εταιρίας να χρησιμοποιηθεί ως στοιχείο εμπειρίας σε δημοπρασίες καθώς και για κάθε άλλη νόμιμη χρήση.

CERTIFICATE OF PROJECT'S EXECUTION

It is hereby certified that the Project entitled: "Biological Treatment Plant of the Agia Municipality" was executed by the Contractor with the name "J/V KARKANIAS ENVIRONMENTAL TECHNOLOGY S.A. – LATOMEIA TYRNAVOU S.A[1]" by virtue of the following contract and the Legislation in force.

The aforementioned Project was carried out based on the "design – construction" system, and it consisted of drafting the implementation design, the construction and the testing period of the wastewater treatment plant of Agia.

The Project was finally delivered on 29/04/2014 within the deadlines and prolongations approved by the Management Board pursuant to the Legislation in force.

The works were executed in compliance with the bidding documentation and they already operate in a satisfactory manner.

TECHNICAL DESCRIPTION OF THE WASTEWATER TREATMENT PLANT

According to the technical description included in the bidding documentation, which formed the basis for the works' design, the total capacity of the wastewater treatment plant is the following:

▪ Population equivalent	9.750 residents
▪ Average Wastewater flow	1.800 m^3/d
▪ Sewage inlet	100m^3/d
▪ Maximum total flow	2.572 m^3/d
Inlet pollutant loads	
▪ Organic Loading BOD_5	585kg/d
▪ Suspended solids	630kg/d
▪ Total Nitrogen	94kg/d
▪ Total Phosphorus	29kg/d

[1] (Translator's Note): Inofficial English Translation of LATOMEIA TYRNAVOU S.A.: Tyrnavos Quarries S.A.

GEORGIOS KARKANIAS
PRESIDENT

OFFICIAL TRANSLATION FROM THE GREEK LANGUAGE

Brief description of the treatment plant which consists of the following units:

a. Inlet manhole – Pumping station for the initial lifting – Sewage reception and pre-treatment

b. Pre-treatment unit

c. Biological treatment unit

Distribution manhole to the bioreactors

Bioselection – Dephosphorization tanks

Anoxic zone tanks

Aeration tanks

Recirculation of mixed fluid (internal recirculation)

d. Final sedimentation tanks

e. Filtration unit

f. Disinfection unit – Post-aeration – Outlet manhole

g. Sludge treatment

h. Leachate pumping station

i. Temporary storing tank (of untreated or semi treated sewage)

j. Buildings hosting the units

The final cost of the Project amounted to 2.613.010, 17 € including VAT.
This certificate is delivered upon request of KARKANIAS ENVIRONMENTAL TECHNOLOGY S.A. as an evidence of the Company's experience, for all legal intents and purposes.

THE DIRECTOR OF D.E.Y.A.A [Public Utility of Water Supply and Sewage of Agia]

ΒΕΒΑΙΩΣΗ ΕΚΤΕΛΕΣΗΣ ΕΡΓΟΥ

Βεβαιώνεται ότι το έργο Βιολογικός Καθαρισμός Δήμου Αγιάς» εκτελέστηκε με ανάδοχο την Κ/Ξ ΚΑΡΚΑΝΙΑΣ ΤΕΧΝΟΛΟΓΙΑ ΠΕΡΙΒΑΛΛΟΝΤΟΣ Α.Ε.- ΛΑΤΟΜΕΙΑ ΤΥΡΝΑΒΟΥ Α.Ε., σύμφωνα με τη σύμβαση και την κείμενη νομοθεσία.
Τα προαναφερόμενο έργο, που εκτελέστηκε με το σύστημα «μελέτη - κατασκευή» περιελάμβανε την σύνταξη μελέτης εφαρμογής καθώς και την κατασκευή και δοκιμαστική λειτουργία της Ε.Ε.Λ. Αγιάς.

Το έργο, παραδόθηκε οριστικά στις 29/04/2014, εντός των προθεσμιών και των παρατάσεων που εγκρίθηκαν από το Δ.Σ. σύμφωνα με την κείμενη νομοθεσία.

Η κατασκευή των έργων ήταν σύμφωνη με τα συμβατικά τεύχη και ήδη τα έργα αυτά λειτουργούν ικανοποιητικά.

ΤΕΧΝΙΚΑ ΧΑΡΑΚΤΗΡΙΣΤΙΚΑ Ε.Ε.Λ.

Η δυναμικότητα της Ε.Ε.Λ. σύμφωνα με την τεχνική περιγραφή των τευχών δημοπράτησης των έργων επέκτασης, βάσει της οποίας έγινε ο σχεδιασμός των έργων αυτών, είναι η εξής :

- Ισοδύναμος πληθυσμός	9.750 I.K.
- Μέση παροχή λυμάτων	1.800 m^3/d
- Είσοδος βοθρολυμάτων	100 m^3/d
- Συνολική μέγιστη παροχή σχεδιασμού	2.572 m^3/d

Ρυπαντικά φορτία εισροής

- Οργανικό φορτίο BOD_5	585kg/d
- Αιωρούμενα στερεά	630kg/d
- Ολικό άζωτο	94kg/d
- Ολικός φώσφορος	29kg/d

Συνοπτικά η εγκατάσταση επεξεργασίας αποτελείται από τις παρακάτω μονάδες:

α. Φρεάτιο εισόδου εγκατάστασης – Αντλιοστάσιο αρχικής ανύψωσης – Υποδοχή και προεπεξεργασία βοθρολυμάτων

β. Μονάδα προεπεξεργασίας

γ. Μονάδα βιολογικής επεξεργασίας

Φρεάτιο διανομής προς τους βιολογικούς αντιδραστήρες

Δεξαμενές βιοεπιλογής - αποσωσφόρωσης

Δεξαμενές ανοξικής ζώνης

Δεξαμενές αερισμού

Ανακυκλοφορία ανάμικτου υγρού (εσωτερική ανακυκλοφορία)

δ. Δεξαμενές τελικής καθίζησης

ε. Μονάδα διύλισης

στ. Μονάδα απολύμανσης – Μεταερισμός – Φρεάτιο εξόδου

ζ. Επεξεργασία λάσπης

η. Αντλιοστάσιο στραγγιδίων

θ. Δεξαμενή προσωρινής αποθήκευσης (ανεπεξέργαστων ή ημιεπεξεργασμένων)

ι. Κτίρια στέγασης των μονάδων

Η τελική δαπάνη του έργου ανήλθε στο ποσό των 2.613.010,17 ευρώ με το Φ.Π.Α.

Η παρούσα χορηγείται μετά από αίτηση της εταιρείας ΚΑΡΚΑΝΙΑΣ ΤΕΧΝΟΛΟΓΙΑ ΠΕΡΙΒΑΛΛΟΝΤΟΣ Α.Ε., για να χρησιμοποιηθεί ως στοιχείο εμπειρίας, όπου απαιτηθεί.

Comprehensive and global 2-year warranty included in pump sales price.

All Grundfos products come with a 2-year warranty that fully complies with legal requirements.

The warranty covers product and material defects which are not the results of normal wear and tear for a period of 24 months from the date of delivery. The warranty period may not, however, exceed 30 months from the date of production.

Warranty claims will be rejected in the following situations:

- If the defect in the product arises from:
  - any drawing, design or specification supplied by the customer/purchaser
  - modifications undertaken by the customer/purchaser or athird party without the consent of Grundfos
- If a defect is caused by:
  - normal wear and tear
  - inadequate maintenance or faulty repair by others than Grundfos
  - failure to observe the operating instructions
  - over-loading
  - use of any unsuitable material
  - the effects of chemical or electrolytic action
  - building or assembly work not undertaken by Grundfos
  - other reasons beyond Grundfos' control.

As a general rule, Grundfos will not accept to pay transportation/replacement/installation costs for faulty products.

Warranty claims may be submitted by contacting the local Grundfos sales company or the point of sale.

Benefit:

- Knowledge that Grundfos backs its products with clearly defined warranty terms
- Warranty claims with well-defined contacts and short response time.

KARKANIAS
ENVIRONMENTAL TECHNOLOGY S.A.

DEVIATIONS

GEORGIOS KARKANIAS
PRESIDENT

03/12/18

No	Subject	Employer requirements	Our design	Arguments
1	Gravel trap	It is located between the connecting shaft and the coarse screen.	It is located in front of the wastewater treatment plant shaft, just after the inlet sewer.	Objects like stones or wood pieces are removed in the front of WWTP. These objects can cause malfunctions of the control penstock (at the inlet) and the flow measuring device (at the by-pass line).
2	Gravel trap	It is a pit, where gravel and rough impurities will be trapped mainly by sedimentation. Extraction of the trapped material is achieved by means of a hydraulic double bucket grab.	Impurities are trapped in two basket screens, which operate in turn. Each one can handle the full flow capacity and is between two penstocks. Thus, there is no interruption of the operation since one basket screen can be in operation while the other can be in cleaning service.	Organic material doesn't remain in the pit, which could be a source of odor emission. Basket screens are lifted by means of a suitable lifting device.
3	Return and excess sludge pumping station	The structure shall be designed as a single-storey building with a saddle roof, with an underground section containing the sludge machinery-room and two sludge sumps.	Submersible pumps are used for the return and excess sludge. They are immersed in the pump station. Electrical switchgear for the pumps are in the main electrical panel in the sludge dewatering building, which is close to the pumping station. Consequently, there is no reason to construct a building over the pumping station.	Reduced operational costs: No cost for heating/ventilating of the building. No need of building preservation.
4	Aerobic stabilization tank	Blowers will be used for the aeration.	Jet aerator is proposed for the aeration. A spare pump for the aerator will be stored.	Reduced noise, no need to use a building. Consequently, you have the benefits, they are mentioned in No.3.
5	Automatic Service water pressure station	It shall include three pumps and a pressure vessel with min. capacity of 1000 l	The unit has two pumps and two pressure vessels having each of them capacity of 18 l. The pumps are driven by frequency controllers.	Pumps driven by frequency controllers are the modern solution for water pressure stations, because the consume less energy. At the same time, the pressure in the pipe network remains constant and it is not

GEORGIOS KARKANIAS
PRESIDENT

No	Subject	Employer requirements	Our design	Arguments
				depended on the water demand. Big pressure vessels are not needed.
6	Sludge dewatering unit	Macerators are used in front of the progressive cavity pumps	No macerators are used.	Reduced energy consumption. Macerators are used for raw wastewater, which might contain solids, and sometimes for primary sludge which may aggregation with hair.
7	Chemical Phosphorus Precipitation	$FeSO_4$ solution is used. The active element is Fe^{++}.	FeClSO4 solution is used. The active element is Fe^{+++}.	Less chemical consumption, because Fe^{+++} acts better than Fe^{++}.

1. DESCRIPTION OF THE PROJECT

LEAD TIME

Completion of works: 680 days
Tests (including individual tests, complex tests, application for trial operation): 22 days
Project of maintenance of facility: 60 days
Trial operation: 365 days
Defects notification period: 550 days

OBJECTIVES

GENERAL OBJECTIVE

The objective of the construction methodology of Wastewater treatment Plant of Danilovgrad is to present the Methods and considerations taken for the implementation of the Project effectively and efficiently. Similarly, with the Specific Procedures of Quality Control of Karkanias Environmental Technology s.a., it is wanted to present, clearly and precisely, the way it will be develop each of the activities of the project, Engineering development, the provision of resources and supplies of materials and equipment, for the purpose of creating a reliable working environment, quality, and safe for everyone involved, that meets the requirements of the Tender dossier.

SPECIFIC OBJECTIVES

-Define the main procedures for the implementation of civil works, mechanical and electrical works of the Wastewater treatment Plant of Danilovgrad.
-Indicate the mechanisms of control and monitoring of works.

2. ACTIVITIES PRIOR TO COMMENCEMENT OF FIELDWORK.

Prior to the commencement of the execution of works, it shall establish the Residence of the Project, which shall perform the following activities:
The staff shall have full knowledge of site where works will be developed, knowing the relevant characteristics of it and the surrounding infrastructure of the project.
It will be delivered and will present to the Engineer a chart with the names of those responsible for each area of the Residence of the Project, accompanying it with curriculum of professionals, technicians and other personnel involved, according to what is offered in this tender.

It will be established jointly with the Engineer and Karkanias Environmental Technology S.A., a directory of the project, with the information of the public servants and respective

GEORGIOS KARKANIAS
PRESIDENT

03/12/18

representatives, so that they could be located easily, as well as of those of the authorities, dependences and organisms that have relation with the project.
It will be proposed to the Engineer, in detail, the quality control of civil works, electrical and mechanical, indicating the laboratory that it should used for the project, and the location of its facilities.
By Karkanias Environmental Technology S.A. will be integrated into the site office, documents relating to the executive project, authorized by the Engineer, which will include all memories, drawings, specifications, local official standards, catalogue of concepts to express volumes and unit prices including detailed scope, implementation programs and monthly amounts of the use of labor, supplies and use of machinery and construction equipment, as well as lists of materials and equipment to be installed in the project: : Danilovgrad Municipal Infrastructure - Construction of Wastewater Plant.

It will be done by Karkanias Environmental Technology S.A., the obtaining of Building permits from the appropriate authorities for the construction of works, with the support of Employer.
The Site Organization Offices will have its place of work within the site, with sufficient capacity to accommodate the staff, equipment and project files, equipped with the necessary facilities to carry out desks and with its facilities corresponding to light, water and other services that are needed. The site staff will be responsible for integrating the record of the project as carried out under the supervision and no objection of Engineer.
The site staff will organize and attend all meetings convened by the Engineer and the Employer, to review the working relationships and communication channels among participants in the execution of the work.
The Residence of the Project staff will schedule and inform Engineer, the opening of the different fronts, the location of offices, warehouses and field facilities and bank of material product of the excavation or demolition.

Preliminary considerations for Karkanias Environmental Technology s.a. and subcontractors designated.
Be considered before executing any activity, the following aspects:

Each crew personnel must have an appropriate work program developed and approved by the Project Resident Engineer that displays the execution of the works in a logical and sequential manner and in which prevails the quality, safety and environmental conservation. This work program will be submitted for the Approval of the Engineer as defined in tender dossier after the commencement date.

It must have the supplies and equipment selected for the construction, in order to allow each of the stages of construction - as specified in the technical solutions of construction - are met fully and in an efficient and comprehensive way.
The staff directly involved in the execution of scheduled tasks, must have the requisite experience and the proper training, equipment and supplies for personal protection.
All works will be carried out under the specific standards of quality, safety and environment, that have approval or no objection from the Engineer, and they will be executed in the term of execution that has been proposed for the present project.

03/12/10

The organization of Karkanias Environmental Technology s.a. will have the structure of personnel and equipment in such a way that allows it to support the work in progress, in the following fields:

- Detail engineering.
- Procurement.
- Administrative.
- Quality control and supervision of the works.
- Quality, Safety, Health and Environment.

3. KARKANIAS ENVIRONMENTAL TECHNOLOGY S.A. STAFF ACTIVITIES DURING THE EXECUTION OF THE WORK

GENERAL ACTIVITIES

During the execution of the work, Karkanias Environmental Technology s.a. will perform the following general activities:
Physically detect, and report to the Engineer, existing underground facilities on the site, which interfere with the execution of the work.

Solve the construction problems of technical order, provided they do not mean a project change, or adversely impact the budget, the implementation program, or affect safety, in which case it will be presented to the Administration a report on the specific problem, containing alternative solutions, with its evaluation of cost and time, in order to determine the pertinent.

Attend **weekly progress meetings** scheduled by the Employer, participate in analyzing and solving problems that interfere with the progress of the work, either technical or administrative; in which case, develop and deliver the respective minutes to the stakeholders.

TOPOGRAPHIC CONTROL

The necessary topographic tasks so that the works are realized according to the project, are a responsibility of the personnel of Construction designated by Karkanias Environmental Technology s.a. and will be performed through topography surveyors, covering the following aspects:
Leveling and general lines.
Construction sections.
Levels of display of structures and their correct location and sizing of elements.
Computer Equipment.

The construction personnel will have a computer equipment that will enable to develop the construction works and to present the information that the Engineer could ask, as well as monitoring of the works.

03/12/18

QUALITY CHECK

Below the activities that the Karkanias Environmental Technology s.a. staff will carry out to verify the quality of the work, and their facilities and equipment, with the responsibility to implement its program of internal quality control, essential in order to ensure compliance with the contractually agreed requirements, with advancing the construction of the work or manufacturing processes of equipment.

The construction personnel must verify compliance with quality requirements that are established in the drawings, particular project specifications, requirements of Engineer, or alternatively the National and International Standards applicable to basic materials, equipment, systems, construction or manufacturing processes, listed in the contracts of execution of work and in the procurement contract.

Request the possible subcontractors or suppliers designated for equipment, to deliver with the due anticipation the supply program for its approval, must know the basic engineering for review and verification, the source of supplies. Its requisition and production start dates, completion, testing periods of the manufacturer and reception in plant and on site, also, the period of inspection and/or final approval by the authorized technical personnel in charge, packaging, shipping and receiving in the warehouse or on site.

Implement the quality assurance program and submit it to the Engineer to seek their approval. The program shall indicate the laboratories to be used for testing, the frequency of sampling and testing of materials or products, and performance testing of equipment and systems. In addition, the names of suppliers, their location and the dates in which the inspection visits will be done to the corresponding sites.

Qualify the obtained results comparing them with the requisites of quality and the tolerances recorded in the specifications and current norms, submit the respective reports to the involved parties, meeting the deadlines agreed with the Engineer for each type of test.

When test results are not satisfactory, inform the Employer and subcontractor or provider in its case, that the works, materials and respective equipment will be rejected, explaining the reasons for that decision with due technical support, and indicating if it is necessary to proceed to its demolition, removal, replacement or correction.

Reject elements that do not meet specifications due to improper handling or storage, arrange its cleanliness or repair, and approve them to be used in the project, if the results are satisfactory.

With regard to the installation of equipment and devices that are part of the work, verify that the personnel of Karkanias Environmental Technology s.a. would adhere strictly to the indications of the instructive of installation and assembly.

Verify that the contractor performs testing and commissioning of equipment and devices, following the instructions in the operation manuals.

Observe and classify the subsoil according to their characteristics of attack, as the excavation progresses, keeping a photographic record of it and the equipment used.

Locate and submit if not objection from Engineer, banks of materials for earth works and, prior sending of these to the project.

Enforce and monitor the cleanliness of the work and protections and measures to improve environmental conditions, minimizing as much as possible the inconveniences that may occur.

03/12/18

CONTROL OF PROGRAMS

In the implementation phase of work, the following activities concerning the verification of physical progress of works, will correspond to Karkanias Environmental Technology s.a.:

Deliver in the term fixed by the Engineer, the detailed construction work programs for every front of work and the general program integrated from the previous ones, which shall respect the guidelines set by THE ENGINEER in its master program, regarding the starting and ending dates of the various stages of the project, coordination with other specialized subcontractors and receiving supplies. In addition, subprograms corresponding to the necessary resources and collaterals concerning to the evaluation of work.
Prepare the following subprograms:
-Machinery and construction equipment, indicating its characteristics and quantity for every work front.
-Supplies of materials, products and equipment that are part of the project.
-Human resources, classifying the needs of qualified personnel by specialty and category.

In any case, work programs must contain clearly identifiable items or activities, with the contractually agreed dates, and identify critical activities with the appropriate symbols; allocate the quantities of work to be undertaken in the periods into which it splits, using units of measurement of work that are consistent with the concepts listed, and units of time according to the type of program, the speed of advance and frequency overview.
Check that the time allocated to planned activities are consistent with the resources and considered yields, as well as the quantities of work to be performed.
Analyze the work programs and to give opinion on whether to accept or modify them, turning them to the General Residence of THE ENGINEER, for its knowledge.
Implement these programs in the project, once submitted by THE ENGINEER, which will be considered as contractual documents, verifying that there is no front of work that lacks program.
Verify the Contractor complies with the programs, where applicable, to ensure the contractually agreed delivery dates, comparing the real production against the programmed one, with the predetermined frequency of review or the one that deserves the problems of advance of the work.
To this effect will be a record of the quantities of work executed in the period, which could be considered to be finished, which are measured in the same units as those contained in the program, as well as work in process, weighting its degree of progress. Similarly, it will be treated the control of advance of the providers.

GEORGIOS KARKANIAS
PRESIDENT

03/12/18

4. PROCUREMENT OF MATERIALS AND EQUIPMENT

The definition of mechanical and electrical equipment, instrumentation and control, and procurement of materials, will be made according to the product of the Engineering Review.
All supplies will be delivered to the warehouses of the project, on the dates specified in the schedule of supplies to be formulated at the end of the Detailed Engineering.
For reception will proceed in accordance with established procedures and technical specifications determined in Detailed Engineering, establishing a process of control that will allow to know in any moment the received, classified, dispatched and lacking quantities to the date of such requirement.
Be taken into account that prior to all this, it shall be enabled and properly conditioned the storage area of materials and equipment, according to the instructions of the manufacturers and suppliers.
It shall be made appropriate lists of the materials to be received, making a detailed inventory of each item, checking the reception status.
In case of defective materials, shall be made the appropriate listings in order to proceed to the repair or replacement of them, as appropriate, reporting at all times to THE ENGINEER.
At the end of the reception of the supplies will be signed internally and as a conformity manner, Minutes of Reception of materials and supplies with the pertinent notes on the defective materials, if any.
In the reception processes will be properly recorded the following information:
•Type of material (description of N° of equipment or component, according to catalog).
• Amount received.
•State of the packing.
• State of equipment received.
• Existing damage, if any.
• Missing elements.
• Surface finish (coating condition), in the case of supports and frames.
• Date of receipt and exit in store.
• Person who delivers.
• Person who receives.

MOBILIZATION, EQUIPMENT TRANSPORTATION AND CONSTRUCTION MATERIALS

In general, mobilization, equipment transportation and construction materials shall be in accordance with the schedule use of equipment and work activities to be undertaken, which will be presented in due course to THE ENGINEER.
For this purpose, suitable means of transport shall be used to prevent damage to materials, equipment and other supplies.
In general, this activity will be properly coordinated so that none phase of construction is affected by the eventual lack of equipment and materials.

GEORGIOS KARKANIAS
PRESIDENT

03/12/18

5. EXECUTION OF THE CIVIL WORKS.

STRIPPING OF TOP SOIL.

Before starting the cleaning tasks are carried out in the sectors of the work to be executed by removing shrubs and other elements of interference with the work, to free up the sector fully to the purpose of enabling the proper conduct stakeout.
Before starting work there will be a general topographic stakeout of the work area and cleaning of the vegetable layer by mechanical means in the sector corresponding to the work as project blueprints.

EXCAVATIONS

For the excavation of large volumes, consisting of the cutting and removal of all material to be eliminated to reach the levels indicated by the Project, massive methods will be used being specially careful in that these excavations do not damage the integrity of the existing structural elements. The equipment to be used shall be in perfect conditions to operate and will be the suitable ones for the assigned work, guaranteeing in this way an optimal yield.
The whole material product of the cut and extraction will be transported inside the project area to pre-established zones indicated in the project in order to be used in construction and the rest of surplus materials will be transported to the location designated by Employer.
The control of these excavations will be done exclusively by means of topographic equipment.

COMPACTED FILLING

For the filling needed to reach the indicated levels of platforms, massive methods will be used.
These shall be confirmed by materials removed from excavations, in case they were suitable for these fillings. The equipment to use will be in good working condition and will be ideal for the work assigned, ensuring optimum performance.
The fillings shall be made in accordance with the technical specifications indicated in the technical expedient and the control of the levels will be realized by means of topographic equipment.

CONCRETE WORKS

The tracing of the work strictly according to approved plans and the indications given by the resident work, previous authorization from THE ENGINEER.
In making the general stakeout of the work, shall be fixed reference points for lines and levels, in inalterable form.
Preparation of terrain: By cleaning is removed from the terrain all existing material, waste, plants, trunks or roots that may hamper the construction work.

GEORGIOS KARKANIAS
PRESIDENT

03/12/18

Reinforced concrete

Formwork: will be dimensioned in order to withstand the launch pressure and vibration of fresh concrete, as well as the weight of the personnel involved in those operations.

Shall be watertight in order to prevent leakage of grout and mortar. Each emptying will take care to ensure adequate adhesion to the hardened concrete of previous emptying.
As for the forms of walls and other repetitive elements, elements shall be manufactured especially designed in steel and/or wood, in order to simplify the work of formwork and stripping, minimizing downtime.
The reuse of the formworks will always be conditioned to clean them once the stripping of the previous filling is done.
Immediately after proceeding to the careful stripping of the prompt structures, the union points will be repaired, as well as other defects that could exist.
Formwork panels will be mobilized, according to its weight manually or with lifting equipment and its position shall be controlled permanently, seeking to correct any lead output or deformation of the structure. For the propping of the structure when necessary shall be used props of section adapted to the charges to be supported.
In the propping of roof flagstone shall be used well known brands equipment from the formwork market, the type of formwork will be considered depending on the height and thickness of the flagstone.

Steel structure: equipment used for cutting and bending of the trusses shall be placed in an area specially set aside for them. These services shall be executed with proper equipment and specialized personnel. The raw steel will be stored separately by diameter and out of the direct contact with the ground, using for it sleepers of concrete or wooden. The steel bars shall be clean, avoiding any contact with substances that may affect the adhesion of concrete. The cutting and bending of trusses shall obey a planning, so as to minimize losses, by ordering the production flow according to the implementation schedule, thus ensuring the normal course of work.
To ensure proper positioning of the trusses shall be used spacers of mortar or plastic, built at a dosage of the same, compatible with the concrete strength specified for the piece.
Special pieces shall be manufactured also for fixation of the trusses, making sure that metallic points do not outcrop on the surface of concrete.

Concrete: The concrete premixed with cement as indicated in the detailed engineering.
In order to ensure the strength and quality of concrete specified in the project, shall keep a tight control of dispatch as well as testing of fresh concrete and hardened concrete.

The compaction of the concrete will be achieved by applying vibration criteria. It is envisaged the use of immersion vibrators, of diameters adapted to the type of concrete to be poured and to the section of the element to be realized.
The curing of concrete shall be realized by means of the application of additives.
In the construction, joints of the elements that will be in contact with the water shall be used joints that may be PVC or suitable material in each case.

GEORGIOS KARKANIAS
PRESIDENT

03/12/18

Carpeting work

Masonry work involves the construction of walls, partitions, block and parapets on clay brick masonry, concrete as indicated in the detailed engineering plans.
Labor to be used in masonry construction shall be qualified and full compliance with the basic requirements of project:
a) The walls must be constructed to lead and in line.
b) All horizontal and vertical joints, shall be completely filled with mortar.
c) The thickness of the mortar joints shall be at least 10 mm and on average 15 mm.
d) The partitions or blocks shall settle with the clean surfaces and without water.
h) The mortar shall be prepared only in the right amount for the use of one hour, not allowed the use of remixed mortar.
At all times, it shall be checked the verticality of the walls.
On the walls meeting shall be required the simultaneous raising of them for which shall provide the scaffolding for the assembly of adjacent walls.
All brick walls shall be tied to columns with any of the following procedures or a combination of them, according to blueprints.

GEORGIOS KARKANIAS
PRESIDENT

6. ELECTROMECHANICAL WORKS AND INSTRUMENTATION

03/12/18

Shall be checked that the material received matches the order placed to the manufacturer,
verifying it through the list of material accompanying it and monitoring the proper status of each element.
There will be the manufacturer's instructions regarding the treatment of the material in stages of unpacking, handling, storage and protection during mounting.

ASSEMBLY

Before to the beginning of the mounting, shall be verified the suitability and good condition of the place defined in the installation blueprints the following checkpoints will have priority:
Protect equipment and mainly the electronic against solar beams and transitory sources of heat.
Avoid mounting when the intended location is subject to sudden changes in temperature.
Avoid mounting in areas that can be crossed by pipelines that can carry any type of liquid.
Avoid mounting of equipment in areas subject to strong vibrations, without taking the necessary measures.
Respect the instructions of the respective manufacturers in terms of position of mounting of the equipment, coating in areas of high or low temperature.

MECHANICAL INSTALLATION

Screws, bolts, nuts and washers shall be as indicated by the manufacturer on the mounting instructions.
In equipment that is installed in piping (flow meters, pressure transmitters, etc.) must respect the following slogans:

ALIGNMENT OF THE EQUIPMENT WITH PIPING

Assembly joints

Joints of the same size as the pipe to avoid disturbance in the fluid.
Putting to ground:
As general norm, the screws of the bridles or elements of fixation, shall not be used for the connection of the putting to ground.
In equipment that is installed in piping shall be taken into account the following:
Use a copper hose with both ends finished in terminal and join both flanges by means of threaded screws in the flanges themselves. By a bare copper wire of section superior to 4 m/m2. Join one of the flanges to the general land network of the installation.
For equipment that is installed on metal fittings or directly on wall, shall be taken into account the manufacturer's instructions as to the ground connection.

GEORGIOS KARKANIAS
PRESIDENT

Electrical installation

03/12/18

All instrumentation equipment are connected to electrical conductors for both their supply and sending signals to a control board, the following indications shall be observed:
Each connection must be isolated from all other.
Do not connect any connection to the screen cables or drain, except as noted on plans.
Cable entries must be properly sealed.
The cable entries used must be suitable for the size of cable used ensuring that the closure has to be airtight.
The unused cable entries must be closed and sealed.
For connection shall always be observed the manufacturer's instructions.
Cover any cable that is naked.
Coaxial cables shall be twisted slightly.

Sealing

To achieve environmental protection in connection boxes (sealing) of equipment shall be made an encapsulation of them respecting the following points:
Apply appropriate precautionary measures in handling hazardous materials or of special uses.
Read the manufacturer's instructions carefully before preparing the material or special handling equipment.
The box terminals or connections must be encapsulated immediately at the end of connection to prevent moisture penetration.
Check all connections prior to encapsulation.
Do not refill excessively the connections box nor to leave that the material of encapsulated does contact neither with the theoretical joint or with the groove.

GEORGIOS KARKANIAS
PRESIDENT

7. MAIN ACTIVITIES OF THE CONSTRUCTION

The main activities considered in the work plan are, Construction of:

Inlet and overflow manhole
Septage unit
Pumping station
Mechanical Wastewater Pre-treatment Unit
Flow Distribution Chambers I & II
Predenitrification Tank
Circulating Activated Sludge Tank
Final Settling Tank
Return Activated Sludge and Excess Sludge Pumping
Chemical Phosphorus Precipitation
Filtration Unit
UV Disinfection Unit – Effluent
Sludge Aerobic Stabilisation and Thickening Tank
Sludge Holding Tank
Sludge Mechanical Dewatering Unit
Service Water Unit
Dewatered Sludge Storage Site
Blower House
Transformer House
Operation Building / Warehouse / Garage

Pipe works
Landscaping works
Fencing works

Mechanical Installations
Electrical Installations

PRELIMINARY CONSTRUCTION SCHEDULE

Construction schedule in form of Gantt chart is given in separate attachment as requested by tender dossier.

RECEDENCE AND SUCCESSION AMONG ACTIVITIES

The different tasks of a work are not performed normally in succession not simultaneously. Make all the jobs in succession would, in general, illogical, because it would lead to greatly prolong the time. Trying to simultaneously in all cases is also absurd, because some of them can only be made when previous ones have already been completed, in whole or in part.
The jobs are linked with the preceding and the following in the most convenient order, so as to properly solve the technical demands of the work, achieving an optimum combination of cost and time. This is a challenging job that requires studying various alternatives to be able to choose the one which gives better response to the objectives.

03/12/18

The relationship between different jobs is obvious, but many others can be done in one or another time, as the technical solution is adopted or depending on the availability of resources or the best distribution.
With these basis it will be done the predecessor and successor jobs table, determining what and how to precede each of the defined in time programme. Linkages necessaries for the preparation of the work program are defined.
In the developing of the work program will use four different types of relationships:
The relationship end to start (FC) is the default connection when jobs are related. Once the first job finishes, the next to begin.
A relationship is an end to end (FF) when the two jobs end at the same time.
In a relationship beginning to start (SS) the two jobs start at the same time.
The relationship beginning to end (SF) is less common than the others, but can occur when the completion of a job depends on the beginning of a subsequent job.
Attached is the list of precedence and succession, each of the activities selected to serve on the programming of work.

CRITICAL ACTIVITIES

Throughout the execution of the works subject of this planning will be manifested a series of activities whose duration will determine the other units. They are the critical activities.
On that basis they will develop the remaining works directly conditioned by them; these non-critical works will have certain time margins for implementation, being represented as gaps.
Since the work does not present a unique pattern of action, because the fronts of action are not unique, there is some uncertainty in regard unexpectedly, it is difficult to establish in advance what activities have or have no gaps.
It is therefore planned an implementation program consistent with the actions to be taken, which foresees a series of activities which by their volume, complexity or generating units, will be conditions of other jobs, regardless of which can happen unexpectedly.
Some of them will be critical for reasons of direct dependence, while others have been established because of strict security, etc.
Also appear certain activities which although not strictly critical, have been highlighted as such, in order to emphasize the importance of a temporal milestone or development of an activity that for many aspects is remarkable in any sense for the proper development of works.

8. TEMPORARY FACILITIES DURING CONSTRUCTION

The temporary facilities to during the construction are:
-Temporary offices for Contractor and Employer/Engineer as requested
-An area for material storage
-A provisional connection of supplies (water, electricity and telecommunications)
-Toilets for workers and technical staff on site

Temporary facilities are shown in separate attachment Site organization, as requested by Tender dossier.

9. ISO 9001 Certificate

CERTIFICATE OF REGISTRATION

This is to certify that

KARKANIAS ENVIRONMENTAL TECHNOLOGY S.A.
Industrial Area of Larissa
PC 41004
PO Box 3053
Larissa
Greece

has been audited and found to meet the requirements of standard
ISO 9001:2008 Quality Management System

Scope of certification

General Contractor in Design, Construction, Operation and Maintenance of Water management Liquid and Solid Wastes Projects in which Hydraulic, Electromechanical, Structural, Industrial, Energy Projects, Roads and Ports Construction are included.

ertificate number: 10096

ue number: 2017-01

rtificate start date: 19 February 2017

rtificate expiry date: 14 September 2018

te of initial certification: 19 February 2014

CONSTRUCTION SCHEDULE STATEMENT

The objective of the Construction Schedule of Wastewater treatment Plant of Danilovgrad is to present the time schedule and considerations taken for the implementation of the Project effectively and efficiently.

Commencement date shall be the date at which Contract Agreement will be signed and the Employer will receive the Performance Security and the Professional Indemnity Insurance.
Prior the implementation of any Contracted work, Contractor will have access to site and start the mobilization of his plant and equipment. Contractor will have access to the site fourteen (14) days after the commencement date and his mobilization will be done in the time schedule of two weeks.

Afterwards of Commencement Date, will start the implementation of "Preliminary Design" for 90 days, followed by the "Revision & Control of preliminary" for 30 days and "EIA" for 45 days.
After those activities, will start the procedure of issuing of "Building Permit" in duration of 60 days.
When the issuing of "Building Permit" will be completed, will start the implementation of "Main Design" for 60 days, followed by the "Revision & Control of main design" for 30 days.
Time for completion is defined 365 days and time for tests is defined 22 days.
After the completion of works and tests, will be executed the "Project of maintenance of facility" (60 days) and "Trial Operation" of the Project for the duration of 365 days, concluded in Completion day after 30 days.

Key materials of the Project can be defined the Mechanical and Electrical Equipment.
After the approval of the Equipment, it will be purchased and transport at the Construction Site in separate time periods, as it is presenting in the Construction Schedule Table. Main priority is the continuous execution of Mechanical and Electrical works including the transportation of goods and installation of the equipment in each part of the Project.

Concrete and reinforcement, materials than can be characterized as key materials, are existing and will be delivered at the Construction Site from close distance and their procurement procedure will be immediate during the implementation of site works.

2. **Mobilization Activities**..... 2
3. **Mobilization of Equipment**..... 3

GEORGIOS KARKANIAS
PRESIDENT

03/12/18

1. Introduction

Upon award of the Contract and authorization to proceed, mobilization activities will commence according to this Mobilization Plan.

Mobilization will consist of the following:

1. Mobilization of necessary labor, materials, equipment, tools and supervision to commence work on the project.
2. Continued processing of the required submittals which includes administrative and procedural requirements for submitting project work plans, product data, samples and any other submittals required in the Project Specifications.
3. Performance of pre-construction activities, which include the construction of protection fence and staging support trailers.
4. The Contractor personnel, taking part in the active remediation activities, will receive the required medical surveillance (initial entrance physicals) prior to any hazardous or intrusive the work being performed.

2. Mobilization Activities

Based on the nature of the project, will be constructed main site fence and entrance for protection and safety reasons.

1. Installation of a temporary chain link fence where is needed, around the perimeter of construction facilities, for protection and safety reasons.
2. Construction Site entrance will be constructed in site fence protected facility of the project. The construction sequence will include:
    a. Removal of the existing stone surface and soils,
    b. Compaction of ground,
    c. Installation of geotextile fabric,
    d. Delivery, placement and compacting of crushing stone covering the geotextile fabric.
    e. Installation of temporary site entrance.

GEORGIOS KARKANIAS
PRESIDENT

03/12/18

3. Deliver, stage, block and anchor temporary office trailers. Each trailer will be furnished and supplied with the necessary office furniture, equipment and supplies. Temporary utility services will be supplied. Potable water and portable toilets will be provided to service the support facility. The support facility will be maintained in a clean and orderly fashion the Project.
4. The foundation and surface layer for the temporary office trailers, employee/visitor parking area and access roads will be constructed as an aggregate base layer with delivery, placement and compaction of gravel/ base stone. This layer of stone will be graded to insure proper drainage is maintained and does not impact the surrounding area.

3. Mobilization of Equipment

General and heavy equipment will be mobilized to the site and will be staged inside the Project's security fence.

KARKANIAS

Letter of intent

This letter of intent refers to cooperation on project:Danilovgrad Municipal Infrastructure - Construction of Wastewater Plant.

According to published tender document No. EBRD ME DAN 9000,D.O.O. "Vodovod i kanalizacija" Danilovgrad, announced tender for procurement of Construction of Wastewater Plant.

Company "**Karkanias Environmental Technology S.A.**". with headquarters on address Industrial Area of Larissa Postal Code 41004 Postal Box. 3053 Larissa, Greece is specialized company in field of construction of waste water plants and waste water treatment, and participates on the above tender procurement as tenderer.
Company **IGP "FIDIJA" d.o.o** with headquarters on address StaraVaros B7, Postal Code 81000 Podgorica, Montenegrois active on civil engineering construction i.e.: earth works (wide excavations and transport of materials for all kind of buildings), (road construction, water systems, sewage systems and similar), hydro technical facilities (river regulation, mini hydropower plants etc.), and residence building construction.

With this letter the above mentioned companies confirm their interest for cooperation on project "Construction Of Wastewater Plant"; promoted by the Municipality of Danilovgrad, Montenegro.

Company "**Karkanias Environmental Technology S.A.**"intendsto use **IGP "FIDIJA"d.o.o** 'savailable equipmentfor implementation of the project as it statedin the relative tender forms and attachments,
Company **IGP "FIDIJA" d.o.o** is willing to disposethe above mentioned equipment for implementation of the projectto the **"Karkanias Environmental Technology S.A."**

Preconditions for cooperation based on this letter of intent are:
Employer's evaluation of "Karkanias Environmental Technology S.A." as the successful tenderer of the project.
Achievement of a mutual agreement between the above mentioned companies

Letter of intent is verified by authorized representatives of companies with their signatures and stamps:

IGP "FIDIJA"d.o.o.
IvanBlagojevic, Executive director

iii) CONTRACTOR'S EQUIPMENT

The Tenderer shall provide adequate information to demonstrate clearly that it has the capability to meet the requirements for the key equipment listed in Volume I, Attachment 2 (Preliminary Programme). A separate Form shall be prepared for each item of equipment listed, or for alternative equipment proposed by the Tenderer. The Tenderer shall provide all the information requested below, to the extent possible. Fields with asterisk (*) shall be used for evaluation.

In case of a JVCA the form shall be submitted for each partner of the JVCA

Type of Equipment* EXCAVATOR		
Equipment Information	Name of manufacturer CATERPILAR	Model and power rating 323D , 110KW
	Capacity* 1300 l	Year of manufacture* 2007
Current Status	Current location BIJELA, TIVAT, MONTENEGRO	
	Details of current commitments	
Source	Indicate source of the equipment ☐ Owned ☒ Rented ☐ Leased ☐ Specially manufactured	

The following information shall be provided only for equipment not owned by the Tenderer.

Owner	Name of owner IGP FIDIJA d.o.o.

II - REZULTATI PREGLEDA I ISPITIVANJA:

1. Kočenje: dizalice - Zadovoljava
mačke - Zadovoljava
dizanja - Zadovoljava

2. Krajnji sklјučivači: dizalice - Zadovoljava
mačke - Zadovoljava
dizanja - Zadovoljava

3. Statičko opterećenje: Zadovoljava
4. Dinamičko opterećenje: Zadovoljava
5. Stabilnost dizalice: Zadovoljava
6. Metalna konstrukcija: Zadovoljava
7. Antikoroziona zaštita: Zadovoljava
8. Natpisi i oznake: Zadovoljavaju
9. Električna instalacija: zaštita od direktnog dodira - zadovoljava
zaštita od indirektnog dodira - zadovoljava
otpor izolacije el. instalacije - zadovoljava
izjednačenje potencijala - zadovoljava
napojni vod i ostali kablovi - zadovoljava
glavna sklopka - zadovoljava
dizalična sklopka - zadovoljava
uređaji za upravljanje - zadovoljava

Tehnička dokumentacija: priložena
PRIMJEDBE :
DATUM PREGLEDA I ISPITIVANJA: 29.09.2016.god.

III - NAPOMENA :

A)Pregled i ispitivanje su izvršena u skladu sa Zakonom o zaštiti i zdravlju na radu(SL. RCG br.:34/14), i Pravilnika o postupku i rokovima za vršenje periodičnih pregleda i ispitivanja spedstava za rad, sredstava i opreme lične zaštite na radu i uslova radne sredine(SL. RCG br.: 71/05)

B) Stručni nalaz ima važnost 12 mjeseci ukoliko nije došlo do remonta i promjene lokacije sredstva za rad.

C) Sredstvo za rad može održavati samo stručno lice mašinske i elektro struke uz korišćenje kvalitetnih rezervnih djelova.

D) Uz stručni nalaz se nalazi i izvjestaj o ispitivanju dinamičkog modula deformacije.

IV - OCJENA: NA NAVEDENOM SREDSTVU ZA RAD SU OBEZBIJEĐENE PROPISANE MJERE I NORMATIVI ZAŠTITE NA RADU.

Ministarstvo rada i socijalnog staranja

Broj: 170-108/15-3
Podgorica, 05.01.2016. godine

Na osnovu člana 41 Zakona o zaštiti i zdravlju na radu ("Sl. list CG", br. 34/14), člana 2 i 12 Pravilnika o uslovima koje mora da ispunjava pravno ili fizičko lice za obavljanje stručnih poslova iz zaštite na radu i postupku za utvrđivanje ispunjenosti tih uslova ("Sl. list RĆG", br. 67/05), rješavajući po zahtjevu D.O.O. "MONTINSPEKT" Bulevar Pera Četkovića 113, Podgorica, broj 170-108/15-1 od 02.12.2015. godine, Ministarstvo rada i socijalnog staranja, donosi

R J E Š E N J E

OVLAŠĆUJE SE D.O.O. "MONTINSPEKT" Bulevar Pera Ćetkovića 113, Podgorica, da može obavljati sledeće poslove iz zaštite i zdravlja na radu i to:

1. izradu akta o procjeni rizika, sa predlogom mjera za njihovo otklanjanje,
2. periodične preglede i ispitivanja sredstava za rad, električnih i drugih instalacija i sredstava i opreme lične zaštite na radu,
3. ispitivanje uslova radne sredine: fizičkih štetnosti (buka), osvijetljenost i mikroklima,
4. reviziju (ocjenu) tehničke dokumentacije sa aspekta primijenjenosti mjera zaštite, tehničkih propisa i standarda, radi utvrđivanja obezbijeđenosti zaštite zaposlenih u objektima za koje je urađena tehnička dokumentacija, za procese rada koji će se obavljati u njima,
5. osposobljavanje i provjeru osposobljenosti za bezbjedan rad zaposlenih i
6. poslovi iz člana 40 Zakona o zaštiti i zdravlju na radu:
   - savjetuje poslodavca pri planiranju, izboru i održavanju sredstava za rad i sredstava i opreme za ličnu zaštitu na radu;
   - savjetuje poslodavca kod opremanja i uređivanja radnog mjesta, uzimajući u obzir i uslove radne sredine;
   - učestvuje u izradi stručne podloge za akt o procjeni rizika;
   - organizuje predhodna i periodična ispitivanja uslova radne sredine (hemijskih, fizičkih i bioloških štetnosti, mikroklime i osvijetljenosti);
   - organizuje periodične preglede i ispitivanje sredstava za rad, električnih i drugih instalacija;
   - predlaže mjere za poboljšanje uslova rada, naročito na radnim mjestima sa posebnim uslovima rada, odnosno povećanim rizicima;
   - na svim poslovima kod poslodavca prati primjenu mjera zaštite i održavanja sredstava za rad i sredstava i opreme za ličnu zaštitu na radu u ispravnom stanju;
   - obezbjeđuje uputstva za bezbjedan rad i kontroliše njihovu primjenu;

Explanation Letter of proposed equipment

This letter refers to explanation of proposed equipment and specifically vibratory Roller.

In place of one Vibratory Plate, we propose one Vibratory Roller.
Vibratory Roller "ROBERT AEBI DV 30", will have the same or better capacity and sufficient power as the vibratory plate. Also, is suitable to be used and be effective and faster in situations and positions that vibratory plate cannot be the same efficient.

2014	2014	KARKANIAS - ENVIRONMENTAL TECHNOLOGY S.A Application study of the work "Waste Water Treatment Plant of Leianokladi - Ypati" of DEYA (Municipal Water and Sewage Company) LAMIA. Colleague - Designer of the contracting company with the object the compilation of the technological design

03/12/18

2014	2014	KARKANIAS - ENVIRONMENTAL TECHNOLOGY S.A Final study of the work "Waste Water Treatment Plant of Leianokladi - Ypati" of DEYA LAMIA. Colleague - Designer of the contracting company with the object the compilation of the technological design
2014	2014	KARKANIAS - ENVIRONMENTAL TECHNOLOGY S.A Offer technical study of the work "Waste Water Treatment Plant of Agiokampos, Kato Sotiritsa and Velika of the M.U. of Melivoia". Technical company Colleague - Designer with the object the compilation of chemico-technical study for the participation in the tender of the Region of Thessaly-R.U. of Larissa-Technical works Dir/te
2013	2013	KARKANIAS - ENVIRONMENTAL TECHNOLOGY S.A Offer Technical Study of the work "Waste Water Treatment Plant of the community of Molos". Technical company Colleague - Designer with the object the compilation of chemico-technical study for the participation in the tender of the Municipality of Molos-Agios Kontantinos
2013	2013	KARKANIAS - ENVIRONMENTAL TECHNOLOGY S.A Offer Technical Study of the work "Waste Water Treatment Plant of Leianokladi - Ypati". Technical company Colleague - Designer with the object the compilation of chemico-technical study for the participation in the tender of DEYA LAMIA
2013	2013	KARKANIAS - ENVIRONMENTAL TECHNOLOGY S.A Offer Technical Study of the work "Extension of Waste Water Treatment Plant of the Municipality of Ioannina". Technical company Colleague - Designer with the object the participation in the compilation of chemico-technical study for the participation in the tender of DEYA IOANNINA
2013	2013	KARKANIAS - ENVIRONMENTAL TECHNOLOGY S.A Offer Technical Study of the work "Water supply of the eastern side of the Prefecture of Karditsa from the Smokovo lake: Water Storage and Treatment Works". Technical company Colleague - Designer with the object the participation in the compilation of chemico-technical study for the participation in the tender of the REGION OF THESSALY
2012	2012	KARKANIAS - ENVIRONMENTAL TECHNOLOGY S.A Offer Technical Study of the work "Waste Water Cleaning Plant of the Municipality of Spetses". Technical company Colleague - Designer with the object the participation in the compilation of chemico-technical study for the participation in the tender of the REGION OF ATTICA
2012	2012	KARKANIAS - ENVIRONMENTAL TECHNOLOGY S.A Offer Technical Study of the work "Waste Water Treatment Plant Construction of the community of Prosotsani". Technical company Colleague - Designer with the object the compilation of chemico-technical study for the participation in the tender of the Municipality of Prosotsani
2011	2011	KARKANIAS - ENVIRONMENTAL TECHNOLOGY S.A Offer Technical Study of the work "WASTE WATER TREATMENT PLANT OF KALAVRYTA". Technical company Colleague - Designer with the object the compilation of chemico-technical study for the participation in the tender of the DIRECTORATE OF TECHNICAL WORKS OF THE REGION OF WESTERN GREECE
2011	2011	KARKANIAS - ENVIRONMENTAL TECHNOLOGY S.A Offer Technical Study of the work "WASTE WATER TREATMENT PLANT OF THE MUNICIPALITY OF MOUZAKI". Technical company Colleague - Designer with the object the compilation of chemico-technical study for the participation in the tender
2007	2007	KARKANIAS - ENVIRONMENTAL TECHNOLOGY S.A Offer Technical Study of the work "Waste Water Treatment Plant of the Municipality Evrimenon". Technical company Colleague - Designer with the object the compilation of chemico-technical study for the participation in the tender

03/12/18

2007	2007	KARKANIAS - ENVIRONMENTAL TECHNOLOGY S.A Offer Technical Study of the work "Waste Water Treatment Plant of Pteleos - Pigadiou". Technical company Colleague - Designer with the object the compilation of chemico-technical study for the participation in the tender
2007	2007	KARKANIAS - ENVIRONMENTAL TECHNOLOGY S.A Updating of the Environmental Consequences Study of the work "Sanitary Landfill of the P. of Pelion". Study contractor
2007	2006	KARKANIAS - ENVIRONMENTAL TECHNOLOGY S.A Application study of the work "Waste Waster Treatment Plant of the Municipality of Farsala". Colleague - Designer of the contracting company with the object the compilation of the technological design.
2007	2006	KARKANIAS - ENVIRONMENTAL TECHNOLOGY S.A Application Study of the work "Biological Cleaning of the Municipality of Agia". Colleague - Designer of the contracting company with the object the compilation of the technological design.
2006	2006	MUNICIPALITY OF DOMOKOS Final study of the work "WASTE WATER TREATMENT PLANT OF THE MUNICIPALITY OF DOMOKOS". Contracting designer with the object the compilation of the chemico-technical study
2006	2006	KARKANIAS - ENVIRONMENTAL TECHNOLOGY S.A Offer technical study of the work "Waste Waster Treatment Plant of the Municipality of Farsala". Technical company Colleague - Designer with the object the compilation of chemico-technical study for the participation in the tender
2006	2006	KARKANIAS - ENVIRONMENTAL TECHNOLOGY S.A Waste water treatment and disposal study of the work "UPDATE AND EXTENSION OF THE BIOLOGICAL CLEANING OF THE MUNICIPAL SLAUGHTER HOUSE OF ALMYROS". Study contractor
2006	2006	KARKANIAS - ENVIRONMENTAL TECHNOLOGY S.A Offer Technical Study of the work "Biological Cleaning of the Municipality of Agia". Technical company Colleague - Designer with the object the compilation of chemico-technical study for the participation in the tender
2006	2006	MUNICIPALITY ELYMNION Compilation of final study and auction issues for the work "SEWAGE WATER RECEPTION AND PRETREATMENT PLANT OF THE BIOLOGICAL CLEANING INSTALLATIONS OF THE M.D. OF LIMNI". Study contractor
2005	2005	KARKANIAS - ENVIRONMENTAL TECHNOLOGY S.A Offer Technical Study of the work "Additional Works of the Waste Water Treatment Plant of the Municipality of Amyntaio". Technical company Colleague - Designer with the object the compilation of chemico-technical study for the participation in the tender
2005	2005	KARKANIAS - ENVIRONMENTAL TECHNOLOGY S.A Application study of the work "Waste Waster Treatment Plant of the Municipality of Filippiada". Colleague - Designer of the contracting company with the object the compilation of the chemico-technological design.
2005	2005	KARKANIAS - ENVIRONMENTAL TECHNOLOGY S.A Application Study of the work "Tertiary Waste Water Treatment Works aiming to the irrigation - treated waste water distribution network" of DEYA Kos. Colleague - Designer of the contracting company with the object the compilation of the technological design
2005	2005	KARKANIAS - ENVIRONMENTAL TECHNOLOGY S.A Application study of the work "Improvement of Biological Cleaning Installations of Lamia". Colleague - Designer of the contracting company with the object the compilation of the technological design
2004	2004	KARKANIAS - ENVIRONMENTAL TECHNOLOGY S.A Offer Technical Study of the work "Waste Waster Treatment Plant of the Municipality of Filippiada". Technical company Colleague - Designer with the object the compilation of chemico-technical study for the participation in the tender

03/12/18

2004	2004	KARKANIAS - ENVIRONMENTAL TECHNOLOGY S.A Offer Technical Study of the work "Improvement of the Biological Cleaning Installations of Lamia". Technical company Colleague - Designer with the object the compilation of chemico-technical study for its participation in the tender of DEYA LAMIA
2004	2004	MUNICIPALITY ELYMNION Compilation of prestudy of the work "Sewage Water Reception and Pretreatment in the Biological Cleaning Plant of Limni Euboea". Study contractor
2004	2004	MUNICIPALITY ELYMNION Compilation of the prestudy of the work "Repair of the E/M Equipment of the Biological Cleaning Plant of the Municipal District of Limni". Study contractor
2003	2003	KARKANIAS - ENVIRONMENTAL TECHNOLOGY S.A Offer Technical Study of the work "Extension of the Biological Cleaning Installations of Tyrnavos". Technical company Colleague - Designer with the object the compilation of chemico-technical study for the participation in the tender
2002	2002	KARKANIAS - ENVIRONMENTAL TECHNOLOGY S.A Application Study of the work "Supply and Installation of the Fast Refinery of Dramia". Colleague - Designer of the contracting company with the object the compilation of the technological design
2001	2001	KARKANIAS - ENVIRONMENTAL TECHNOLOGY S.A Offer Study of the work "Supply and Installation of the Fast Refinery of Dramia". Technical company Colleague - Designer with the object the compilation of chemico-technical study for the participation in the tender

UNIQA neživotno osiguranje a.d. Podgorica CAR 11/2013

Na osnovu Zakona o osiguranju Republike Crne Gore i Statuta Društva, na sjednici Odbora direktora „UNIQA neživotno osiguranje" a.d. Podgorica, održanoj dana 01.11.2013. godine, donijet je sljedeći akt poslovne politike:

AKCIONARSKO DRUŠTVO ZA OSIGURANJE
UNIQA
NEŽIVOTNO OSIGURANJE
Br. 0114-4/1
01.11. 2013 god.
PODGORICA, Bul. Sv. Petra Cetinjskog 1MW

POSEBNI USLOVI ZA OSIGURANJE OBJEKATA U IZGRADNJI PROTIV SVIH RIZIKA (CAR)

GEORGIOS KARKANIAS
PRESIDENT

POSEBNI USLOVI ZA OSIGURANJE OBJEKATA U IZGRADNJI PROTIV SVIH RIZIKA

Ovi posebni uslovi se primjenjuju na osiguranja za koja je osiguranik dao osiguravaču pismenu ponudu popunivši Upitnik koji se, zajedno sa svim ostalim pismenim aktima dostavljenim osiguravaču koje je sačinio osiguranik, smatra sastavnim dijelom polise osiguranja.

Osiguravač se obavezuju da isplati osiguraniku naknadu iz osiguranja na način i u obimu koji je ugovoren, pod uslovom da je osiguranik platio osiguravaču premiju osiguranja navedenu u polisi i pod uslovima, rokovima, isključenjima i odredbama ovih Posebnih uslova.

Opšta isključenja

Osiguravač nije u obavezi da isplati naknadu iz osiguranja osiguraniku za štetu ili odgovornost koji su neposredno ili posredno prouzrokovani, proističu ili su pogoršani:

a) ratom, invazijom, djelovanjem stranog neprijatelja, neprijateljstvima (bilo da je rat zvanično objavljen ili ne), građanskim ratom, pobunom, revolucijom, ustankom, bunom, neredima, štrajkom, demonstracijama, prisilnim zatvaranjem fabrika i radnih mjesta, građanskim nemirima, vojnom ili uzurpiranom vlašću, grupom zlonamjernih osoba ili osoba koje djeluju u ime ili u vezi sa bilo kojom političkom organizacijom, zavjerom, konfiskacijom, nasilnim preuzimanjem, rekvizicijom ili uništenjem ili štetom načinjenom po naređenju bilo koje Vlade de iure ili de facto ili bilo koje javne vlasti;
b) nuklearnom reakcijom, nuklearnom radijacijom ili radioaktivnom kontaminacijom;
c) voljnim činjenjem ili voljnim propuštanjem činjenja od strane osiguranika ili lica koja ga zastupaju;
d) potpunom ili djelimičnom obustavom rada

U bilo kakvoj parnici ili drugom postupku u kojima Osiguravač tvrdi da, prema odredbama gore navedenog isključenja pod a), bilo kakav gubitak, uništenje, oštećenje ili odgovornost nijesu pokriveni ovim osiguranjem teret dokazivanja da su takav gubitak, uništenje, oštećenje ili odgovornost pokriveni je na osiguraniku.

Period pokrića

Obaveza osiguravača počinje, bez obzira na bilo koji datum koji bi bio suprotan datumu navedenom u polisi osiguranja, odmah po započinjanju radova ili nakon istovara predmeta osiguranja, navedenih u polisi, na mjesto izvođenja radova. Obaveze osiguravača prestaju za djelove osiguranih radova koji su preuzeti ili stavljeni u upotrebu.

Osiguranje ističe najkasnije na datum naveden u polisi. Bilo kakvo produženje perioda osiguranja je moguće samo uz prethodnu pismenu saglasnost osiguravača.

GEORGIOS KARKANIAS
PRESIDENT

3/12/18

Opšti uslovi

1. Poštovanje i ispunjenje ovih Posebnih uslova, ukoliko se oni odnose na bilo šta što osiguranik treba da učini, ili u skladu sa čim treba da postupi i istinitost iskaza i odgovora u upitniku i ponudi, datoj od strane osiguranika, su preduslov za bilo kakvu odgovornost osiguravača.
2. Obrazac tabelarnog priloga uz polisu (schedule) i Odjeljci će se smatrati sastavnim dijelom ovih Posebnih uslova, a izraz „Posebni uslovi" kad god se koristi u ovom ugovoru podrazumijevaće ujedno Obrazac tabelarnog priloga polise (Schedule) i Odjeljke. Bilo koja riječ ili izraz kojima je pripisano posebno značenje u bilo kom dijelu ovih Posebnih uslova ili Obrasca tabelarnog priloga uz polisu (schedule) ili Odeljaka nosiće takvo značenje gdje god se pojave.
3. Osiguranik će o sopstvenom trošku preduzeti sve razumne preventivne mjere i postupiće u skladu sa svim razumnim preporukama osiguravača u cilju sprečavanja štete ili odgovornosti i poštovati sve zakonske uslove i preporuke proizvođača.
4. a) Predstavnici osiguravača imaju pravo da, u bilo koje razumno vrijeme, izvrše pregled i ispitaju rizik, a osiguranik je obavezan da predstavnicima osiguravača dostavi sve detalje i informacije neophodne za procjenu rizika.
   b) Osiguranik je obavezan da odmah obavijesti osiguravače telegramom i u pisanoj formi o bilo kakvoj promjeni rizika i da preduzme, o svom trošku, sve dodatne mjere obezbjeđenja, prema datim okolnostima, s tim što će obim pokrića i premija, po potrebi, biti usklađeni.

Osiguranik ne može vršiti bilo kakve materijalne izmjene, niti priznanja, kojima se rizik povećava, dok osiguravači pismeno ne potvrde nastavak osiguranja u tom slučaju.

5. U slučaju bilo kakvog događaja koji bi mogao da dovede do zahtjeva po osnovu ove Polise, osiguranik je obavezan da:

a) odmah obavijesti osiguravača telefonom ili telegramom, kao i u pisanoj formi, navodeći prirodu i obim štete;
b) preduzme sve mjere koje su u njegovoj moći kako bi smanjio obim štete;
c) sačuva oštećene djelove i učini ih dostupnim za pregled predstavnicima osiguravača ili procjeniteljima;
d) dostavi sve informacije ili pismene dokaze koje osiguravač zahtijeva;
e) obavijesti policiju u slučaju štete koja je posljedica krađe ili provalne krađe.

6. Osiguravači nijesu odgovorni za štetu za koju nijesu primili nikakvo obavještenje od osiguranika u roku od 14 dana od dana nastanka osiguranog slučaja. Nakon obavještavanja osiguravača, osiguranik može da izvrši popravke ili zamjene kod manjih oštećenja; u svim drugim slučajevima predstavniku osiguravača biće omogućeno da pregleda oštećenja prije bilo kakvih popravki ili izmjena. Ako predstavnik osiguravača ne izvrši pregled u roku koji se može smatrati odgovarajućim prema okolnostima slučaja, tada osiguranik ima pravo da vrši popravke i zamjene. Obaveze osiguravača, po ovim Posebnim uslovima, u pogledu bilo kakve stvari koja je pretrpjela štetu prestaju ukoliko oštećena stvar nije valjano popravljena bez odlaganja.
   Osiguranik će, o trošku osiguravača, učiniti, saglasiti se činjenjem ili dozvoliti činjenje akata i radnji koje su neophodne ili koje zahtijeva osiguravač u cilju ostvarenja prava, upotrebe pravnog sredstva, dobijanja olakšica ili ostvarenja naknade od drugih lica (osim onih koja su osigurana po osnovu polise izdate po ovim Posebnim uslovima) na koje je osiguravač ovlašćen ili u pogledu kojih ima pravo regresa, a po isplati naknade ili popravci za bilo koju štetu po polisi izdatoj po ovim Posebnim uslovima, bez obzira da li su takvi akti i radnje postale neophodne ili ih osiguravač zahtijeva prije ili poslije isplate naknade osiguraniku.

7. U slučaju neslaganja u pogledu iznosa koji treba isplatiti po osnovu polise izdate po ovim Posebnim uslovima (pri čemu je utvrđen osnov) za takve sporove će biti nadležan Arbitar koga će imenovati, u pisanoj formi, strane u sporu, a ako se strane ne slože oko imenovanja jednog Arbitra, tada će biti nadležna dva Arbitra, od kojih će svaka od strana pismeno imenovati jednog u roku od jednog kalendarskog mjeseca po zahtjevu neke od strana, ili, u slučaju da se Arbitri ne slože, nadležan će biti Predsjedavajući arbitraže koga će imenovati Arbitri prije upuštanja u postupak. Predsjedavajući arbitar će zasijedati sa Arbitrima i predsjedavati njihovim sastancima. Donošenje odluke od strane arbitara će biti preduslov za podnošenje tužbe protiv osiguravača.

8. Ukoliko je zahtjev u bilo kom pogledu prevaran, ili sadrži ili je potkrijepljen bilo kakvim lažnim iskazom, ili ukoliko se osiguranik ili bilo ko drugi ko postupa za njegov račun posluži bilo kakvim neistinitim sredstvima ili postupcima u cilju ostvarivanja koristi po polisi izdatoj po ovim Posebnim uslovima, ili ako potraživanje bude odbijeno, a nikakav postupak ili parnica ne bude pokrenuta u roku od tri mjeseca po odbijanju, ili u

GEORGIOS KARKANIAS
PRESIDENT

3/12/19

slučaju arbitraže, kao što je predviđeno, u roku od tri mjeseca nakon što Arbitar ili Arbitri ili Predsjedavajući arbitar donesu odluku, prestaje svako pravo na naknadu po osnovu polise izdate na osnovu ovih Posebnih uslova.

9. Ukoliko u vrijeme podnošenja zahtjeva po polisi izdatoj po ovim Posebnim uslovima postoji drugo osiguranje koje pokriva istu štetu ili odgovornost, osiguravač neće biti u obavezi da plati više od srazmjernog dijela u odnosu na takvu štetu ili odgovornost.

Odjeljak I – Materijalna šteta

Ukoliko u bilo kom trenutku tokom perioda pokrića predmeti-stavke ili bilo koji njihov dio koji su navedeni u tabelarnom prilogu polise (Schedule) izdate po ovim Posebnim uslovima pretrpe bilo kakav nepredviđeni ili iznenadni fizički gubitak ili oštećenje iz bilo kog razloga, izuzev onih koji su posebno isključeni, na način koji iziskuje popravku ili zamjenu, osiguravač je obavezan da isplati osiguraniku naknadu za takvu štetu bilo plaćanjem u gotovini, zamjenom ili popravkom (prema sopstvenom izboru) do iznosa koji, za svaku od stavki navedenih u tabelarnom prilogu polise (schedule) izdate po ovim Posebnim uslovima, ne prelazi sumu koja stoji pored tih stavki i koja ni u jednom slučaju ne prelazi limit odgovornosti tamo gdje je on primjenljiv i koja ne prelazi, u ukupnom zbiru, ukupnu sumu osiguranja navedenu u tabelarnom prilogu polise (schedule).

Osiguravač će takođe osiguraniku nadoknaditi troškove uklanjanja ostataka (raščišćavanja ruševina) nakon svakog događaja koji mu daje pravo na zahtev po ovoj polisi pod uslovom da je posebna suma ugovorena i upisana u tabelarni prilog polise izdate po ovim Posebnim uslovima.

Posebna isključenja po Odjeljku I

Osiguravač ni u kom slučaju nije u obavezi da naknadi:

a) Iznos franšize naveden u tabelarnom prilogu polise izdate po ovim Posebnim uslovima koji osiguranik snosi po svakom štetnom događaju;

b) posljedične štete bilo koje vrste uključujući ugovorne kazne, štete nastale usljed kašnjenja, neizvršenja obaveze, raskida ugovora;

c) štete zbog greške u projektu;

d) troškove zamjene, popravke ili ispravke neispravnog materijala i/ili radova, s tim što je ovo isključenje ograničeno na stavke neposredno pogođene i neće se smatrati isključenim štete na ispravno izvršenim pozicijama koje su oštećene usljed neispravnih materijala i radova;

e) habanje, koroziju, oksidaciju, pogoršavanje usljed nekorišćenja i normalnih atmosferskih uslova;

f) mehaničke i/ili električne kvarove ili neispravnosti građevinske opreme, opreme i građevinske mehanizacije;

g) štete prouzrokovane vozilima za javni saobraćaj, plovnim sredstvima ili letjelicama;

h) gubitak ili štetu nastalu na dokumentima, crtežima, računima, mjenicama, novcu, markama, spisima, evidentiranju dugova, komercijalnim zapisima, hartijama od vrijednosti, čekovima;

i) štete otkrivene tek u vrijeme pravljenja popisa (inventara).

Odredbe koje se primjenjuju na Odjeljak I

Memo 1 – Osigurane sume: Sume osiguranja navedene u tabelarnom prilogu polise – schedule izdate po ovim Posebnim uslovima ne smiju biti manje od:

za stavku 1: pune vrijednosti ugovorenih radova u vrijeme završetka izgradnje, uključujući sve materijale, zarade, vozarinu, carinske troškove, dažbine i materijale koje isporučuje naručilac;

GEORGIOS KARKANIAS
PRESIDENT

3/12/18

za stavke 2 i 3: novonabavnu vrijednost građevinske opreme, opreme i mehanizacije za izvođenje radova, što znači troškove zamjene osiguranih stavki novima iste vrijednosti i kapaciteta,

a osiguranik je obavezan da uveća ili smanji sume osiguranja u slučaju bilo kakvih materijalnih promjena u nivou plata ili cijena, uvijek pod uslovom da takvo uvećanje ili smanjenje stupa na snagu tek pošto ga osiguravač unese u polisu.

Ako, u slučaju štete, bude ustanovljeno da su sume osiguranja manje od iznosa na koji osiguranje treba da bude zaključeno, onda će se iznos naknade iz osiguranja koji osiguranik može da naplati po osnovu polise izdate po ovim Posebnim uslovima umanjiti srazmjerno odnosu osigurane sume prema sumi osiguranja na koju je osiguranje trebalo da bude izvršeno. Svaki predmet i trošak podliježe ovom uslovu zasebno.

Memo 2 – Osnovi za likvidaciju štete: u slučaju bilo kakve štete, osnov za likdivaciju štete po ovoj polisi će biti:

a) u slučaju štete koja se može popraviti - troškovi popravke potrebni da se predmeti vrate u stanje neposredno prije nastanka štete umanjeno za vrijednost spašenog, ili

b) u slučaju totalne štete – stvarna vrijednost predmeta neposredno prije gubitka umanjeno za vrijednost spašenog;

ali samo u obimu u kome je zahtijevane troškove morao da snosi osiguranik i u obimu u kome su isti obuhvaćeni sumama osiguranja i uvijek pod uslovom da su poštovane ugovorene odredbe i ovi Posebni uslovi.

Osiguravač će izvršiti isplatu tek nakon dostavljanja potrebnih računa i dokumenata koji potvrđuju da su popravke izvršene ili da je izvršena zamjena, prema okolnostima slučaja. Svaka šteta koja se može popraviti biće popravljena, ali ako su troškovi popravke bilo koje štete jednaki ili veći od vrijednosti predmeta neposredno prije nastanka štete, šteta će biti likvidirana kao što je navedeno gore pod b).

Troškove bilo kakvih privremenih popravki snosiće osiguravači ako takve popravke čine dio konačnih popravki i ne uvećavaju ukupne troškove popravki.

Troškovi bilo kakvih izmjena, dodataka i/ili poboljšanja nijesu pokriveni polisom koja se izdaje po ovim Posebnim uslovima.

Odjeljak II – Odgovornost za štete pričinjene trećim licima

Osiguravači će isplatiti osiguraniku naknadu do iznosa, ali ne preko iznosa navedenog u tabelarnom prilogu polise (schedule) po ovim Posebnim uslovima za sume koje osiguranik bude po zakonu obavezan da plati za štete koje su posljedica

a) slučajne tjelesne povrede ili bolesti trećih lica (bilo smrtne ili ne)
b) slučajne štete na imovini koja pripada trećim licima,

a koje se dese u neposrednoj vezi sa izgradnjom ili montažom stavki osiguranih po osnovu Odjeljka I polise izdate po ovim Posebnim uslovima ili u neposrednoj blizini mjesta izvođenja radova tokom perioda osiguranja.

Pored zahtjeva za naknadu na koji se navedeno osiguranje odnosi, osiguravač će osiguraniku naknaditi i:
a) sve troškove parničnog postupka koje oštećeni naplati od osiguranika i
b) sve troškove sa kojima su se osiguravači pismeno saglasili,
uvijek pod uslovom da obaveze osiguravača po osnovu ovog odjeljka ne prelaze limit odgovornosti naveden u Tabelarnom prilogu polise (schedule).

Posebna isključenja po Odjeljku II

Osiguravač nije obavezan da osiguraniku plati naknadu za:

1. iznos franšize naveden u tabelarnom prilogu polise (schedule) izdate po ovim Posebnim uslovima koji snosi osiguranik po svakom osiguranom slučaju;

2. troškove nastale prilikom činjenja, ponovnog činjenja, popravke ili zamjene bilo čega što je pokriveno ili se može pokriti po osnovu Odjeljka I ovih Posebnih uslova;

GEORGIOS KARKANIAS
PRESIDENT

3/12/18

3. štete na imovini, zemljištu ili objektima prouzrokovane vibracijama, uklanjanjem ili slabljenjem potpora, kao i štete usljed tjelesnih povreda lica ili oštećenja imovine koje su se desile ili proizilaze iz ovakvih šteta (izuzev ukoliko nije posebno ugovoreno odgovarajućim prilogom)

4. odgovornosti koja je posljedica:
   a) tjelesne povrede ili bolesti zaposlenih ili radnika izvođača radova, naručioca ili neke druge firme koja je u vezi sa projektom koja je ili čiji je dio osiguran po osnovu Odjeljka I, kao i članova njihovih porodica;
   b) štete na imovini koja pripada ili je u državini, pod nadzorom, staranjem ili kontrolom izvođača radova, naručioca ili neke druge firme koja je povezana sa radovima koja je ili čiji je dio osiguran po osnovu Odjeljka I, kao i zaposlenih ili radnika bilo koga od gore pomenutih;
   c) bilo kakve nezgode prouzrokovane vozilima za javni saobraćaj, plovnim sredstvima ili letjelicama;
   d) bilo kakvog sporazuma osiguranika o plaćanju bilo kakve sume u vidu naknade ili nekom drugom vidu, izuzev ukoliko bi to bila obaveza i u odsustvu takvog sporazuma.

Posebni uslovi koji se primjenjuju na Odjeljak II

1. Osiguranik ne može dati ili učiniti nikakvo priznanje, ponudu, obećanje, plaćanje ili naknadu bez pismene saglasnosti osiguravača koji ima pravo da, ukoliko to želi, preuzme i vodi u ime osiguranika odbranu ili rješavanje bilo kakvog zahtjeva ili da sudski potražuje za svoj račun i u ime osiguranika bilo kakvu naknadu ili odštetu i ima puna ovlašćenja u vođenju bilo kakvih sudskih postupaka ili u rješavanju bilo kakvog zahtjeva, a osiguranik je obavezan da obezbijedi sve informacije i pruži pomoć koju osiguravač zahtijeva.

2. Osiguravač može da u pogledu bilo kakve nezgode plati osiguraniku sumu označenu kao limiti odgovornosti po osiguranom slučaju (umanjeno za bilo koju sumu plaćenu kao naknada po tom osnovu) ili bilo kakvu manju sumu kojom se potraživanje ili potraživanja proistekla iz takvog osiguranog slučaja mogu riješiti, nakon čega osiguravač nema nikakvu dalju obavezu po pogledu tog osiguranog slučaja po ovom Odjeljku.

Odjeljak III – Gubitak buduće dobiti naručioca

Osiguravač će isplatiti naknadu iz osiguranja osiguraniku koji je označen kao Naručilac u Tabelarnom prilogu polise izdate po ovim uslovima u pogledu gubitka bruto dobiti koju stvarno pretrpi usljed smanjenja u obimu poslovanja i povećanim troškovima rada, kako je definisano u ovom odjeljku, ako bilo kada u toku perioda osiguranja utvrđenom u Tabelarnom prilogu polise izdate po ovim uslovima osigurani radovi ili bilo koji njihov dio pretrpe štetu koja je pokrivena po Odjeljku 1 ovih uslova, izuzev ako je izričito isključena ovim odjeljkom, uzrokujući time uticaj na građevinske radove što ima posljedicu kašnjenje u započinjanju i/ili uticaj na osigurane poslove, (u daljem tekstu označeno kao kašnjenje).

Iznos koji se plaća po ovom osnovu na ime naknade iz osiguranja će biti:
- u pogledu bruto dobiti: suma koja se dobija primjenom stope bruto dobiti na iznos za koji je stvarni obim poslovanja umanjen, a koji bi se postigao da kašnjenje nije nastalo
- u pogledu povećanih troškova poslovanja: dodatni troškovi koji su neophodni i opravdani isključivo za svrhu izbjegavanja ili minimiziranja umanjenja u obimu poslovanja koji bi, bez takvih troškova, nastali za vrijeme perioda odgovornosti, ali koji ne prelaze sumu koja se dobija primjenom stope bruto dobiti na iznos smanjenja u obimu poslovanja koji se time izbjegava.

Ako je godišnja suma osiguranja manja nego suma koja se dobija primjenom stope bruto dobiti na godišnji obim poslovanja, tada će naknada iz osiguranja koja se plaća biti proporcionalno umanjena.

GEORGIOS KARKANIAS
PRESIDENT

3/12/18

Definicije

Period osiguranja

Period osiguranja je onaj period koji je naveden u Tabelarnom prilogu polise izdate po ovim uslovima i završava se na dan naveden u Tabelarnom prilogu polise ili bilo kada ranije ukoliko osiguranje za materijalne štete po Odeljku 1 ovih uslova prestane.

Planirani datum početka osiguranog posla

Datum naveden u Tabelarnom prilogu polise izdate po ovim uslovima ili naknadno izmijenjen datum kada je posao trebalo da počne da se nije desilo kašnjenje.

Period odgovornosti

Period u kome na rezultate poslovanja utiču posledice kašnjenja, koji počinje na utvrđeni datum početka osiguranog posla i koji ne prelazi maksimalni period naveden u Tabelarnom prilogu uz ovaj odjeljak.

Vremenska franšiza

Period naveden u Tabelarnom prilogu uz ovaj odjeljak za koji osiguravač nije odgovoran. Odgovarajući iznos će biti obračunat množenjem prosječne dnevne vrijednosti štete koja se trpi za vrijeme Perioda odgovornosti sa brojem dana koji su određeni kao vremenska franšiza.

Promet

Novčani iznos (umanjen za odobrene popuste) koji je plaćen ili plativ osiguraniku za najam prostora ili druge usluge pružene tokom obavljanja osiguranog posla u poslovnim prostorijama.

Godišnji promet

Promet koji bi, da do odlaganja nije došlo, bio postignut u toku 12 mjeseci od planiranog dana otpočinjanja osiguranog posla.

Godišnja bruto dobit

Iznos za koji vrijednost godišnjeg prometa premašuje iznos specificiranih troškova poslovanja.

Specificirani troškovi poslovanja su bilo koji varijabilni troškovi, npr. troškovi u vezi kupovine roba, materijala kao i troškovi za nabavke i usluge (izuzev ako su potrebni za održavanje poslovanja) i bilo koji troškovi na ime poreza na promet, poreza na nabavku, licenci, naknada i sl. u mjeri u kojoj su takvi troškovi zavisni od prometa.

Stopa bruto dobiti

Stopa koja bi, da se nije desilo kašnjenje, bila ostvarena na promet ostvaren u periodu odgovornosti.

Posebna isključenja po Odjeljku 3

Osiguravač nije odgovoran za:

1. Gubitak bruto dobiti i /ili povećane troškove poslovanja zbog bilo kakvog kašnjenja uzrokovanog ili nastalog usljed:

1.1. štete pokrivene po Odjeljku 1 putem priloga (endorsmenta) ukoliko to nije posebno ugovoreno u pismenoj formi,
1.2. zemljotresa, vulkanske erupcije, cunamija, ukoliko to nije posebno ugovoreno u pismenoj formi,
1.3. štete na okolnoj imovini, opremi i mehanizaciji za izvođenje radova,
1.4. štete na potrošnim sredstvima i sirovinama, manjka, uništenja, pogoršanja na bilo kojim materijalima neophodnim za osigurani posao,
1.5. bilo kakvih zabrana koje nametnu javne vlasti,
1.6. nedostupnosti fondova,

GEORGIOS KARKANIAS
PRESIDENT

3/12/18

1.7. izmjena, dodataka, poboljšavanja, ispravki, oštećenja ili grešaka ili uklanjanja nedostataka nastalih poslije štetnog događaja,
1.8. štete na predmetima preuzetim ili stavljenim u upotrebu od strane osiguranika za koje je pokriće po Odeljku 1 polise izdate po ovim uslovima prestalo;

2. bilo koje štete usljed ugovornih kazni ili naknada za povredu ugovora, kašnjenje ili neizvršenje porudžbina, ili za kazne bilo koje vrste;

3. gubitka posla usljed razloga kao što su obustava, istek ili otkaz zakupa, licence ili porudžbine i dr. koji se desi poslije dana stvarnog početka posla;

4. šteta na građevinskim radovima koji imaju prirodu prototipa, ukoliko nije posebno ugovoreno putem priloga;

Odredbe koje se primjenjuju na Odjeljak 3

Memo 1 – Produženje perioda

Bilo koje produženje perioda osiguranja po Odjeljku 1 ovih uslova ne vodi automatski produženju perioda osiguranja navedenom u Tabelarnom prilogu uz ovaj odjeljak.

Bilo koje produženje perioda osiguranja po ovom Odjeljku osiguranik mora tražiti čim je u mogućnosti, navodeći okolnosti koje su dovele do potrebe za produženjem, a takvo produženje će imati djejstvo na ovaj odjeljak samo ako je posebno ugovoreno u pismenoj formi.

Bilo koja izmjena ugovorenog datuma otpočinjanja osiguranog posla će biti prijavljena u pismenoj formi i imaće djejstvo na ovaj Odjeljak samo ako je posebno ugovorena u pismenoj formi.

Memo 2 – Osnove za likvidaciju šteta

Pri obračunu stope bruto dobiti i godišnjeg prometa, sljedeće stavke će posebno biti uzete u obzir:

a) rezultati osiguranog posla u periodu od 12 mjeseci poslije otpočinjanja;

b) izmjene ili posebne okolnosti koje bi imale uticaja na osigurani posao da se kašnjenje nije desilo;

c) izmjene i posebne okolnosti od uticaja na osigurani posao nakon otpočinjanja;

tako da konačni iznosi predstavljaju, što je bliže moguće, razumno ostvarive rezultate koji bi bili postignuti obavljanjem osiguranog posla posle ugovorenog datuma da se kašnjenje nije desilo

Memo 3 – Povraćaj premije

Ako osiguranik dokaže (uz potvrdu osiguranikovog revizora) da je bruto dobit za vrijeme obračunskog perioda od 12 mjeseci poslije početka osiguranog posla ili datuma na koji je trebalo, ali zbog kašnjenja osigurani posao nije otpočeo, bila manja od sume na koju je izvršeno osiguranje, tada će biti izvršen povraćaj premija pro-rata, najviše do iznosa trećine plaćene premije, na ime takve razlike.

U slučaju nastanka štete po osnovu koje osiguranik ima pravo na zahtjev po osnovu ovih uslova, povraćaj će biti izvršen samo za onaj dio gore navedene razlike koji se ne duguje po osnovu takve štete.

Posebni uslovi koji se primjenjuju na Odjeljak 3

1. Osiguranik je obavezan da osiguravaču dostavi ažurirane izvještaje u periodima navedenim u Tabelarnom prilogu uz ovaj odjeljak.
2. U slučaju bilo kakve izmjene u originalnom riziku kao što su:
   - izmjene u utvrđenom dinamičkom planu,
   - izmjene, modifikacije ili dodaci bilo kojoj stavci radova,
   - napuštanje propisanih građevinskih metoda,
   - izmjene u osiguranikovom poslovanju (kao što je prekid u poslovanju, likvidacija ili prinudna uprava),

GEORGIOS KARKANIAS
PRESIDENT

3/12/18

polisa izdata po ovim uslovima će se smatrati raskinutom dok njen nastavak ne bude pismeno potvrđen od strane osiguravača

3. U slučaju bilo kog događaja koji može uzrokovati kašnjenje i dati osnov za zahtjev po ovom odjeljku:

   a) osiguranik je obavezan da odmah obavijesti osiguravača telefonom ili telegramom i da pismeno potvrdi obavještenje u roku od 48 sati od događaja;
   b) osiguranik će preduzeti i dozvoliti da se preduzmu sve aktivnosti koje su razumno ostvarive u cilju smanjenja ili ustanovljenja obima uticaja na građevinske radove i u cilju sprečavanja ili minimiziranja kašnjenja koje usljed toga nastane;
   c) osiguravač i bilo koje lice koje ovlasti osiguravač će, bez obaveza prema bilo kojoj strani osiguranoj ovim uslovima, imati pristup mjestu izvođenja radova gdje se dogodila šteta u cilju direktnih pregovora sa odgovornim izvođačem ili podizvođačem radi ustanovljenja mogućih uzroka i obima štete, njenih uticaja na osigurane rizike, ispitivanja mogućnosti za smanjenja kašnjenja planiranog početka osiguranog posla i, ako je neophodno, radi davanja razumnih preporuka za izbjegavanje ili smanjenje takvog kašnjenja.

   Ovaj uslov će biti dokaz o saglasnosti i ovlašćenje osiguranika da osiguravač može to učiniti. Ako osiguranik ili drugo lice koje djeluje u njegovo ime sprečava ili otežava osiguravača za vrijeme gore navedenih aktivnosti ili ne ispunjava takve preporuke osiguravača, osiguranik će izgubiti sva prava po ovom odjeljku.

4. U slučaju zahtjeva po ovom Odjeljku, osiguranik će o svom trošku dostaviti osiguravaču najkasnije u roku od 30 dana od kašnjenja, ili u toku naknadnog perioda ukoliko ga osiguravač odobri u pismenoj formi, pismenu izjavu navodeći detalje svog zahtjeva. Pored toga, osiguranik će o svom trošku obezbijediti i dostaviti osiguravaču knjigovodstvene dokumente i poslovne knjige npr. račune, bilanse i druge dokumente, dokaze, informacije, objašnjenja ili druge dokaze koje osiguravač ima pravo da zahtijeva u razumnoj mjeri u cilju istraživanja i provjeravanja zahtjeva zajedno sa, ako osiguravač to traži, ovjerenom izjavom o istinitosti zahtjeva i stvari povezanih sa zahtjevom.

5. Naknada iz osiguranja dospijeva za naplatu mjesec dana po konačnom utvrđivanju iznosa naknade. Bez obzira na gore navedeno osiguranik može, mjesec dana nakon što je osiguravač na propisan način obaviješten i pošto je priznao odgovornost, zahtijevati na ime avansa isplatu iznosa koji je plativ na osnovu nesumnjivih okolnosti.

   Osiguravač je ovlašćen da odloži isplatu naknade iz osiguranja

   a) ako postoji sumnja u pravo osiguranika da primi naknadu, dok se neophodni dokazi ne dostave
   b) ako, kao rezultat štete ili kašnjenja planiranog početka osiguranog posla policija ili istražni organi pokrenu istragu, do okončanja takve istrage

Osiguravač nije obavezan da plati kamatu ili naknadu za neisplaćeni iznos osim zatezne kamate

Opšte odredbe

Sastavni dio ovih Posebnih uslova su i dolje navedeni Prilozi, kojima se u zavisnosti od vrste radova, načina izvođenja, prirodnih ili bilo kojih drugih okolnosti i uslova (koji se odnose ili utiču na izvođenje radova), vrše dopune, proširenja, suženja, isključenja ili druge izmjene ovih Posebnih uslova.

Prilozi:

001	Pokriće za štete prouzrokovane štrajkovima, pobunama i građanskim nemirima
002	Pokriće za uzajamnu odgovornost
003	Osnovno pokriće u periodu održavanja
004	Prošireno pokriće u periodu održavanja
005	Posebni uslovi za dinamički plan izgradnje i/ili montaže
006	Pokriće za dodatne troškove za prekomjerni rad, noćni rad, rad u dane državnih praznika i ekspresni prevoz
007	Pokriće za dodatne troškove avionskog prevoza
008	Pokriće za građevine u zonama zemljotresa
009	Isključenje pokrića za štetu ili odgovornost usljed zemljotresa
010	Isključenje pokrića za štetu ili odgovornost usljed poplave i izlivanja
012	Isključenje pokrića za štetu ili odgovornost usljed oluje ili šteta prouzrokovanih vodom usljed oluje
013	Imovina u skladištima van mjesta izvođenja radova
014	Isključenje pokrića za štetu ili odgovornost usljed terorizma
100	Pokriće za testiranje mašina i instalacija
101	Posebni uslovi za izgradnju tunela, galerija, privremenih ili trajnih podzemnih građevina ili instalacija
102	Posebni uslovi za podzemne kablove, cijevi i druge instalacije
103	Isključenje pokrića za štete na usjevima, šumama i kulturama
104	Posebni uslovi za izgradnju brana i rezervoara za vodu
106	Pokriće za dionice
107	Pokriće za kampove i skladišta
108	Pokriće za građevinsku opremu i mehanizaciju
109	Pokriće za građevinski materijal
110	Posebni uslovi u pogledu bezbjednosnih mjera koje se odnose na padavine, poplave i izlivanje
111	Posebni uslovi za uklanjanje ruševina sa klizišta
112	Posebni uslovi u pogledu protivpožarnih uređaja i protivpožarnih mjera na gradilištima
113	Kopneni transport
114	Serijske štete
115	Pokriće za rizik projektovanja
116	Pokriće za osigurane ugovorene radove koji su preuzeti ili stavljeni u upotrebu
117	Posebni uslovi za postavljanje vodovoda i kanalizacije
118	Bušenje za izvorišta vode
119	Postojeća imovina ili imovina koja pripada ili je u državini, pod nadzorom ili kontrolom osiguranika
120	Vibracije, uklanjanje ili slabljenje potpora, oslonca ili nosećih konstrukcija
121	Posebni uslovi za pobijanje šipova i radove na potpornim zidovima
200	Rat i Terorizam
201	Isključenje rizika radioaktivne kontaminacije, hemijskog, biološkog, biohemijskog i elektromagnetnog oružja
202	Elektronski podaci
203	Isključenje političkih rizika, finansijskih garancija i kreditnih rizika
204	Industrije,curenje, zagađenje i kontaminacija
205	Isključenje rizika od azbesta
206	Isključenje odgovornosti za rizik od ograničenog neispravnog stanja (DE 3)
207	Isključenje rizika od unapređenja projekta (DE 5)
208	Rizici u vezi sa vodom
209	72 časa
210	Podjela 50/50
211	Automatsko ponovno pokriće do sume osiguranja

Prilog 001 – Pokriće za štete prouzrokovane štrajkovima, pobunama i građanskim nemirima

Ugovoreno je i podrazumijeva se da će, nasuprot rokovima, isključenjima, odredbama i uslovima sadržanim u polisi ili prilozima uz polisu i pod uslovom da je osiguranik platio ugovorenu dodatnu premiju osiguranje biti prošireno tako da pokriva štetu nastalu usljed štrajka, pobune i građanskih nemira, što će za potrebe ovog priloga značiti (uvijek pod Posebnim uslovima koji su navedeni u daljem tekstu) gubitak ili oštećenje osigurane imovine koji su neposredno prouzrokovani:

1. radnjama lica koje učestvuje sa drugim licima u bilo kakvom remećenju javnog mira (bilo u vezi sa štrajkom ili prisilnim zatvaranjem poslovnog prostora ili ne) koje ne spadaju pod uslov 2 dolje navedenih Posebnih uslova,
2. djelovanjem zakonski konstituisane vlasti prilikom suzbijanja ili pokušaja suzbijanja takvog ometanja ili prilikom ublažavanja posljedica takvog ometanja,
3. voljnim činom nekog štrajkača ili radnika zatvorenog u poslovnom prostoru sa ciljem nastavljanja štrajka ili pružanja otpora prisilnom zatvaranju poslovnog prostora od strane poslodavca,
4. djelovanjem zakonski konstituisane vlasti prilikom sprečavanja ili pokušaja sprečavanja nekog takvog čina ili prilikom ublažavanja posljedica nekog takvog čina.

S tim što je izričito ugovoreno i potvrđuje se da:

1. svi rokovi, isključenja, odredbe i uslovi ove Polise važe u svakom pogledu za osiguranje izdato ovim proširenjem, osim ukoliko isti nisu izričito izmijenjeni sljedećim Posebnim uslovima, a svako pominjanje gubitka ili štete u tekstu ove Polise podrazumijevaće opasnosti koje su ovim osigurane,
2. Sljedeći Posebni uslovi važiće samo za osiguranje izdato ovim proširenjem, a tekst polise odnosiće se u svakom pogledu na osiguranje dato polisom kao da ovaj Prilog nije dodat.

Posebni uslovi

1 Ovo osiguranje ne pokriva:

a) štetu nastalu kao posljedica potpune ili djelimične obustave rada ili ometanja, prekida ili obustave nekog procesa ili aktivnosti,
b) štetu prouzrokovanu trajnim ili privremenim oduzimanjem imovine koje je posljedica konfiskacije, plenidbe ili rekvizicije od strane zakonski konstituisane vlasti,
c) štetu prouzrokovanu trajnim ili privremenim oduzimanjem bilo kog objekta koje je posljedica nezakonitog zauzimanja tog objekta od strane nekog lica,
d) posljedičnu štetu ili odgovornost bilo koje vrste, bilo kakvu isplatu koja premašuje ovdje ugovorenu naknadu za materijalnu štetu koje se ovim pokriva

s tim što osiguravač nije oslobođen odgovornosti, po gore navedenim tačkama b) i c), prema osiguraniku u pogledu fizičkog oštećenja osigurane imovine koje se dogodilo prije oduzimanja ili tokom privremenog oduzimanja imovine.

GEORGIOS KARKANIAS PRESIDENT

3/12/18

2 Ovo osiguranje ne pokriva štete koje su prouzrokovane ili su nastale kao posljedica, neposredno ili posredno, nekog od sljedećih događaja, i to:

a) rata, invazije, djelovanja stranog neprijatelja, neprijateljstva ili ratne operacije (bilo da je rat zvanično objavljen ili ne), građanskog rata,

b) bune, građanskih nemira koji se šire ili dostižu razmjere narodnog ustanka, vojnog ustanka, ustanka, pobune, revolucije, vojne ili uzurpirane vlasti,

c) bilo kakvog čina lica koje djeluje u korist ili u vezi sa nekom organizacijom čije su djelatnosti usmjerene ka nasilnom zbacivanju vlade de jure ili de facto ili ka vršenju uticaja na vladu putem terorizma ili nasilja.

U bilo kom sporu, sudskom ili nekom drugom postupku u kome osiguravač tvrdi da obzirom na odredbe ovih uslova šteta nije pokrivena osiguranjem, teret dokazivanja da je takva šteta pokrivena snosi osiguranik.

3 Osiguravač može u bilo kom trenutku raskinuti ovo osiguranje obavijestivši u tom smislu osiguranika preporučenom poštanskom pošiljkom poslatom na posljednju poznatu adresu osiguranika, u kom slučaju je osiguravač obavezan da izvrši povraćaj srazmernog dijela premije za period od datuma raskida do isteka perioda osiguranja.

4 Podrazumijeva se da je limit odgovornosti po bilo kom osiguranom slučaju kao što je dolje navedeno ograničen na naknadu za štete pokrivene ovim Prilogom tokom neprekidnog perioda od 168 sati.

Ukupni limit odgovornosti osiguravača tokom perioda osiguranja po osim uslovima je ograničen na dvostruki iznos limita odgovornosti po jednom osiguranom slučaju.

Limit odgovornosti:	**po jednom osiguranom slučaju**
Franšiza:	**po jednom osiguranom slučaju**

Prilog 002 – Pokriće za uzajamnu odgovornost

Ugovoreno je i podrazumijeva se da će, nasuprot rokovima, isključenjima, odredbama i uslovima sadržanim u polisi ili prilozima uz polisu i pod uslovom da je osiguranik platio ugovorenu dodatnu premiju, pokriće za odgovornost za štete pričinjene trećim licima po polisi osiguranja biti primijenjeno na osiguranike navedene u tabelarnom prilogu polise (schedule) kao da je posebna polisa izdata za svakog osiguranika, s tim što osiguravač nije o obavezi da osiguraniku isplati naknadu po ovom Prilogu u pogledu odgovornosti za

- štete na stavkama koje su osigurane ili su se mogle osigurati po Odjeljku I Posebnih uslova za osiguranje objekata u izgradnji protiv svih rizika, čak i ako nijesu plativi zbog prekoračenja limita,

- smrti, povrede ili bolesti zaposlenih ili radnika koji su osigurani ili su mogli biti osigurani po osnovu osiguranja zaposlenih od posljedica nesrećnog slučaja ili po osnovu osiguranja od odgovornosti poslodavca.

Ukupna obaveza osiguravača prema osiguranim stranama ne može premašiti u ukupnom iznosu, po jednoj nezgodi, za više nezgoda ili serije nezgoda proisteklih iz jednog događaja limit odgovornosti naveden u tabelarnom prilogu polise (schedule).

- koje prouzrokuje osigurani izvođač radova tokom vršenja radnji u cilju ispunjavanja obaveza po osnovu ugovornih odredbi koje se odnose na održavanje.
- nastale za vrijeme perioda održavanja pod uslovom da su takve štete prouzrokovane na mjestu izvođenja radova tokom perioda izgradnje prije izdavanja potvrde o završetku radova za uništeni ili oštećeni dio radova.

Pokriće u periodu održavanja od do

Prilog 005 – Posebni uslovi za dinamički plan izgradnje i/ili montaže

Ugovoreno je i podrazumijeva se da će, nasuprot rokovima, isključenjima, odredbama i uslovima sadržanim u polisi ili prilozima uz polisu, sljedeće odredbe biti primijenjene na osiguranje:

Dinamički plan izgradnje i/ili montaže, zajedno sa drugim pismenim izjavama osiguranika datim u svrhu dobijanja pokrića po ovim uslovima, kao i tehničkim podacima koje je dostavio osiguravaču, smatra se sastavnim dijelom polise osiguranja.

Osiguravač nije obavezan da osiguraniku plati naknadu iz osiguranja za štete prouzrokovane, proistekle ili pogoršane usljed odstupanja od dinamičkog plana izgradnje i/ili montaže koji premašuje ugovoreni broj sedmica odstupanja, ukoliko se osiguravači nijesu pismeno saglasili sa takvim odstupanjem prije nastanka štete.

Odstupanje od dinamičkog plana: **sedmica**

Prilog 006 – Pokriće za dodatne troškove za prekovremeni rad, noćni rad, rad u dane državnih praznika i ekspresni prevoz

Ugovoreno je i podrazumijeva se da će, nasuprot rokovima, isključenjima, odredbama i uslovima sadržanim u polisi ili prilozima uz polisu i pod uslovom da je osiguranik platio ugovorenu dodatnu premiju osiguranje biti prošireno tako da pokriva dodatne troškove za prekovremeni rad, noćni rad, rad u dane državnih praznika i ekspresni prevoz (isključujući avionski prevoz), uvijek pod uslovom da su takvi dodatni troškovi nastali u vezi sa nekom štetom na osiguranim stavkama pokrivenim polisom osiguranja.

Ako je osigurana suma oštećenog predmeta manja od iznosa na koji je trebalo izvršiti osiguranje, tada će naknada plativa po ovom prilogu za takve dodatne troškove biti umanjena u istoj srazmjeri.

Limit odgovornosti: **po jednom osiguranom slučaju**

Dodatna premija:

Prilog 008 – Pokriće za građevine u zonama zemljotresa

Ugovoreno je i podrazumijeva se da će, nasuprot rokovima, isključenjima, odredbama i uslovima sadržanim u polisi ili prilozima uz polisu, osiguravač biti u obavezi da isplati osiguraniku naknadu iz osiguranja samo za štetu ili odgovornost prouzrokovanu zemljotresom ukoliko osiguranik dokaže da je prilikom projektovanja uzeo u obzir rizik od zemljotresa prema zvaničnim građevinskim normativima koji važe za tu lokaciju i da se pridržavao kvaliteta materijala i izrade i dimenzija na osnovu kojih su načinjeni takvi proračuni.

GEORGIOS KARKANIAS
PRESIDENT

3/12/18

Prilog 009 – Isključenje pokrića za štetu ili odgovornost usljed zemljotresa

Ugovoreno je i podrazumijeva se da, nasuprot rokovima, isključenjima, odredbama i uslovima sadržanim u polisi ili prilozima uz polisu, osiguravač nije u obavezi da osiguraniku plati naknadu za štetu ili odgovornost neposredno ili posredno nastalu usljed zemljotresa.

GEORGIOS KARKANIAS
PRESIDENT

31/12/18

Prilog 010 – Isključenje pokrića za štetu ili odgovornost usljed poplave i izlivanja

Ugovoreno je i podrazumijeva se da, nasuprot rokovima, isključenjima, odredbama i uslovima sadržanim u polisi ili prilozima uz polisu, osiguravač nije u obavezi da osiguraniku plati naknadu za štetu ili odgovornost neposredno ili posredno nastalu usljed poplave ili izlivanja.

GEORGIOS KARKANIAS
PRESIDENT

3/12/18

Prilog 012 – Isključenje pokrića za štetu ili odgovornost usljed oluje ili šteta prouzrokovanih vodom usljed oluje

Ugovoreno je i podrazumijeva se da, nasuprot rokovima, isključenjima, odredbama i uslovima sadržanim u polisi ili prilozima uz polisu, osiguravač nije u obavezi da osiguraniku plati naknadu za štetu ili odgovornost neposredno ili posredno nastalu usljed oluje koja je jednaka ili premašuje 8 stepeni po Boforovoj skali (odnosno brzinu vjetra od 62 km/h) ili bilo koju štetu prouzrokovanu vodom koja se desila u vezi ili kao posljedica takve oluje.

GEORGIOS KARKANIAS
PRESIDENT

3/12/18

Prilog 013 – Imovina u skladištima van mjesta izvođenja radova

Ugovoreno je i podrazumijeva se da će, nasuprot rokovima, isključenjima, odredbama i uslovima sadržanim u polisi ili prilozima uz polisu i pod uslovom da je osiguranik platio ugovorenu dodatnu premiju osiguranje biti prošireno tako da pokriva štetu na osiguranoj imovini (osim na imovini koja je proizvedena, prerađena ili uskladištena u prostorijama proizvođača, distributera ili dobavljača) u skladištu izvan mjesta izgradnje unutar teritorijalnih granica kako je navedeno dolje.

Osiguravači nijesu obavezni da osiguraniku plate naknadu iz osiguranja za štetu do koje je došlo zbog neprimjenjivanja uobičajenih mjera za sprečavanje šteta u magacinima ili skladištima. Takve mjere posebno uključuju sljedeće:

- skladišni prostor obavezno mora biti ograđen (bilo u zgradi ili bar ogradom), čuvan, zaštićen od požara, u skladu sa odgovarajućom lokacijom i vrstom uskladištene imovine;
- djelovi skladišta moraju biti razdvojeni protivpožarnim zidovima ili na međusobnoj udaljenosti od najmanje 50 metara;
- djelovi skladišta moraju biti smješteni i izgrađeni na način kojim se sprečava šteta koja nastaje akumuliranjem vode ili poplavama prouzrokovanim kišom, koje se statistički ponavljaju u periodu kraćem od 20 godina;
- ograničavanje vrijednosti po skladišnoj jedinici.

Teritorijalne granice:

Maksimalna vrijednost po skladišnoj jedinici:

Limit odgovornosti (po jednom osiguranom slučaju):

Franšiza: **% od iznosa štete po jednom osiguranom slučaju**

Dodatna premija:

GEORGIOS KARKANIAS
PRESIDENT

3/12/18

Prilog 014 – Isključenje pokrića za štetu ili odgovornost usljed terorizma

Ugovoreno je i podrazumijeva se da, nasuprot rokovima, isključenjima, odredbama i uslovima sadržanim u polisi ili prilozima uz polisu, osiguravač nije u obavezi da osiguraniku plati naknadu za štetu ili odgovornost neposredno ili posredno nastalu usljed terorizma.

Teroristički akt, za potrebe ovog priloga, označava akt koji uključuje ali nije ograničen na upotrebu sile ili nasilja i/ili prijetnje, od strane bilo kog lica ili grupe(a) lica, bilo da ono djeluje samo ili u ime ili u vezi sa nekom(im) organizacijom(jama) ili vladom(dama), posvećenoj(im) političkim, religioznim, ideološkim ili etničkim ciljevima ili razlozima koji uključuju namjeru da se na neku vladu izvrši uticaj i/ili da se zastraši javnost ili bilo koji dio javnosti.

Ovaj prilog takođe isključuje štete ili troškove bilo koje prirode koji su neposredno i posredno prouzrokovani ili su nastali kao posljedica bilo koje radnje sprovedene u cilju kontrole, sprečavanja i suzbijanja terorizma ili na bilo koji način povezane sa nekim terorističkim činom.

Prilikom bilo kog spora, sudskog ili nekog drugog postupka u kome osiguravači tvrde da prema odredbama ovog priloga neki gubitak, razaranje, šteta ili odgovornost nijesu pokriveni ovim osiguranjem teret dokazivanja da je takav gubitak, razaranje, šteta ili odgovornost pokrivena osiguranjem snosi osiguranik.

PRESIDENT

3/7/2018

Prilog 100 – Pokriće za testiranje mašina i instalacija

Ugovoreno je i podrazumijeva se da će, nasuprot rokovima, isključenjima, odredbama i uslovima sadržanim u polisi ili prilozima uz polisu i pod uslovom da je osiguranik platio ugovorenu dodatnu premiju osiguranje biti produženo na period testiranja ili testiranja opterećenja, ali ne duže od četiri nedjelje od datuma početka testiranja.

Ako se, međutim, dio nekog postrojenja ili jedna (ili nekoliko) mašina provjerava(ju) i/ili stavlja(ju) u pogon ili preuzima(ju), pokriće za taj određeni dio postrojenja ili mašine(a) i svaka obaveza koja odatle proističe će prestati dok će se pokriće nastaviti za preostale djelove na koje se gore navedeno ne odnosi.

Ugovoreno je i podrazumijeva se da će za mašine i instalacije koji su podvrgnuti provjeri, isključenja c) i d) iz Isključenja uz Odjeljak 1 ovih posebnih uslova biti izbrisana, a važiće sljedeće iskijučenje:

„gubitak ili štetu usljed greške u projektu, greške u materijalu ili odlivku, loše izrade osim grešaka u izgradnji:"

U slučaju polovnih predmeta, ovo osiguranje će, međutim, prestati odmah po započinjanju testiranja.

GEORGIOS KARKANIAS
PRESIDENT

3/12/18

Prilog 101 – Posebni uslovi za izgradnju tunela, galerija, privremenih ili trajnih podzemnih građevina ili instalacija

Ugovoreno je i podrazumijeva se da, nasuprot rokovima, isključenjima, odredbama i uslovima sadržanim u polisi ili prilozima uz polisu, osiguravač nije u obavezi da osiguraniku isplati naknadu iz osiguranja za troškove nastale zbog:

- izmjena u metodi izgradnje ili usljed nepredviđenih uslova terena ili prepreka,
- mjera koje postanu neophodne radi poboljšanja ili stabilizacije tla ili zaptivanja protiv prodiranja vode, ukoliko nijesu neophodne radi vraćanja u prvobitno stanje za štete za koje postoji obaveza naknade,
- uklanjanja iskopanog materijala, ili materijala van projektovanih profila i/ili radi ispunjavanja udubljenja koja odatle proisteknu,
- odvodnjavanja ukoliko nije neophodno da bi se popravila šteta za koju postoji obaveza naknade,
- štete usljed kvara na sistemu za odvodnjavanje ako se takva šteta mogla izbjeći upotrebom rezervnih uređaja,
- napuštanja ili vraćanja u prvobitno stanje mašina za bušenje tunela,
- štete na bentonitu, suspenziji ili bilo kakvom sredstvu ili supstanci koja se koristi kao potpora prilikom iskopavanja ili kao agens za stabilizovanje tla.

U slučaju štete, za koju postoji obaveza naknade, maksimalan iznos za isplatu će biti ograničen na troškove nastale zbog vraćanja osigurane imovine u standard ili stanje koje je tehnički jednako onome koje je postojalo neposredno prije nastupanja štete, ali koji ne prelazi procenat, kako je navedeno dolje, prvobitnih prosječnih troškova izgradnje po metru u neposredno oštećenom dijelu.

Maksimalni procenat koji se plaća: ___%

Prilog 102 – Posebni uslovi za podzemne kablove, cijevi i druge instalacije

Ugovoreno je i podrazumijeva se da je, nasuprot rokovima, isključenjima, odredbama i uslovima sadržanim u polisi ili prilozima uz polisu, osiguravač u obavezi da osiguraniku isplati naknadu iz osiguranja za štete na postojećim podzemnim kablovima, cijevima i drugim podzemnim instalacijama samo ako je osiguranik, prije početka radova, ispitao sa nadležnim vlastima tačan položaj ovih kablova, cijevi i drugih podzemnih instalacija i ako je preduzeo sve neophodne mjere za izbjegavanje štete na istim.

Zahtjevi u pogledu šteta na takvim podzemnim instalacijama koje imaju isti položaj kao što je prikazano na mapama podzemnih instalacija (crtežima koji pokazuju položaj podzemnih instalacija) su plativi po odbitku franšize u visini od _____ od iznosa štete ili franšize dolje navedene pod a), koja god je veća.

Zahtjevi u pogledu šteta na takvim podzemnim instalacijama koje su netačno prikazane na mapama podzemnih instalacija su plativi po odbitku franšize dolje navedene pod b).

Naknada iz osiguranja je u svakom slučaju ograničena na troškove popravljanja takvih kablova, cijevi ili drugih podzemnih instalacija, a bilo kakva posljedična šteta i kazne isključeni su iz ovog pokrića.

Franšize: **a) _____ od iznosa štete, minimum _____ po jednom slučaju**

Prilog 104 – Posebni uslovi za izgradnju brana i rezervoara za vodu

Ugovoreno je i podrazumijeva se da, nasuprot rokovima, isključenjima, odredbama i uslovima sadržanim u polisi ili prilozima uz polisu, osiguravač nije u obavezi da osiguraniku isplati naknadu iz osiguranja u pogledu:

- zalivanja područja sa mekim stijenama cementom i/ili drugih dodatnih sigurnosnih mjera, čak i ako potreba za njima nastane tek tokom izgradnje,
- troškova nastalih za odvodnjavanje, čak i ako su prvobitno očekivane količine vode znatno premašene,
- šteta zbog kvara na sistemu za odvodnjavanje ako se takav kvar mogao izbjeći dovoljnim rezervnim uređajima obezbijeđenim na licu mjesta,
- troškova nastalih za dodatno zaptivanje ili zaštitu od vode i dodatna postrojenja za izbacivanje tekućih ili podzemnih voda,
- šteta usljed slijeganja tla ukoliko su prouzrokovane nedovoljnim sabijanjem,
- pukotina i curenja.

3/12/18

Prilog 109 – Pokriće za građevinski materijal

Ugovoreno je i podrazumijeva se da će, nasuprot rokovima, isključenjima, odredbama i uslovima sadržanim u polisi ili prilozima uz polisu, osiguravač biti u obavezi da isplati osiguraniku naknadu iz osiguranja samo za štetu ili odgovornost neposredno ili posredno prouzrokovanu na građevinskom materijalu poplavom ili izlivanjem ako takav građevinski materijal ne prelazi trodnevne potrebe, a višak materijala se čuva na mjestu koje nije bilo plavljeno u periodu od 20 godina.

GEORGIOS KARKANIAS
PRESIDENT

3/12/18

Prilog 110 – Posebni uslovi u pogledu bezbjednosnih mjera koje se odnose na padavine, poplave i izlivanje

Ugovoreno je i podrazumijeva se da će, nasuprot rokovima, isključenjima, odredbama i uslovima sadržanim u polisi ili prilozima uz polisu, osiguravač biti u obavezi da isplati osiguraniku naknadu iz osiguranja samo za štetu ili odgovornost neposredno ili posredno prouzrokovanu padavinama, poplavom ili izlivanjem samo ako su preduzete odgovarajuće sigurnosne mjere u projektovanju i izvođenju datog projekta.

Odgovarajuće sigurnosne mjere, za svrhu ovog priloga, značiće da je za padavine, poplave i izlivanje, u svakom trenutku tokom perioda osiguranja, uračunata mogućnost njihovog pojavljivanja obzirom na prethodni period od 20 godina za osiguranu lokaciju na osnovu statističkih podataka pripremljenih od strane meteoroloških službi.

Šteta ili odgovornost koji su nastali kao posljedica neblagovremenog uklanjanja prepreka (npr. pijesak, drveće) od strane osiguranika iz vodenih tokova u okviru mjesta izgradnje, bilo da u njima ima vode ili ne, radi održavanja slobodnog protoka vode, nijesu pokrivene.

3/12/18

Prilog 112 – Posebni uslovi u pogledu protivpožarnih uređaja i protivpožarnih mjera na gradilištima

Ugovoreno je i podrazumijeva se da će, nasuprot rokovima, isključenjima, odredbama i uslovima sadržanim u polisi ili prilozima uz polisu, osiguravač biti u obavezi da isplati osiguraniku naknadu iz osiguranja samo za štetu ili odgovornost neposredno ili posredno prouzrokovanu požarom ili eksplozijom, uvijek pod uslovom

1. Da je, obzirom na tok radova, u svakom trenutku dostupna i u funkciji odgovarajuća protivpožarna oprema i dovoljno sredstava za gašenje požara.
   Da su instalirani ispravni hidranti do nivoa ispod najvišeg trenutnog nivoa radova i da su zaptiveni privremenim poklopcima.
2. Da se kasete sa crijevima i prenosivim aparatima za gašenje požara provjeravaju u redovnim intervalima, a najmanje dvaput nedjeljno.
3. Da su prostorije sa protivpožarnim uređajima prema zahtjevima lokalnih pravila instalirane što prije nakon uklanjanja oplate.
   Da su otvori za šahtove liftova, kanali za rad i druge šupljine privremeno zatvoreni što prije, ali ne kasnije od početka opremanja.
4. Da se otpadni materijal uklanja redovno. Da su svi spratovi koji se opremaju očišćeni od zapaljivog materijala na kraju svakog radnog dana.
5. Da se sistem „dozvole za rad" primenjuje na sve izvođače koji su angažovani u „radovima na toplo" bilo koje vrste kao što su, (ali bez ograničenja na)
   - brušenje, sječenje i zavarivanje
   - korišćenje let-lampi i otvorenog plamena
   - primjena toplog bitumena,

   i bilo kojih drugih radova pri kojima se stvara toplota.
   „Rad na toplo" vrši se samo u prisustvu najmanje jednog radnika opremljenog aparatom za gašenje požara i obučenim za gašenje požara.
   Mjesto na kome se obavljaju radovi mora se pregledati jedan sat nakon završetka radova.
6. Da materijal za izgradnju ili montažu bude uskladišten po skladišnim jedinicama koje ne prelaze dolje navedenu vrijednost po jednoj jedinici. Pojedinačne skladišne jedinice moraju biti ili najmanje 50 metara udaljene jedna od druge ili odvojene protivpožarnim zidovima.
   Da svi zapaljivi materijali, a naročito sve zapaljive tečnosti i gasovi budu uskladišteni na dovoljno velikoj udaljenosti od imovine koja se gradi ili montira i od bilo kog rada na toplo.
7. Da je određen koordinator mjera bezbjednosti na gradilištu.
   Da je instaliran ispravan protipožarni sistem za uzbunjivanje i kad god je to moguće neposredna veza sa najbližom vatrogasnom jedinicom.
   Da se plan za protivpožarnu zaštitu i plan za postupanje prilikom požara primjenjuje i ažurira redovno.
   Da su zaposleni Osiguranika obučeni za protivpožarnu zaštitu i da se protivpožarne vježbe praktikuju nedeljno.
   Najbliža vatrogasna jedinica je upoznata sa gradilištem i obezijedjen je direktan dvadesetčetvoročasovni pristup
8. Gradilište je ograđeno i pristup je kontrolisan.

3/12/18

Prilog 118 – Bušenje za izvorišta vode

Ugovoreno je i podrazumijeva se da će, nasuprot rokovima, isključenjima, odredbama i uslovima sadržanim u polisi ili prilozima uz polisu, pokriće za radove na bušenju izvorišta vode biti ograničeno štete prouzrokovane ili proistekle iz sljedećih rizika:

- zemljotresa, vulkanskih erupcija, cunamija,
- olujnih vjetrova, ciklona, poplava, izlivanja, klizišta,
- dizanja u vazduh i/ili stvaranjem kratera,
- požara/eksplozije,
- arterskih vodenih tokova,
- štete od mulja, koje se ne mogu oktloniti poznatim postupcima,
- obrušavanjem rupe uključujući rušenje podzide usl,ed nenormalnog pritiska ili bubrenjem škriljaca, koje se ne može spriječiti uobičajenim postupcima.

Naknada će biti obračunata na osnovu troškova (uključujući materijal) potrošenih za bušenje izvorišta do samog trenutka kada prva od gore navedenih opasnosti postane vidna, a izvorište mora da bude napušteno zbog neke osigurane opasnosti, s tim što će osiguranik snositi franšizu od 10% od iznosa štete, u minimalnom iznosu koji je dolje naveden po jednom slučaju.

Posebna isključenja

Osiguravač nije u obavezi da plati naknadu iz osiguranja za:

- štetu na bušotini i opremi za bušenje (za koju izvođač radova koji vrši bušenje može da zaključi posebno osiguranje),
- troškove završnih operacija svih vrsta,
- troškove vraćanja bunara u prvobitno stanje uključujući sve stimulativne radove (nagrizanje, lomljenje itd.)

Franšiza:

GEOBUDE KARKANTAS PRESIDENT

3192/18

Prilog 119 – Postojeća imovina ili imovina koja pripada ili je u državini, pod nadzorom ili kontrolom osiguranika

Ugovoreno je i podrazumijeva se da će, nasuprot rokovima, isključenjima, odredbama i uslovima sadržanim u polisi ili prilozima uz polisu i pod uslovom da je osiguranik platio ugovorenu dodatnu premiju, Odjeljak I ovih posebnih uslova biti proširen tako da pokriva štete nastale na postojećoj imovini ili imovini koja pripada ili je u državini, pod nadzorom ili kontrolom osiguranika koje su prouzrokovane ili nastale izgradnjom ili montažom na predmetima osiguranim po Odjeljku 1.

Osigurana imovina:

Suma osiguranja:

Osiguravač je u obavezi da osiguraniku plati naknadu iz osiguranja za štete na osiguranoj imovini pod uslovom da je prije početka izgradnje ona bila u dobrom stanju i da su preduzete sve potrebne sigurnosne mjere.

U pogledu šteta prouzrokovanih vibracijama ili uklanjanjem ili slabljenjem potpora, oslonaca ili nosećih konstrukcija, osiguravač je u obavezi da osiguraniku plati samo naknadu za štete koje su rezultat potpunog ili delimičnog rušenja osigurane imovine, a ne za površinske štete koje ne oštećuju stabilnost osigurane imovine niti ugrožavaju njene korisnike.

Osiguravač nije u obavezi da osiguraniku plati naknadu za

- štete koje su predvidive obzirom na vrstu građevinskih radova i način izvođenja;
- Troškove sprečavanja šteta ili smanjivanje rizika nastupanja šteta koje su postale neophodne tokom perioda osiguranja.

Franšiza:

Prilog 120 – Vibracije, uklanjanje ili slabljenje potpora, oslonaca ili nosećih konstrukcija

Ugovoreno je i podrazumijeva se da će, nasuprot rokovima, isključenjima, odredbama i uslovima sadržanim u polisi ili prilozima uz polisu i pod uslovom da je osiguranik platio ugovorenu dodatnu premiju, Odjeljak 2 ovih posebnih uslova biti proširen tako da pokriva odgovornost usljed šteta prouzrokovanih vibracijama, uklanjanjem ili slabljenjem potpora, oslonaca ili nosećih konstrukcija

Uvijek pod uslovom da je:

osiguravač u obavezi da osiguraniku plati naknadu iz osiguranja za štetu na bilo kakvoj imovini, zemljištu ili građevini samo ako takva šteta za posljedicu ima potpuno ili djelimično rušenje,

- osiguravač je u obavezi da osiguraniku plati naknadu iz osiguranja za štetu na bilo kakvoj imovini, zemljištu ili građevini samo ako je prije početka izgradnje bila u dobrom stanju i ako su preduzete neophodne mjere za sprečavanje šteta,

- ukoliko je osiguranik na odgovarajući zahtjev, prije početka izgradnje o svom trošku, pripremio izveštaj o stanju imovine, zemljišta ili građevine koja je ugrožena.

Osiguravač nije u obavezi da osiguraniku isplati naknadu iz osiguranja u pogledu odgovornosti za:

- štetu koja se mogla predvidjeti obzirom na vrstu građevinskih radova ili način izvođenja,
- površinske štete koja ne ugrožavaju stabilnost imovine, zemljišta ili građevina, niti ugrožavaju njihove korisnike,
- troškove sprečavanja šteta ili smanjivanje rizika nastupanja šteta koje su postale neophodne tokom perioda osiguranja.

Prilog 121 – Posebni uslovi za pobijanje šipova i radove na potpornim zidovima

Ugovoreno je i podrazumijeva se da, nasuprot rokovima, isključenjima, odredbama i uslovima sadržanim u polisi ili prilozima uz polisu, osiguravač nije u obavezi da osiguraniku isplati naknadu iz osiguranja za troškove nastale zbog

1. zamjene ili popravljanja šipova ili elemenata potpornih zidova
   b) koji su stavljeni na pogrešno mjesto, pogrešno postavljeni ili zaglavljeni tokom izgradnje,
   c) koji su izgubljeni, napušteni ili oštećeni tokom pobijanja ili vađenja, ili
   d) koji su blokirani zaglavljenom ili oštećenom opremom za pobijanje ili cijevnim oblogama;
2. popravljanja nepovezanih ili neprikačenih šipova;
3. popravljanja curenja ili prodora materijala bilo koje vrste;
4. ispunjavanja šupljina ili zbog zamjene izgubljenog bentonita;
5. toga što neki šipovi ili elementi fundiranja nijesu prošli test opterećenja ili na drugi način nijesu dostigli svoj projektovanu nosivost;
6. vraćanja profila i dimenzija u prvobitno stanje.

Ovaj Prilog se ne primjenjuje za štete prouzrokovane prirodnim opasnostima. Teret dokazivanja da je takva šteta pokrivena je na osiguraniku.

PRESIDENT

3/12/18

Prilog 200- Rat i terorizam

Bez obzira na bilo koju odredbu koja je u suprotnosti u okviru ovog osiguranja ili bilo koje klauzule uz isto, dogovoreno je da ovo osiguranje isključuje gubitak, štetu, trošak ili rashod bilo koje prirode koji je direktno ili indirektno izazvan bilo kojim navedenim događajem ili koji nastane kao posljedica istog ili u vezi s istim bez obzira na drugi uzrok ili događaj koji doprinosi datom gubitku istovremeno ili bilo kojim drugim redosljedom:

1. rat, invazija, postupci stranih neprijatelja, neprijateljstva ili ratne operacije (bilo da je rat objavljen ili ne), građanski rat, pobuna, revolucija, ustanak, građanski nemiri koji dobijaju razmjer ustanka ili vode ka ustanku, vojnoj i drugoj uzurpaciji vlasti; ili

2. bilo koji čin terorizma.

U smislu ove klauzule, čin terorizma označava čin koji obuhvata, uključujući ali ne ograničavajući se na, korišćenje sile ili nasilja i/ili prijetnju istim, bilo kojem licu ili grupi(ama) lica, bilo da se postupa samostalno ili u ime bilo koje(ih) organizacije(a) ili vlade(a) ili u vezi s istima, koji je izvršen iz političkih, vjerskih, ideoloških ili sličnih razloga uključujući namjeru da se utiče na bilo koju vladu i/ili da se zastraši javnost ili dio javnosti.

Ova klauzula takođe isključuje gubitak, štetu, trošak ili rashod bilo koje prirode koji je direktno ili indirektno izazvan bilo kojim činom, ili koji je posljedica istog ili u vezi s istim, preduzetim radi kontrolisanja, prevencije, sprečavanja stavki navedenih pod (1) i/ili (2) iznad ili koji se na bilo koji način odnosi na iste.
Ako Osiguravač bude tvrdio da iz razloga ovog isključenja, bilo koji gubitak, šteta, trošak ili rashod nije pokriven ovim osiguranjem, teret dokazivanja suprotnog pada na Osiguranika.

U slučaju da bude utvrđeno da je bilo koji dio ovog odobrenja nevažeći ili neprimjenjiv, ostatak ostaje na punoj snazi i dejstvu.

Ratna municija

Ovim se napominje i potvrđuje da Opšta isključenja navedena iznad pod a) ne važe za gubitak ili štetu na Osiguranoj imovini koja proistekne ili bude prouzrokovana detonacijom ratne municije ili njenih dijelova ili u blizini Projektnog gradilišta pod uslovom da prisustvo takve municije nije posljedica ratnog stanja koje je u toku u vrijeme gubitka ili štete.

Prilog 201 - Isključenje rizika radioaktivne kontaminacije, hemijskog, biološkog, biohemijskog i elektromagnetnog oružja

Ova klauzula je od najveće važnosti i ima prvenstvo nad svim navedenim u ovoj polisi što nije u skladu s njom.

1. Ovo osiguranje ni u kojem slučaju ne pokriva gubitak, oštećenje, odgovornost ili troškove koji su direktno ili indirektne prouzrokovani, ili čijem je nastanku doprinijelo, ili koji proizlaze iz:

1.1 jonizirajućeg radioaktivnog zračenja ili radioaktivne kontaminacije nuklearnim gorivom ili nuklearnim otpadom ili sagorijevanjem nuklearnog goriva;

1.2 radioaktivnim, toksičnim, eksplozivnim ili drugim opasnim ili kontaminirajućim svojstvima nuklearnih postrojenja, reaktora ili drugih nuklearnih sklopova ili njihovih nuklearnih sastavnih dijelova;

1.3 oružja ili uređaja za koje se koristi atomska ili nuklearna fisija i/ili fuzija ili neka druga slična reakcija ili radioaktivna sila ili supstanca;

1.4 radioaktivnih, toksičnih, eksplozivnih ili drugih opasnih ili kontaminirajućih svojstava bilo koje radioaktivne supstance. Isključenje iz ove tačke ne odnosi se na radioaktivne izotope, osim nuklearnog goriva, ako se ti izotopi pripremaju, prevoze, skladište ili koriste u komercijalne, poljoprivredne, medicinske, naučne ili druge slične miroljubive svrhe;

1.5 hemijskog, biološkog, biohemijskog ili elektromagnetskog oružja.

Prilog 202-Elektronski podaci

1. Isključenje elektronskih podataka

Bez obzira na bilo koju suprotnu odredbu u okviru Polise ili bilo kojeg odobrenja uz nju, dogovoreno je i potvrđuje se sljedeće:

a) Ovom Polisom se ne osigurava gubitak, šteta, uništenje, deformacija, brisanje, kvarenje ili izmjena Elektronskih podataka zbog bilo kojeg uzroka (uključujući ali ne ograničavajući se na Kompjuterski virus) ili gubitak korišćenja, smanjenje funkcionalnosti, troškovi, rashodi bilo koje vrste koji iz toga proizađu, bez obzira na sve druge uzroke ili događaje koji doprinose datom gubitku istovremeno ili bilo kojim drugim redosljedom.
Elektronski podaci označavaju činjenice, koncepte i informacije koje su konvertovane u oblik koji se može koristiti za komunikaciju, tumačenje ili obradu elektronskom i opremom za elektromehaničku obradu podataka ili elektronski kontrolisanom opremom i obuhvata programe, softver i druga kodirana uputstva za obradu i rukovanje podacima ili upravljanje i rukovanje takvom opremom.
Kompjuterski virus znači skup koruptivnih, štetnih ili drugih neovlašćenih instrukcija ili kod koji obuhvata skup maliciozno unesenih neovlašćenih instrukcija ili kod, programski ili drugi, koji se širi kroz kompjuterski sistem ili mrežu bilo koje prirode. Kompjuterski virus obuhvata ali nije ograničen na „trojanske konje", „crve", i „vremenske ili logičke bombe".

b) Međutim, u slučaju da neka od opasnosti navedenih ispod nastane kao posljedica bilo koje od stavki navedenih u stavu (a) iznad, ova će Polisa, prema njenim uslovima i isključenjima, pokrivati fizičko oštećenje nastalo tokom perioda važenja Polise na imovini koja je osigurana ovom Polisom a koje je direktno izazvano tako navedenom opasnošću.

Navedene opasnosti: Požar, Eksplozija

2. Vrednovanje medija za obradu elektronskih podataka

Bez obzira na bilo koju suprotnu odredbu u okviru Polise ili bilo koje klauzule primijenjene uz nju, dogovoreno je i potvrđuje se sljedeće:

Ukoliko medij za obradu elektronskih podataka koji je osiguran ovom Polisom pretrpi fizički gubitak ili oštećenje osigurano ovom Polisom, onda će osnova za vrednovanje biti cijena popravke, zamjene ili vraćanja datog medija u stanje koje je postojalo neposredno prije takvog gubitka ili oštećenja, uključujući trošak reprodukovanja svih Elektronskih podataka koji su u njemu sadržani, pod uslovom da se dato sredstvo popravi, zamijeni ili vrati u dato stanje. Takvi troškovi reprodukovanja obuhvataju sve razumne i neophodne iznose, koji ne smiju prelaziti _____% osiguranog iznosa u pogledu sekcije 1 kako je navedeno u detaljima vezano za rizike uz originalnu polisu, a koje napravi Osiguranik pri ponovnoj izradi, prikupljanju i sastavljanju takvih Elektronskih podataka. Ako mediji ne budu popravljeni, zamjenjeni ili vraćeni u dato stanje osnova za vrednovanje je trošak praznog medija. Međutim, ovom Polisom se ne osigurava bilo koji iznos koji pripada vrijednosti takvih Elektronskih podataka za Osiguranika ili bilo koju drugu stranu, čak i ako se takvi Elektronski podaci ne mogu ponovo izraditi, prikupiti ili sastaviti.

GEORGIOS KARKANIAS

3/12/18

Prilog 203 - Isključenje političkih rizika, finansijskih garancija i kreditnih rizika

Ovo osiguranje isključuje svaku štetu ili odgovornost koja proističe iz sljedećeg:

1. Raskid ugovora zbog nepredviđenih okolnosti, uključujući ali bez ograničenja na sve oblike neizvršenja ugovornih obaveza, embarga na uvoz i/ili izvoz, nepotvrđivanja ugovora, transfera u različitoj valuti, izdavanja obveznica i garancija i obeštećenja u slučaju više sile.
2. Neisporučivanje ili kašnjenje u isporuci ili snabdijevanju bilo kojom robom osim kao direktna posljedica fizičkog oštećenja.
3. Bilo koji oblik finansijske garancije, obeštećenja za jemca za kredit.

GEORGIOS KARKANIAS
PRESIDENT

3/12/18

Prilog 204 - Industrije, curenje, zagađenje i kontaminacija

Ovo Osiguranje ne pokriva bilo koju odgovornost za:

1) Ličnu povredu ili Tjelesnu povredu ili gubitak, oštećenje, ili gubitak usled korišćenja imovine direktno ili indirektno izazvan curenjem, zagađenjem ili kontaminacijom, pod uslovom da ovaj stav (1) ne važi za odgovornost za Ličnu povredu ili Tjelesnu povredu ili gubitak ili fizičko oštećenje ili uništenje materijalne imovine, ili gubitak korišćenja takve imovine koja je oštećena ili uništena, pri čemu je takvo curenje, zagađenje ili kontaminacija izazvana iznenadnim, nenamjernim i neočekivanim događajem tokom perioda važenja ovog Osiguranja.

2) Trošak uklanjanja, poništenja ili čišćenja supstanci koje su iscurile, zagadile ili kontaminirale osim ukoliko je curenje, zagađenje ili kontaminacija izazvana iznenadnim, nenamjernim i neočekivanim događajem tokom perioda važenja ovog Osiguranja.

3) Novčane kazne, penali, kaznene ili štete kao primjeri.

Ova klauzula ne proširuje ovo Osiguranje tako da pokrije bilo koju odgovornost koja bi bila pokrivena ovim Osiguranjem da ova klauzula nije priključena.

GEORGIOS KARKANIAS
PRESIDENT

3/12/18

Prilog 205 -Isključenje rizika od azbesta

Ova Polisa je izmijenjena i dopunjena tako da ne važi za bilo koji zahtjev ili zahtjeve za odgovornost koja je posljedica proizvodnje ili distribucije ili korišćenja, ili bilo kojeg od navedenog, azbesta ili proizvoda koji sadrže azbestna vlakna i odgovornost koja je posljedica azbestoze ili bilo koje povezane bolesti i odgovornost nastalu zbog inhalacije azbestnih vlakana.

GEORGIOS KARKANIAS
PRESIDENT

3/12/18

Prilog 206 - Isključenje odgovornosti za rizik od ograničenog neispravnog stanja (DE 3)

Ova Polisa isključuje gubitak ili oštećenje i troškove koji su neophodni za zamjenu, popravku ili ispravku

(i) Osigurane imovine koja je u neispravnom stanju zbog nedostatka u specifikacijama projektnog plana ili nedostataka u izradi takve Osigurane imovine ili bilo kojeg njenog dijela

(ii) Osigurane imovine koja je izgubljena ili oštećena kako bi se omogućila popravka ili ispravka Osigurane imovine koja je isključena pod (i) iznad

Isključenje pod (i) iznad ne važi za drugu Osiguranu imovinu koja nije u neispravnom stanju ali je oštećena kao posljedica istog.

U svrhu Polise a ne samo ovog Isključenja neće se smatrati da je Osigurana imovina izgubljena ili oštećena samo na osnovu postojanja bilo kojeg nedostatka u specifikaciji za projektni plan ili izradi Osigurane imovine ili bilo kojem njenom dijelu.

GEORGIOS KARKANIAS
PRESIDENT

3/12/18

Prilog 207 - Isključenje rizika od unapređenja projekta (DE 5)

Ova polisa isključuje:

(i) Trošak koji je neophodan za zamjenu, popravku ili ispravku bilo koje Osigurane imovine koja je neispravna u specifikaciji projektnog plana ili izradi;

(ii) Gubitak ili oštećenje Osigurane imovine koje je izazvano radi omogućavanja zamjene, popravke ili ispravke takve neispravne Osigurane imovine.

Ali, ukoliko oštećenje Osigurane imovine (osim oštećenja definisanog pod (ii) iznad) nastane kao posljedica takvog nedostatka, ovo Isključenje se ograničava na troškove dodatnog rada koji proisteknu i dodatne troškove unapređenja originalne specifikacije projektnog plana ili izrade.

U svrhu Polise a ne samo ovog Isključenja neće se smatrati da je Osigurana imovina izgubljena ili oštećena samo na osnovu postojanja bilo kojeg nedostatka u specifikaciji projektnog plana ili izradi Osigurane imovine ili bilo kojeg njenog dijela.

GEORGIOS KARKANIAS
PRESIDENT

3/12/18

Prilog 208 – Rizici u vezi sa vodom

Ova Klauzula, ukoliko je ugovorena čini sastavni dio polise i važi bez obzira na uslove, odredbe i isključenja sadržana u polisi osiguranja ili odobrena u njoj.

1. Isključenje

1.1 Osiguravač neće nadoknaditi štetu Osiguraniku nastalu zbog:

1.1.1 gubitka ili štete na vezovima, pristaništima, molovima i sličnom izazvane njihovim slijeganjem ili potonućem,

1.1.2 uobičajenim dejstvom rijeke/mora,

1.1.3 gubitkom ili štetom na više od 200 m nezavršenog ili nezaštićenog valobrana, keja ili drugog vodenog objekta,

1.1.4 gubitka, štete ili odgovornosti zbog erozije tla,

1.1.5 iskopavanja ili ponovnog iskopavanja,

1.1.6 izgubljenog ili oštećenog materijala za popunjavanje,

1.1.7 zamjene ili ispravke stubova ili elemenata potpornih zidova,

-koji su nestali ili nisu u liniji ili su zaglavljeni tokom izgradnje,

-koji su izgubljeni ili napušteni ili oštećeni tokom vožnje ili izvlačenja, ili

-koji su prepriječeni zaglavljenim ili oštećenom opremom za stubove ili kućištem,

1.1.8 popravljanja odvojenih ili otkačenih talpi,

1.1.9 ispravke svakog curenja ili prodiranja materijala bilo koje vrste,

1.1.10 kao posljedica toga što stubovi elemenata temelja nisu prošli test nosivosti ili na drugi način nisu postigli svoj projektovani kapacitet nosivosti,

1.1.11 za ponovno uspostavljanje profila ili dimenzija,

1.1.12 bilo koje plutajuće opreme kao što su kesoni, barke i slično i odgovornost koja proističe iz istog,

1.1.13 svake mobilizacije/demobilizacije i/ili drugih troškova koji proizilaze iz pripravnosti/čekanja građevinske opreme na moru zbog vremenskih uslova,

1.1.14 gubitka ili oštećenja zbog vuče žica, sidra, lanaca i bova,

1.1.15 gubitka ili oštećenja zbog uticaja utovara,

1.1.16 pomorske odgovornosti,

2. Definicija

2.1 uobičajena aktivnost mora označava stanje mora, koje se manifestuje do broja 8 na Boforovoj skali, ili stanje plime i oseke, struje i talasa mora, za koje se mora statistički očekivati da će se desiti tokom perioda od 20 godina, koje god je nepovoljnije.

GEORGHOS KARKANIAS
PRESIDENT

31/12/18

3. Garancije

3.1 Dogovoreno je i potvrđeno da će bez obzira na uslove, isključenja ili odredbe sadržane u polisi, Osiguranik:

3.1.1 primati dnevne vremenske izvještaje od lokalne meteorološke stanice tokom perioda važenja osiguranja i imati stalni kontakt s lokalnom meteorološkom stanicom tokom upozorenja datog 12 sati unaprijed za nastupajuću oluju.

3.1.2 uspostaviti navigaciju za javni saobraćaj do gradilišta od najmanje 200m.

GEORGIOS KARKANIAS
PRESIDENT

3/12/18

Prilog 209 - 72 časa

U svrhu primjene franšiza dogovoreno je da svaki gubitak ili šteta na Osiguranoj imovini opisana u detaljima vezano za rizik koja nastane tokom bilo kojeg perioda od sedamdeset dva uzastopna sata a koja je izazvana olujom, nepogodom, poplavom ili zemljotresom smatraće se da je jedan događaj i prema tome čini jednu štetu. U svrhu gorenavedenog, početak svakog takvog perioda od sedamdeset dva sata utvrđuje se prema nahođenju Osiguranika, pri čemu se podrazumijeva, međutim, da ne može postojati preklapanje bilo koja takva dva ili više perioda od sedamdeset dva sata u slučaju štete koja nastane tokom produženog perioda vremena.

U slučaju gubitka ili štete na Osiguranoj imovini gdje važi više od jednog iznosa prikazanog iznad, važiće samo najveći iznos.

GEORGIOS KARKANIAS
PRESIDENT

3/12/18

Prilog 210 – Podjela 50/50

Osiguranik mora pregledati pakovanja po dolasku na Gradilište ili bilo koji prostor za skladištenje izvan gradilišta a oštećena pakovanja se moraju otvoriti odmah. Daje se dozvola da se odloži otpakivanje oštećene ambalaže na 60 dana za ključne proizvode i 120 dana za sve druge proizvode od datuma dospijeća na Gradilište. Oštećenja koja budu otkrivena tokom perioda odloženog otpakivanja isključena su iz ove polise.

U slučaju da se gubitak ili oštećenje na osiguranoj imovini otkrije nakon gorenavedenog perioda odloženog otpakivanja a ne bude moguće da se utvrdi kada ili gdje je nastao gubitak ili šteta, dogovoreno je da se svaki zahtjev za takav gubitak ili štetu dijeli po principu 50/50 između Osiguravača po ovoj polisi i polise za osiguranje robe u transportu, ako su različite.

GEORGIOS KARKANTAS
PRESIDENT

3/12/18

Prilog 211 – Automatsko ponovno pokriće do sume osiguranja

U odsustvu pismenog obavještenja datog od strane Osiguravača kojim se izjavljuje suprotno, odgovornost Osiguravača neće ostati umanjena za iznos bilo koje štete koja se desi, a Osiguranik se obavezuje da će platiti odgovarajuću dodatnu premiju za takvo automatsko ponovno pokriće do sume osiguranja, pri čemu premija neće prelaziti proporcionalni iznos plaćene premije iz prethodnog perioda.

GEORGIOS KARYAMIAS

3/12/18

Prilog 212 - Planovi i dokumenta

U slučaju slučajnog fizičkog gubitka ili slučajne fizičke štete koja se nadoknađuje prema ovoj polisi na planovima, skicama, spisima, dokumentima, rukopisima, ili evidenciji u kompjuterskom sistemu koji čine dio Osigurane imovine, dogovoreno je da će Nadoknada iz ove Polise obuhvatiti i troškove rada i kompjuterskog vremena utrošenog za reprodukovanje takve imovine, uključujući sve troškove koji nastanu pri izradi informacija koje su u njima sadržane, ali

a) ne obuhvata bilo koji gubitak pretrpljen od strane Osiguranika zbog izobličenja ili nedostupnosti takve informacije;

b) limit pokrića:

GEORGIOS KARKANTAS
PRESIDENT

3/12/18

Prilog 213 – Profesionalne naknade

Osiguravač će isplatiti nadoknadu Osiguraniku u pogledu naknada za arhitekte, geodete, konsultante, inženjere i druge naknade koje su dodatne uz one koje su sadržane u procijenjenim projektnim troškovima koji se mogu osigurati a koji su neophodni i razumno nastali pri popravci ili ponovnom uspostavljanju pređašnjeg stanja nakon nastanka štete na Osiguranom projektu zbog bilo kojeg uzroka pokrivenog prema ovoj Polisi. Pokriće je ograničeno na iznos koji je naveden u polisi.

Ovo dodatno pokriće ne obuhvata naknade i troškove koji su povezani s javnim-ovlašćenim procjeniteljima. Na dodatno pokriće primjenjuje se franšiza koja je ugovorena.

Limit pokrića:

GEORGIOS KARKANIAS
PRESIDENT

3/12/18

Prilog 214 - Državni organi

Osiguranje predviđeno ovom polisom na osiguranoj imovini obuhvata i one dodatne troškove ponovnog vraćanja u pređašnje stanje izgubljene, uništene ili oštećene imovine koja je ovim osigurana a koji mogu nastati jedino zbog neophodnog poštovanja građevinskih i drugih propisa iz državne nadležnosti ili utvrđenog u skladu s bilo kojim državnim organom, ali uvjek pod uslovom da:

(a) iznos koji se može dobiti u okviru ove klauzule ne isključuje:

(i) troškove nastale pri poštovanju bilo kojeg od gorenavedenih propisa ili podzakonskih akata

(a) u pogledu štete koja nastane prije odobrenja primjene klauzule,
(b) u pogledu štete koja nije osigurana u okviru ove klauzule,
(c) u okviru kojeg je Osiguraniku uručeno obavještenje prije nastanka štete,
(d) u pogledu neoštećene imovine ili neoštećenih dijelova imovine osim temelja (osim ukoliko je posebno isključeno) onog dijela imovine koja je uništena ili oštećena;

(ii) dodatne troškove koji bi bili potrebni radi dovođenja u pređašnje stanje imovine koja je izgubljena, uništena ili oštećena da nije došlo do neophodnog poštovanja gorenavedenih propisa ili zakonskih akata,

(iii) iznos bilo koje naknade koja proistekne iz porasta vrijednosti kapitala koja može biti plativa u pogledu imovine ili od strane njenog vlasnika zbog poštovanja bilo kojeg od navedenih propisa ili zakonskih akata,

(b) rad na vraćanju u pređašnje stanje mora biti započet i izvršen bez nerazumnog odlaganja i u svakom slučaju mora biti završen u roku od dvanaest mjeseci nakon nastanka štete ili u onom daljem roku koji Osiguravač može dozvoliti (ako se to zahtijeva gorenavedenim propisima ili zakonskim aktima) pod uslovom da odgovornost Osiguravača prema ovom Proširenju time nije uvećana.

Limit pokrića:

GEORGIOS KARKANIAS
PRESIDENT

3/12/18

Prilog 215 -Privremene popravke

Nadoknada predviđena ovom klauzulom obuhvata troškove izvršenja privremenih popravki nakon gubitka ili štete koja je osigurana u okviru ove Polise kako bi se rad na Projektu mogao nastaviti pod uslovom da odgovornost Osiguravača prema ovom memorandumu ne prelazi 15% stvarnih troškova stalne popravke.

Limit pokrića:

GEORGIOS KARKANIAS
PRESIDENT

3/12/18

Prilog 216 – Uklanjanje ostataka

Pokriće po ovoj Polisi obuhvata one troškove koji su neophodni i koje razumno napravi Osiguranik u pogledu uklanjanja ostataka, rastavljanja, razbijanja, podupiranja ili ojačavanja bilo kojeg dijela imovine uništenog ili oštećenog kao posljedica osigurane nepredviđene situacije.

Međutim, pokriće koje je dato ovom klauzulom ne obuhvata troškove raščišćavanja, bilo na imovini Osiguranika ili u oblasti u okruženju imovine, u pogledu zaliha ili proizvoda.

Limit pokrića:

GEORGIOS KARKANIAS
PRESIDENT

3/12/18

Prilog 217 – Minimizacija štete

Osiguranje se proširuje tako da obuhvati odgovornost Osiguranika za troškove koji su nužno i razumno nastali kao posljedica hitne radnje preduzete tamo gdje je šteta neizbježna ili nakon štete radi sprečavanja ili minimiziranja dalje štete na Osiguranoj imovini, pod uslovom da odgovornost Osiguranika za takve troškove ne smije prelaziti iznos za koji bi Osiguravač bio u obavezi da plati da data radnja nije preduzeta i uvjek pod uslovom da ograničenje koje je prikazano u detaljima u vezi sa rizicima za svaki dio gdje je primjenjivo (ili onaj veći iznos koji može biti dogovoren u pismenom obliku od strane Osiguravača, prema njegovom apsolutnom nahođenju, prije nastanka troškova).

Limit pokrića:

GEORGIOS KARKANIAS
PRESIDENT

3/12/18

Prilog 218 - Ograničenje i isključivanje sankcija

Osiguravač ne obezbjedjuje pokriće i neće biti odgovoran da plati bilo kakvu štetu ili da obezbijedi bilo kakav nadoknadu ukoliko bi obezbjeđivanje takvog pokrića, plaćanje takve štete ili obezbjeđivanje takve nadoknade izložilo Osiguravača bilo kakvim sankcijama, zabranama ili restrikcijama po rezolucijama Ujedinjenih Nacija ili trgovinskim ili ekonomskim sankcijama, zakonima ili regulativama Evropske Unije, Ujedinjenog Kraljevstva Velike Britanije ili Sjedinjenih Američkih Država.

GEORGIOS KARKANIAS
PRESIDENT

3/12/18

Prilog 219 – Klauzula o eskalaciji

Budući da vrijednosti definisane u Prilogu predstavljaju Procijenjene Završne Vrijednosti radova i samim tim su privremene, potvrđuje se da će konačne završne vrijednosti radova predmetnog osiguranika biti Sume osiguranja.

Ukoliko Sume osiguranja, definisane na gore-opisan način:

(1) prevazilaze procijenjene završne vrijednosti navedene ovdje, osiguranik/osiguranici potvrđuju da će prijaviti Osiguravaču iznos takvog prekoračenja i da će platiti uvećanu premiju prema dogovorenim stopama, a Osiguravač potvrđuje da će prihvatiti njihov proporcionalni udio povećanja od maksimalno stotinu petnaest procenata (115%) procijenjenih završnih vrijednosti i da neće primijeniti prosjek ni na jednu štetu

ili

(2) su manje od procijenjenih završnih vrijednosti navedenih ovdje, Sume osiguranja proporcionalno će se smanjiti i Osiguravač potvrđuje da će vratiti premiju po dogovorenim stopama srazmjerno umanjenju osigurane sume.

Ovaj tekst Posebnih uslova za osiguranje objekata u izgradnji protiv svih rizika sa svim prilozima stupa na snagu dana 01.11.2013. godine, kada počinje i da se primjenjuje.

On the basis of the Law on Insurance (»Official Gazette of the Republic of Montenegro« no. **078/06** and **19/07**) the Articles of Incorporation of „UNIQA neživotno osiguranje" a.d. Podgorica, the following business policy act was passed at the meeting of the Management Board held on August 8th 2009:

UNIQA
osiguranje

CONDITIONS
FOR GENERAL LIABILITY INSURANCE

GEORGIUS KARKANIAS
PRESIDENT

3172/18

I INTRODUCTORY PROVISIONS

Meaning of certain expressions
Article 1

In these conditions, certain expressions shall have the following meaning:

Insurer – joint stock insurance company with which an insurance agreement shall be concluded, »Uniqa neživotno osiguranje« a.d.

Proposer – person that wants to conclude an insurance agreement with the Insurer and for that purpose submits a written Proposal to the Insurer;

Policy holder – person concluding an insurance agreement with the Insurer,

Insurant - person, whose liability is covered by insurance,

Third party – a person that is not the subject of the insurance agreement, i.e. a person whose liability is not covered by insurance. According to these conditions, a third party shall not be considered to be an employee, i.e. any natural person that is employed at the insurant, as well as any other natural person that on any grounds should perform an activity, render services or be trained for work at the insurant, as well as members of the Management Board, Supervisory Board and another management body and their spouses or close relatives. A third person shall not be considered to be either the spouse or other members of the household, as well as other persons that the insurant is obliged to support.

Proposal – written proposal of the Proposer made to the Insurer in order to conclude an insurance agreement.

Insurance policy – written document about the concluded insurance agreement.

Insurance premium – amount paid on the grounds of an insurance agreement.

Insurance sum – max. liability of the insurer per insured case,

Aggregate insurance sum (annual limit) – max. liability of the insurer for all insured cases during the insurance period,

Source of peril – activity (profession), objects (movable and immovable) or a certain feature from which liability as risk covered by this insurance may occur.

Financial loss (economic) – indirect loss that arose due to damage on persons and damage on objects, which represents a gain that the damaged might have reasonably expected according to the regular course or according to special circumstances and the realization of which was prevented with the activity of the person that caused the damage.

Implementation of conditions
Article 2

These conditions shall apply to General liability insurance except of those types of insurance that expressly exclude the implementation of these Conditions.

3/12/18

Provisions of the Terms and conditions for liability insurance, i.e. the provisions of the Law on obligatory relations shall apply to contractual relations that are not regulated with these Conditions.

II GENERAL PROVISIONS

Subject of insurance
Article 3

According to these conditions, the subject of insurance shall be the civil and legal liability of the insurant for losses due to death, bodily injury or impairment of health, as well as damages or destructions of objects of a third party, as well as financial losses.

The insurance shall also refer to liability for damage that occurred due to the:

1) Increase of peril and/or expansion of the insured source of peril that arose during the insurance period,

2) New source of peril that occurred at the insurant after concluding the insurance agreement,

3) Usage, i.e. possessing or rent of land, buildings and premises, that are exclusively used for the needs of an insured activity or profession,

4) Possession of garages that are on (in) insured real estates, if it does not concern a garage used for performing activity or a hotel garage,

5) Use of elevators intended for the transport of persons and cargo,

6) Storage of heating material and power for the exclusive use in performing the insured activity or profession,

7) Theft or disappearance of things of the insurant's employees for personal use, except of money, watches, cameras, valuables of all kinds, securities and documents of all kinds, on condition that the things are placed in closed premises or closed repositories,

8) Losses due to theft or disappearance of objects of third parties.

If it concerns objects mentioned in paragraph 2 items 3, 4, and 5 hereof, the insurance shall include also the liability of the insurant as the investor or contractor of construction works (new buildings, repair, remodelling, whitewashing, digging and similar) if the preliminary value of this works in each separate case should not exceed 10.000 euro.

Insured case
Article 4

An insured case shall be a loss that occurs towards third parties from any activity, possessing of property and objects or from a certain feature as sources of peril that are marked in the insurance policy, and on the basis of the civil and legal liability of the Insurant from which obligations of compensation for damage towards third parties arise or could arise for the Insurant.

GEORGIOS KARKANIAS
PRESIDENT

3/12/18

Temporal insurance validity
Article 5

The insurer shall be obliged only then when the insured case should occur during the insurance validity.

An insured case that occurred during the insurance validity and the cause of which was from the period which preceded the conclusion of the insurance agreement or from the period when the insurance was interrupted, shall be covered by insurance only then when till the insurance commencement or repeated insurance commencement the policy holder or insurant were not familiar and could not be familiar with the cause from which the insured case originated.

Concerning damages arising due to the impairment of health that arise gradually, in case of doubt, it shall be considered that the loss event occurred then when the impairment of health was determined for the first time with the finding of the physician.

The deadline for submitting a request for compensation for damage of a third damaged person, i.e. insurant, on the basis of rights from insurance by the policy concluded in line with the conditions, shall be the deadline determined with the Law on obligatory relations.

Insurance against new sources of peril
Article 6

If the insurance agreement was concluded upon payment of the insurance premium completely or in part, on the basis of the total income, the cover from insurance shall be expanded also to liability from new sources of peril that shall appear at the insurant after concluding the insurance agreement, if no special insurance for that new arising source of peril was concluded.

Immediately after the appearance of a new source of peril, the insurant shall be obliged to inform the insurer in writing about the appearance of a new source of peril.

The insurer shall be obliged to inform the insurant about the acceptance into cover of new sources of peril within 8 (eight) days and on the grounds of a written information from the previous paragraph. If the insurer should not respond within eight days, it shall be considered that the new source of peril was included in insurance, if the mentioned new source of peril should be in line with the valid insurance conditions and premium tariff.

The insurer shall keep the right of calculating additional premium for the cover of new sources of peril from the previous paragraphs hereof, as well as the right of not accepting new sources of peril and it shall inform the policy holder in written form about that within the deadline mentioned in the previous paragraph.

The insurance sum that was agreed on the policy for previously insured sources of peril shall be valid for new sources of peril, too. If the policy should contain various insurance sums for some sources of peril, the insurance sum agreed for a certain source of peril shall be valid.

The insurance of new sources of peril shall not refer to liability from:

- keeping or usage of tracks (railway, funicular railways, cable railways and similar), theatres, cinemas, circuses and stands as well as making of films;
- possession or usage of motor vehicles and other vehicles on motor power (tractors, cultivators, self-propelled work machines), vessels and aircrafts
- production, processing, storage, usage and trade with explosive material, or radioisotopes, if an approval of the competent body is required for this,
- Hunting as activity and hunting sport

GEORGIOS KARAMITAS
PRESIDENT

3/12/18

Inclusions in coverage
Article 7

Unless it is specifically stipulated and quoted in the insurance policy and additional premium is paid, insurance coverage is extended to:

1. other legal or natural person as an additional insurant on which these conditions provide protection from the damage claims of third parties
Insurance coverage that provides to an additional insurant is limited only on its liability arising from the activities of the insurant and/or liability arising from his activity in connection with the activities of the insurant.

2. cross over liability of several insurants who are covered by insurance and listed in the insurance policy, in accordance with point 1. of this paragraph, i.e. insurance coverage is extended to the mentioned insurants so that will be considered that all the insurants have concluded this insurance separately and they can ask each other for damage claims.

Total obligation of the Insurer for the agreed inclusion and expansion of coverage under the previous paragraphs does not exceed agreed insurance sum for the entire period.

Conclusion of insurance agreements
Article 8

The provisions of terms and conditions shall apply for the conclusion of a liability insurance agreement between the insurer and policy holder, except if not otherwise stipulated with these conditions.

The insurance agreement shall be concluded on the basis of a written proposal of the policy holder done to the insurer.

If the insurance agreement is concluded on the basis of the written proposal and the Insurer does not reject it within 8 (eight) days from the date when the proposal arrived to the Insurer, it shall be considered that the proposal is accepted and that the insurance agreement is concluded when the proposer/ policy holder has signed a proposal of insurance.

The signature of the proposer/policy holder on the insurance proposal shall be considered to be the signature on the policy.

Negotiating of deductible
Article 9

In all cases insurance may be agreed with and without participation in claim (deductible) in line with the tariff, except in cases in which obligatory participation in the damage is envisaged.

Insurance sum
Article 10

The insurance sum shall be agreed in a fixed pecuniary amount and it shall be the max. liability of the insurer per one insured case, disregarding of the number of damaged persons and persons the liability of which is covered by insurance, if not otherwise agreed.

The insurance sum from the previous paragraph shall refer also to cases of death, bodily injury or impairment of health, damages or destructions of objects of third parties.

The total liability of the insurer, for all insured cases that occurred in one insurance year shall not exceed amount of 5 (five) agreed insurance sums of paragraph 1 hereof.

The total annual insurance sum shall be reduced with the payment of each separate compensation. After exhaustion of the total annual insurance sum, the insurance shall cease to be valid.

Territorial validity of the insurance
Article 11

In respect of the territorial validity of the insurance, Terms and conditions for liability insurance shall apply.

Exclusions from insurance
Article 12

Upon general exclusions defined with the Terms and conditions for liability insurance, the insurance concluded according to these conditions shall not cover the following claims:

1) that arise from environmental pollution,
2) that arise from products with defect that the Insurant produces or distributes,
3) that originate from objects of third parties possessed by (under control or management of) the Insurant, on any grounds,
4) claims caused by the Insurant who steered the vehicle with license plates, except if the damage should occur while the respective vehicle was not used as work machine,
5) that originate from objects of third parties that the Insurant keeps for professional purposes or that are kept or processed by the Insurant while performing its activity registered in the economic register, or damages caused by these things.
6) damages for which the Insurant shall be legally responsible as the employer pursuant to the provisions of positive legal regulations,
7) procedure of treatment, health and other interventions on animals such as castrating, insemination, shoeing, dressage,
8) due to participation on horse, bicycle, motorcycle and car races, boxing and wrestling fights, as well as participation for the preparation for a race, i.e. fight, except if not specially agreed upon extra payment of the premium.

III SPECIAL PROVISIONS FOR SOME SOURCES OF PERIL

Implementation of special provisions
Article 13

Upon liability insurance from certain sources of peril, in addition to basic provisions of these conditions, also special provisions of these conditions shall apply concerning the volume of cover. In case of deviation from the basic provisions, special provisions shall apply.

GEORGIOS KARKANIAS PRESIDENT

3/12/18

Car services, car mechanic workshops and similar
Article 14

Insurance shall refer also to claims from possessing places for storage of motor vehicles, as well as from the sale of the necessary material for the vehicle power (gasoline, oil, lubricator and similar).

If specially agreed, insurance shall cover liability against theft, damage, destruction or breakage of motor vehicles that are on repair, servicing or check-up in car service workshops, if the damage should arise due to:

- towage, driving, moving of the motor vehicle, trial drive outside the workshop (but not more than to the distance of 1 km from the workshop),
- unauthorized usage of the motor vehicle by the insurant's employees or other persons,
- usage of the crane intended for motor vehicle lifting,
- work of the automatic car wash

Exclusions from liability insurance for property claims on vehicles taken over for repair, servicing or check-up
Article 15

The insurer shall not offer insurance cover for:

1) demands for compensation referring to claims that arose as the consequence of inexpert performance of a direct service (repair, servicing, i.e. check-up), which is a professional activity of the insurant,
2) additional costs due to untimely procurement of spare parts, standard equipment, special tools and equipment necessary to carry out the repair,
3) additional expenses due to the price increase,
4) losses on structure elements and spare parts of cars, that were damaged, defective, worn-out or they should have already been repaired in the moment when the insurant took over the car,
5) claims that arose by the subcontractor of the insurant.

Hospitals, sanatoriums, mental homes, health centres, clinics and similar
Article 16

Insurance shall cover also liability for losses due to damage, destruction, disappearance or theft of objects for personal use of the patient and persons accompanying it, if these objects were given to the insurant to keep them safe.

If specially agreed, the insurance shall cover liability for claims due to disappearance and theft of money, securities, watches, documents, jewellery and other valuables only in case if these objects were given to the insurant for being kept and if these things are kept by the insurant in a locked cash box.

3/12/28

Losses caused during the treatment by doctors, midwives, nurses or assistants and other medical personnel through their work that is not according to the rules of the profession, shall be excluded from insurance (liability for professional/expert errors shall be excluded from insurance).

Distribution of electricity
Article 17

If specially agreed, insurance shall cover also cases in which there is liability of the insurant for claims suffered by the consumer of electricity (due to non-allowed deviation from the nominal voltage or frequency, due to stoppage and interruption in the delivery of electricity and in other cases, if the insurant is responsible for claim).

Companies
Article 18

According to these conditions, the term company shall not mean a business company founded and performing activities in order to gain profit (joint-stock companies, partner companies, public companies)

The insurance shall also cover liability:
1) from having meetings, sessions and performances of the company, stipulated by the Articles of Association or other general act of the company;
2) from possessing buildings, land, premises and devices serving exclusively for the needs of the company (e.g. playgrounds, drill fields, rifle ranges and other);
3) members of the company's management and other persons authorized to represent the company;
4) members of the company when performing activities on performances of the company and regarding these performances, in the interest and for the goals of the company.

For rifle clubs, insurance shall cover liability for claims only if they arose on a place determined for shooting.
Insurance shall comprise liability for damage, disappearance and theft of water vehicles (boats, sailboats and other) taken over for storage on condition that there is a constant guard. Damages on motor vessels shall be covered if the motor is fastened to the boat or stored at night in a closed room.

If specially agreed, insurance shall cover also liability of the company for claims from:
1) Performances that exceed the frame of common performances of the company, stipulated with the Articles of Association of the company;
2) Keeping animals;
3) Installing of stands;
4) Usage of sport grounds and devices (skating rings, slopes for sledging and skiing and other);
5) Activities that are performed by the company as incidental (e.g. restaurants in own management, baths and similar).

Local self-administration
Article 19

In addition to liability for claims that occurred by performing and due to performing the function of the body of local self-administration, the insurance shall include also liability from possessing or

3/12/18

using buildings, land, premises and devices that serve exclusively for the needs of performing operations of local self-administration.

Liability from other activities of local self-administration shall be included in insurance only if each source of peril should be insured separately.

Insurance shall comprise also liability of local self-administration for pure property claims.

Liability of the local self-administration for claims that occurred by death or bodily injury of a person due to attack, violence or terror as well as during public demonstrations and events, as well as for other claims that the local self-administration bodies were obliged to prevent according to valid regulations, shall be excluded from insurance.

Organizers of exhibits, performances, fairs and other events
Article 20

Legal and natural persons as organizers of exhibits, performances, fairs and other events, leaders and keepers of exhibition subjects (exhibits), escorts (guards) of persons and objects on exhibition space, for personal and property claims that the insurant causes to the participants, i.e. visitors of these events and for which it is obliged to pay compensation pursuant to the provisions of the law, may be insured by these conditions.

In line with these Conditions, personal liability for damages caused to participants of horse riding, bicycle, motor bicycle competitions, boxing and wrestling, as well as preparation for these competitions is being covered by the insurance only if agreed specially.

Exclusions from insurance against liability of organizers of exhibitions, performances, fairs and other events
Article 21

The insurer shall not compensate damages that:

a) are the consequence of burglary of exhibition subjects/exhibits,

b) that arise as the consequence of loading and unloading (installing, transport) of exhibition objects (exhibits), except for damages caused by accident on the exhibition subjects (exhibits) that are already set,

c) arise on property which was used for the organization of events (including the object/building in which such an event is organized),

d) are the consequence of activities performed by guest performers, artists, competitors, entertainers and stuntmen,

e) are caused by the organizers i.e. managers of exhibitions i.e. staff responsible for the protection of persons and things on exhibitions and events to one another.

Cloakrooms
Article 22

The insurance shall also cover liability of the insurant due to damage, destruction, disappearance or theft (and also due to replacement) of things given to the cloakroom for storage, with a corresponding confirmation (number, paper pad and similar).

Liability of the insurant for claims due to disappearance or theft of money, securities, valuables, watches and documents of any kind shall be excluded from insurance.

The insurer shall be obliged only when the cloakroom has a constant security guard and where other persons, except of the security guard, shall not have any access.

Persons rendering cleaning services
Article 23

Pursuant to these conditions, the insurer shall compensate property claims caused by the insurant to its contractual partner when rendering cleaning services, which understands the damage of property/things, furniture and equipment and mechanical devices, for which the insurant shall be obliged to pay compensation pursuant to the provisions of the law.

Exclusions from liability insurance of the persons rendering cleaning services
Article 24

The insurer shall not compensate:

a) costs that came from complaints on the quality of cleaning, such as costs of repeated cleaning or subsequent correction of lacks,

b) claims caused outside the place designated in the business agreement to be the place for rendering cleaning services,

c) losses due to theft.

Construction, mounting and similar activity
Article 25

The insurance shall also cover liability for claims arising from levelling of the grounds done by the insurant, if the levelling refers to works that the insurant has to do, whereby liability for damages on the object for the building and defence of which the levelling was done, shall be excluded from insurance.

The insurance shall refer also to liability for claims:

1) on the object on which the insurant shall perform construction or mounting works. In case that the construction or mounting works are performed on the existing object that belongs to the investor, the insurance shall cover claims on the part of the object on which works are done by the insurant.
2) immediately caused by damage of underground devices (such as pipes for gas, water, electricity, sewage and similar) if not specially agreed that also indirect claims shall be included;
3) caused by mining in performing the insurant's activity, but not for claims on immovable objects that during mining are on the distance less than 75 metres from the mining point, if not otherwise agreed.

3/12/18

Liability for the following claims shall be excluded from insurance:

1) on neighbouring construction, due to failure to perform appropriate reinforcement (support and similar);
2) on the construction, i.e. prefabricated object that the insurant builds or on which it works;
3) caused from destroying on immovable objects that are in a circle the radius of which corresponds to the height of the object that is being torn down.
4) if a part of the construction object or some construction and handicraft works are insured, the liability insurance of the contractor of construction works shall not cover damages on other parts of that building object or other building works and handicraft works, that are not insured, i.e. that are insured with another policy;
5) if a part of the prefabricated object or some assembling works are insured, the liability insurance of constructor of assembling work shall not cover claims on other parts of that prefabricated object or other assembling works that are not insured, i.e. that are insured with another policy.
6) on things and their integral parts that are being built in, assembled, repaired, processed and similar, on works that were performed or should be performed by the insurant and on a built-in material for damages that the insurant suffers due to additional works that it had to perform, as well as claims on a certain material.
7) in an agreed warranty period after delivery of work to the constructor
8) after the expiry of 1 month since the insurant completed the final works on the object, and the warranty period still did not start to run
9) on things on an existing object, if by the nature of works the damage of things, which thereby belong to the sources of peril, may be expected
10) for such claims on objects on which must be usually counted during mining works, despite of applying prescribed security measures
11) due to conscious breakage/neglecting of technical instructions or instructions of the valid technical body
12) due to a planning error by the insurant
13) due to expert error in technical consulting and supervision
14) on the basis of membership or partnership in the consortium. If the insurant is engaged as the subcontractor on the basis of an agreement, this shall not be considered to be membership or partnership in the consortium.

The following requests for the compensation for damage shall also be excluded from insurance:

1) which do not belong either to claims due to bodily injury or impairment of health of a person or to damages/destructions of material things of third persons – purely financial losses
2) breach of agreed liabilities
3) Conscious breach of legal rules and instructions given by the competent body
4) non observance of general technical rules, technical instructions, norms, standards or decision of the technical inspection or competent body
5) usage of untried statistical, calculation and other methods as well as unchecked constructions and materials
7) aesthetic errors, non-functionality and non-profitability
8) Environmental pollution as well as all types of pollution and emission
9) Nuclear reaction, nuclear radiation or radio active contamination

Bathing resorts, swimming pools
Article 26

Insurance shall cover also liability of the insurant for damage, destruction, disappearance and theft of things for personal usage of the bathing guests, if these were things locked in cabins or other appropriate premises intended for the storage of things or if they were given to the insurant for storage.

The liability for claims due to disappearance and theft of money, securities, valuables, watches, documents and similar, shall be covered by insurance, only if these things were given to the insurant for storage and if they were kept in a locked cash box.

The insurance shall cover also liability for claims caused by the insurant's things that serve for sport, recreation and leisure of the bathing guests.

Insurance shall not cover liability of the insurant for claims on vehicles on water and land and their spare parts, and on things that are on or in the vehicle.

Ports and public warehouses
Article 27

If specially agreed, insurance shall refer also to liability:
1) for claims that arose on somebody else's goods during: reloading, storage, assembling and tightening; weighing, measuring, counting, sorting, marking and increasing; packing and repair of package; transport and moving over the business premises;
2) for claims against pollution of water, shores and other objects.

Insurance shall not comprise liability:
1) for claims caused by pulling, pilotage, storing and protecting of ships; fastening, untying and saving of boats; transport of persons with pilot ships and rope boats; finishing, processing, refining, repair and similar; egalizing, fumigating, cleaning, whitewashing, mixing, drying and similar; international and internal dispatch of goods (forwarding); putting into storage and keeping of goods in cold storage plants;
2) for indirect damages (e.g.: loss of market, drop of prices, export / import ban).

Agricultural and forest activity
Article 28

Insurance shall cover also liability for claims caused by:
1) Keeping animals, but not claims that arise on animals when mating or artificial insemination, except if not otherwise agreed;
2) Usage of funds for killing weeds, as well as preventing and wiping out of plant diseases and pests on the land of the insurant
3) Doing construction works on the land of the insurant, if the preliminary value of these works does not exceed more than 5.000 euro
4) Incidental activities of the insurant, if the annual income from these activities does not exceed the amount of 1.000 euro
Insurance shall cover also liability of the insurant as a private person.

Railroad siding, funiculars, cable railways, rented rail warehouses, cranes and loading and unloading equipment
Article 29

If the activity of the insurant, as the source of peril from policies is performed by using railroad siding, funiculars, cable railways, rented rail warehouses, cranes and other equipment for loading and unloading, the insurance shall include:

1) liability for damages that arose from the use of the railroad siding (forest, field, industrial), funicular or cable railway, if the transport is done without payment of freight;

3/12/18

2) liability for damages from the use of cranes and loading and unloading equipment, if they did not occur when using equipment that according to its construction leaves the burden to fall;
3) contractual liability for claims that arose from the use of the rented rail warehouse towards the railway.

If specially agreed, insurance shall cover:

1) liability for damages due to the damage of railway cars, ships, motor vehicles by using cranes and other loading and unloading equipment;
2) liability for claims that occurred from the usage of the railroad siding (forest, field, industrial), funiculars or cable railways, if the transport is performed with the premium payment.

Private person – liability in that capacity
Article 30

Insurance shall cover liability of the insurant for damages that it causes in the capacity of a private person in everyday life, apart from the performance of the profession or trade:

1) as owner, user or lessee of a flat or separate house intended for living in it, a small garden and courtyard;
2) as an employer towards a person employed in the household;
3) by possessing and usage of a bicycle without a motor;
4) by going in for sports, except of sports worked out professionally, as well as sport that is connected with the usage of a vehicle having a motor of any kind, sport with aircrafts, hunting and fighting sports (box, fencing, wrestling, judo, karate and other);
5) as holder of tame animals that are not used for purposes of economic operations;
6) side or firearms for the possession of which it has a license and that serves for the defence or participation in shooting competitions.

In the same volume as in paragraph 1 hereof, the insurance shall refer also to liability:

1) of the insurant's spouse and children that live with it in the joint household and that it is obliged to support;
2) persons employed in the household of the insurant when performing activities of that household.

If a part of the flat, i.e. building is used for the performance of a profession, the insurance shall not comprise the liability from holding that part of the flat, i.e. building.

If specially agreed, liability for minor children that do not live with the insurant in the joint household shall be included as well.

Roads - maintenance
Article 31

If specially agreed, insurance shall cover also liability of the insurant for damages that occurred due to:

1) inappropriate protection fences or their inexistence, as well as inexistence of corresponding traffic signs and warnings of dangerous places on roads;
2) not mowing of grass and non-maintenance of plants on the road land;
3) various drifts on the road (snow, earth, garbage and other);
4) not strewing of the road in order to prevent the consequences of freezing.

3192/18

Sport events
Article 32

Insurance shall comprise liability of the organizer of bicycle, motorcycle and car races during the race itself.

If the race is held on open tracks, such a track must be secured by the public security body.

Schools, institutions for education, upbringing, guarding and similar
Article 33

Insurance shall cover also liability of the insurant for losses due to damage, destruction, disappearance and theft of pupils' and cadets' things, only if the things are in corresponding premises used for the storage of these things.

Insurance against liability due to theft or disappearance of clothes, shoes or equipment of pupils and students during the classes may be agreed without concluding the basic insurance according to these conditions.

Liability for losses due to disappearance and theft of money, securities, precious metals, numismatic, philatelist and other collections and valuables of all kinds shall be excluded from insurance.

Insurance shall also cover liability:
1) of members of school councils and councils of educational and other institutions that manage the school, i.e. the institution, according to legal regulations and general acts of the school, i.e. of the educational and other institution;
2) from organizing excursions, picnics, school events and similar

Schools and educational and training institutions for the management of all types of:

1) motor vehicles, aircrafts and other vehicles
2) all types of sport activities (riding, parachute jumping, paragliding, gliding...)

shall be excluded from insurance.

Hotel keeping/restaurant keeping activity
Article 34

According to these conditions, a hotel-keeping/restaurant keeping activity shall understand an activity performed by: hotels, restaurants, boarding-houses, rest homes, organized camps, students', solitary persons' and tourist homes and similar.

Insurance shall cover also liability of the insurant due to damage, destruction, disappearance or theft of things used for personal needs of guests that they brought into the hotel object. Things for personal usage shall be considered to be also an amateur camera with equipment, weekend and camping equipment, radio and TV set, record player with records and cassette player, binoculars, hunting rifle, personal guns and sport equipment.

Insurance shall not refer to liability for claims that occurred:

1) on guests' things during their use, processing or work on them by the insurant;

3/12/18

2) due to disappearance or theft of guests' things if they were brought to the premises that are accessible to everybody, in which food and beverage are served and similar, except if given to the cloakroom for being kept.

If specially agreed, insurance shall cover also liability of the insurant for damages on the vehicle, according to the provisions in **Vehicles - storage**.

Liability for claims due to disappearance or theft of money, jewellery, securities and documents of any kind shall be covered with insurance, if these things were given to the insurant and placed in a locked cash box.

Insurance shall comprise also liability

1) from auxiliary plants that belong to the insurant (such as washing rooms, kitchens, bakeries, butcher shops and similar) and which serve exclusively for the performance of the insurant's activity;
2) from possessing things, premises and playing fields for sport and recreation that are used by guests free of charge.

Entertainment devices
Article 35

Insurance shall cover also liability for claims that arise during the assembling and disassembling of entertainment devices.

Fire companies
Article 36

Insurance shall comprise liability for claims caused during drills, actions and offering help.

Insurance shall cover also personal liability of the members of the company from performing activities in the capacity of a fireman.

Insurance shall refer also to liability of the fire company as the owner, lessee or usufructurary of the land, buildings and premises that serve exclusively for the needs of the company.

Liability for claims on things for the rescue of which the company was called shall be excluded from insurance.

Veterinarians, veterinary clinics and stations
Article 37

Insurance shall cover also liability of the insurant due to the injury of animals during treatment.

If specially agreed, insurance shall cover also liability for claims due to injury of animals referring to castration, gas treatment and artificial insemination.

Vehicles - storing
Article 38

Insurance shall cover also liability of the insurant for damage, destruction, disappearance, theft and replacement of vehicles left for storage (motor vehicles, trailers, motorcycles and bicycles).

GEORGIOS KARKANIAS PRESIDENT

3/12/18

Insurance shall also cover damages on vehicles caused by the insurant in the time period when it renders services for the needs of guests like parking, storing in a garage and similar in the area of the hotel object.

If the vehicle is not placed in a locked garage, claims on objects that are on or in the vehicle, as well as on certain parts of the vehicle, except of things that are produced serially with the vehicle and things that according to the regulations had to be in the vehicle, shall be included from insurance.

The insurer shall be obliged only when the parking lot for vehicles is precisely defined, marked and the vehicles are regularly stored and secured, on condition that there is always a guard.

Buildings and lands (possession, i.e. usage)
Article 39

Insurance shall cover also liability for sources of peril from article 4, paragraph 2 hereof.

Insurance shall cover also liability:

1) for claims caused by persons in charge of maintenance and cleaning of buildings, i.e. land as the source of peril;
2) for claims caused by persons that take the place of an insurant in the capacity of a new beneficiary, usufructuary or trustee in bankruptcy;
3) for damages from the usage of children's playgrounds with belonging equipment for the entertainment of children, if the playground belongs to the building as the source of peril from the policy;
4) from possessing a garden, if it is used for own purposes and if it belongs to the building or land as the source of peril from the policy.

If the building has several users, i.e. owners, the insurer shall not be obliged to compensate for the damage caused by one user, i.e. owner to the other owner, its spouse and persons that it supports.

Requirements of the owner, i.e. user of the flat, its spouse and persons that it supports shall be included in the insurance, if they do not participate in the joint liability for claims with other owners, i.e. users of the building.

Animals
Article 40

Insurance shall cover also the liability of the guard of animals and of other persons that take care about animals that are mentioned in the insurance policy.

Insurance shall cover liability for claims from acts of mating animals, if it has been specially agreed.

Liability from keeping animals such as horses, mules and other towing animals as well as dogs shall be covered by insurance only if insurance of another source of peril (e.g. agricultural farm, liability as a private person) was also concluded.

The liability of the insurer for losses due to damage/injury, destruction, loss or disappearance of somebody else's placed animals (placing in somebody else's stables) shall be excluded.

3/12/18

The insurer shall be obliged to compensate the costs of the veterinary check-up of the insured animals in case of existence of a contagion with the rabies virus up to 1% of the insurance sum mentioned in the policy.

In case of renting out, leasing out of animals, insurance shall not apply, but damages caused by the activity of these animals towards third parties shall be accepted into insurance.

Changes of insurance conditions
Article 41

These conditions may be changed or amended in the way and by procedure in which they were passed, upon prior obtaining of the opinion of an authorized actuary and notifying the Agency for supervision of insurance of Republic of Montenegro.

The policy holder shall be informed about changes and amendments of the Conditions, in compliance with the law.

Implementation of Terms and Conditions for liability insurance and legal regulations
Article 42

Concerning issues that are not regulated with these conditions, the provisions of the Terms and Conditions for liability insurance, i.e. the Law on obligatory relations shall apply.

For issues that are regulated contrary to the provisions of the Terms and Conditions for liability insurance, provisions of these conditions shall apply.

III FINAL PROVISIONS

Article 43

These conditions shall take effect as of the adoption date, and the Terms and conditions for general liability insurance dated June 8th 2008 shall cease to be valid.

President of the Management Board

3/12/18

3172178

On the basis of the Law on Insurance of Republic of Montenegro and Corporation of „UNIQA neživotno osiguranje" a.d. Podgorica, the following business policy act was passed at the meeting of the Management Board held on **March 11th 2013**:

SPECIAL CONDITIONS
FOR CONTRACTORS ALL RISK INSURANCE
(translation)

GEORGIOS KARKANIAS
PRESIDENT

3/12/18

Whereas the Insured named here has made to the UNIQA neživotno osiguranje a.d. (hereinafter called the "Insurer") a written proposal which together with any other statements made in writing by the Insured for the purpose of this Policy is deemed to be incorporated herein,

Now this Policy of insurance witnesses that subject to the Insured having paid to the Insurer the premium mentioned in the Schedule and subject to the terms, exclusions, provisions and conditions contained herein or endorsed hereon the Insurer will indemnify the Insured in the manner and to the extent hereinafter provided.

General exclusions

The Insurer will not indemnify the Insured in respect of loss, damage or liability directly or indirectly caused by or arising out of or aggravated by

a) war, invasion, act of foreign enemy, hostilities (whether war be declared or not), civil war, rebellion, revolution, insurrection, mutiny, riot, strike, lockout, civil commotion, military or usurped power, a group of malicious persons or persons acting on behalf of or in connection with any political organization, conspiracy, confiscation, commandeering, requisition or destruction or damage by order of any government de jure or de facto or by any public authority;
b) nuclear reaction, nuclear radiation or radioactive contamination;
c) wilful act or wilful negligence of the Insured or of his representatives;
d) cessation of work whether total or partial.

In any action, suit or other proceeding where the Insurer allege that by reason of the provisions of Exclusion a) above any loss, destruction, damage or liability is not covered by this insurance the burden of proving that such loss, destruction, damage or liability is covered shall be upon the Insured.

Period of cover

The liability of the Insurer shall commence, notwithstanding any date to the contrary specified in the Schedule, directly upon commencement of work or after the unloading of the items entered in the Schedule at the site. The Insurer' liability expires for parts of the insured contract works taken over or put into service.

At the latest the insurance shall expire on the date specified in the Schedule. Any extensions of the period of insurance are subject to the prior written consent of the Insurer.

GEORGIOS KARKANIAS
PRESIDENT

3/12/18

General conditions

1. The due observance and fulfilment of the terms of this Policy in so far as they relate to anything to be done or complied with by the Insured and the truth of the statements and answers in the questionnaire and proposal made by the Insured shall be a condition precedent to any liability of the Insurer.
2. The Schedule and the Section(s) shall be deemed to be incorporated in and form part of this Policy and the expression "this Policy" wherever used in this contract shall be read as including the Schedule and the Section(s). Any word or expression to which a specific meaning has been attached in any part of this Policy or of the Schedule or of the Section(s) shall bear such meaning wherever it may appear.
3. The Insured shall at his own expense take all reasonable precautions and comply with all reasonable recommendations of the Insurer to prevent loss, damage or liability and comply with statutory requirements and manufacturers' recommendations.
4. a) Representatives of the Insurer shall at any reasonable time have the right to inspect and examine the risk and the Insured shall provide the representatives of the Insurer with all details and information necessary for the assessment of the risk.
   b) The Insured shall immediately notify the Insurer by telegram and in writing of any material change in the risk and cause at his own expense such additional precautions to be taken as circumstances may require, and the scope of cover and/or premium shall, if necessary, be adjusted accordingly.

   No material alteration shall be made or admitted by the Insured whereby the risk is increased, unless the continuance of the insurance is confirmed in writing by the Insurer.

5. In the event of any occurrence which might give rise to a claim under this Policy, the Insured shall

   a) immediately notify the Insurer by telephone or telegram as well as in writing, giving an indication as to the nature and extent of loss or damage;
   b) take all steps within his power to minimize the extent of the loss or damage;
   c) preserve the parts affected and make them available for inspection by a representative or surveyor of the Insurer;
   d) furnish all such information and documentary evidence as the Insurer may require;
   e) inform the police authorities in case of loss or damage due to theft or burglary. The Insurer shall not in any case be liable for loss, damage or liability of which no notice has been received by the Insurer within 14 days of its occurrence.

6. Upon notification being given to the Insurer under this condition, the Insured may carry out the repairs or replacement of any minor damage; in all other cases a representative of the Insurer shall have the opportunity of inspecting the loss or damage before any repairs or alterations are effected. If a representative of the Insurer does not carry out the inspection within a period of time which could be considered adequate under the circumstances, but not more than 14 days from the receipt of the insured´s notification, the Insured is entitled to proceed with the repairs or replacement. The liability of the Insurer under this Policy in respect of any item sustaining damage shall cease if said item is not repaired properly without delay. The Insured shall at the expense of the Insurer do and concur in doing and permit to be done all such acts and things as may be necessary or required by the Insurer in the interest of any rights or remedies, or of obtaining relief or indemnity from parties (other than those insured under this Policy) to which the Insurer are or would become entitled or which is or would be subrogated to them upon their paying for or making good any loss or damage under this Policy, whether such acts and things are or become necessary or required before or after the Insured's indemnification by the Insurer.

7. If any difference arises as to the amount to be paid under this Policy (liability being otherwise admitted), such difference shall be referred to the decision of an arbitrator to be appointed in writing by the parties in difference or, if they cannot agree upon a single arbitrator, to the decision of two arbitrators, one to be appointed in writing by each of the parties within one calendar month after

GEORGIOS KARKANTAS
PRESIDENT

3/12/18

having been required in writing so to do by either of the parties, or, in case the arbitrators do not agree, of an umpire to be appointed in writing by the arbitrators before the latter enter upon the reference. The umpire shall sit with the arbitrators and preside at their meetings. The making of an award shall be a condition precedent to any right of action against the Insurer.

8. If a claim is in any respect fraudulent, or if any false declaration is made or used in support thereof, or if any fraudulent means or devices are used by the Insured or anyone acting on his behalf to obtain any benefit under this Policy, or if a claim is made and rejected and no action or suit is commenced within three months after such rejection or, in the case of arbitration taking place as provided herein, within three months after the arbitrator or arbitrators or umpire have made their award, all benefit under this Policy shall be forfeited.

9. If at the time any claim arises under the Policy there is any other insurance covering the same loss, damage or liability, the Insurer shall not be liable to pay or contribute more than their rateable proportion of any claim for such loss, damage or liability.

Section I – Material damage

The Insurer hereby agree with the Insured that if at any time during the period of cover the items or any part thereof entered in the Schedule shall suffer any unforeseen and sudden physical loss or damage from any cause, other than those specifically excluded, in a manner necessitating repair or replacement, the Insurer will indemnify the Insured in respect of such loss or damage as hereinafter provided by payment in cash, replacement or repair (at their own option) up to an amount not exceeding in respect of each of the items specified in the Schedule the sum set opposite thereto and not exceeding in any one event the limit of indemnity where applicable and not exceeding in all the total sum expressed in the Schedule as insured hereby.

The Insurer will also reimburse the Insured for the cost of clearance of debris following upon any event giving rise to a claim under this Policy provided a separate sum therefor has been entered in the Policy.

Special exclusions to Section 1

The Insurer shall not, however, be liable for:

a) the deductible stated in the Schedule to be borne by the Insured in any one occurrence;

b) consequential loss of any kind or description whatsoever including penalties, losses due to delay, lack of performance, loss of contract;

c) loss or damage due to faulty design;

d) the cost of replacement, repair or rectification of defective material and/or workmanship, but this exclusion shall be limited to the items immediately affected and shall not be deemed to exclude loss of or damage to correctly executed items resulting from an accident due to such defective material and/or workmanship;

e) wear and tear, corrosion, oxidation, deterioration due to lack of use and normal atmospheric conditions;

f) loss or damage to construction plant, equipment and construction machinery due to electrical or mechanical breakdown, failure, breakage or derangement, freezing of coolant or other fluid, defective lubrication or lack of oil or coolant, but if as a consequence of such breakdown or derangement an accident occurs causing external damage, such consequential damage shall be indemnifiable;

g) loss of or damage to vehicles licensed for general road use or waterborne vessels or aircraft;

GEUKHUS RANKANIAS PRESIDENT

3/12/18

h) loss of or damage to files, drawings, accounts, bills, currency, stamps, deeds, evidences of debt, notes, securities, cheques;

i) loss or damage discovered only at the time of taking an inventory.

Provisions applying to Section 1

Memo 1 – Sums insured

It is a requirement of this insurance that the sums insured stated in the Schedule shall not be less than

for item 1: the full value of the contract works at the completion of the construction, inclusive of all materials, wages, freight, customs duties, dues, and materials or items supplied by the Principal;

for items 2 and 3: the replacement value of construction plant, equipment and machinery; which shall mean the cost of replacement of the insured items by new items of the same kind and capacity;

and the Insured undertakes to increase or decrease the amounts of insurance in the event of any material fluctuation in wages or prices provided always that such increase or decrease shall take effect only after the same has been recorded in the Policy by the Insurer.

If, in the event of loss or damage, it is found that the sums insured are less than the amounts required to be insured, then the amount recoverable by the Insured under this Policy shall be reduced in such proportion as the sums insured bear to the amounts required to be insured. Every object and cost item is subject to this condition separately.

Memo 2 – Basis of loss settlement In the event of any loss or damage the basis of any settlement under this Policy shall be

a) in the case of damage which can be repaired – the cost of repairs necessary to restore the items to their condition immediately before the occurrence of the damage less salvage, or
b) in the case of a total loss – the actual value of the items immediately before the occurrence of the loss less salvage,

however, only to the extent the costs claimed had to be borne by the Insured and to the extent they are included in the sums insured and provided always that the provisions and conditions have been complied with.

The Insurer will make payments only after being satisfied by production of the necessary bills and documents that the repairs have been effected or replacement has taken place, as the case may be. All damage which can be repaired shall be repaired, but if the cost of repairing any damage equals or exceeds the value of the items immediately before the occurrence of the damage, the settlement shall be made on the basis provided for in b) above.

The cost of any provisional repairs will be borne by the Insurer if such repairs constitute part of the final repairs and do not increase the total repair expenses.

The cost of any alterations, additions and/or improvements shall not be recoverable under this Policy.

GEORGIOS KARKANIAS
PRESIDENT

3/12/18

Memo 3 – Extension of cover

Extra charges for overtime, nightwork, work on public holidays, express freight are covered by this insurance only if previously and specially agreed upon in writing.

SECTION 2 – Third party liability

The Insurer will indemnify the Insured up to but not exceeding the amounts specified in the Schedule against such sums which the Insured shall become legally liable to pay as damages consequent upon
a) accidental bodily injury to or illness of third parties (whether fatal or not),
b) accidental loss of or damage to property belonging to third parties
occurring in direct connection with the construction or erection of the items insured under Section 1 and happening on or in the immediate vicinity of the site during the period of cover.

In respect of a claim for compensation to which the indemnity provided herein applies, the Insurer will in addition indemnify the Insured against
a) all costs and expenses of litigation recovered by any claimant from the Insured, and
b) all costs and expenses incurred with the written consent of the Insurer,
provided always that the liability of the Insurer under this Section shall not exceed the limits of indemnity stated in the Schedule.

Special exclusions to Section 2

The Insurer will not indemnify the Insured in respect of

1. the deductible stated in the Schedule to be borne by the Insured in any one occurrence;

2. the expenditure incurred in doing or redoing or making good or repairing or replacing anything covered or coverable under Section 1 of this Policy;

3. damage to any property or land or building caused by vibration or by the removal or weakening of support or injury or damage to any person or property occasioned by or resulting from any such damage (unless especially agreed upon by endorsement);

4. liability consequent upon

   a) bodily injury to or illness of employees or workmen of the Contractor(s) or the Principal(s) or any other firm connected with the project which or part of which is insured under Section 1, or members of their families;
   b) loss of or damage to property belonging to or held in care, custody or control of the Contractor(s), the Principal(s) or any other firm connected with the project which or part of which is insured under Section 1, or an employee or workman of one of the aforesaid;
   c) any accident caused by vehicles licensed for general road use or by waterborne vessels or aircraft;
   d) any agreement by the Insured to pay any sum by way of indemnity or otherwise unless such liability would have attached also in the absence of such agreement.

Special conditions applying to Section 2

1. No admission, offer, promise, payment or indemnity shall be made or given by or on behalf of the Insured without the written consent of the Insurer who shall be entitled, if they so desire, to take over and conduct in the name of the Insured the defence or settlement of any claim or to prosecute for their own benefit in the name of the Insured any claim for indemnity or damages or otherwise and shall have full discretion in the conduct of any proceedings or in the settlement of any claim and the Insured shall give all such information and assistance as the Insurer may require.

3/12/18

2. The Insurer may so far as any accident is concerned pay to the Insured the limit of indemnity for any one accident (but deducting therefrom in such case any sum or sums already paid as compensation in respect thereof) or any lesser sum for which the claim or claims arising from such accident can be settled and the Insurer shall thereafter be under no further liability in respect of such accident under this Section.

General provisons

The integral part of this Annex are following Causes stated below, which preconditioned to the types of works, the way of construction, natural or any other circumstances and conditions (which refer or efect on construction performance), amend, expand, narrow, exclude or present other changes of contracting conditions.

On the basis of the Law on Insurance (»Official Gazette of the Republic of Montenegro« no. **078/06** and **19/07**) and the Articles of Incorporation of „UNIQA neživotno osiguranje" a.d. Podgorica, the following business policy act was passed at the meeting of the Management Board held on August 8th 2009:

UNIQA
osiguranje

CONDITIONS
FOR PROFESSIONAL LIABILITY INSURANCE AND LIABILITY INSURANCE FOR PRODUCTS WITH DEFECT

GEORGIOS KARKANIAS
PRESIDENT

3192198

I INTRODUCTORY PROVISIONS

Meaning of certain expressions
Article 1

In these conditions, certain expressions shall have the following meaning:

Insurer – joint stock insurance company with which an insurance agreement shall be concluded, »Uniqa neživotno osiguranje« a.d.

Proposer – person that wants to conclude an insurance agreement with the Insurer and for that purpose submits a written Proposal to the Insurer;

Policy holder – person concluding an insurance agreement with the Insurer and paying the insurance premium,

Insurant - person whose liability is covered by insurance,

Insurance policy – written document (on the form determined by the Insurer) about the concluded insurance agreement.

Insurance premium – amount paid on the grounds of an insurance agreement.

Proposal – written proposal of the Proposer made to the Insurer in order to conclude an insurance agreement.

Insurance sum per one loss event – max. liability of the insurer by an insured case,

Aggregate insurance sum (annual limit) – max. liability of the insurer for all insured cases during the insurance period,

Source of peril – activity (profession), objects (movable and immovable), legal relation or a certain feature from which liability as risk covered by this insurance may occur.

Third party – a natural or legal person using the services, i.e. product of the Insurant on the basis of an agreement, legal regulation or another written act.

Pure financial loss – a loss that exclusively caused a financial loss and is in no way connected with the damage on things or the damage on persons.

Implementation of conditions
Article 2

These conditions shall apply to Terms and Conditions for liability insurance.

3/12/18

Insured risks
Article 3

Pursuant to these conditions, the following risks may be insured:

1) professional liability risk of the insurant

2) Liability risk of the insurant for products with defect

Provisions of these Liability Insurance conditions shall apply on losses that occur as a consequence of performing professional activity of the Insurant and from liability insurance for products with defect.

Insurance against new sources of peril
Article 4

If specially agreed, the cover from insurance shall be expanded also to liability from new sources of peril, that occurred with the appearance of new sources of peril at the insurant, i.e. with the change of legal regulations that regulate the activity of the insurant, after concluding the insurance agreement, if no separate insurance was concluded for that new arising source of peril.

Immediately after the appearance of a new source of peril, the insurant shall be obliged to inform the insurer in writing about the appearance of a new source of peril.

The insurer shall be obliged to inform the insurant about the acceptance into cover of new sources of peril within 8 (eight) days and on the grounds of a written information from the previous paragraph. If the insurer should not respond within eight days, it shall be considered that the new source of peril was included in insurance, if the mentioned new source of peril should be in line with the valid insurance conditions and premium tariff.

The insurer shall keep the right of calculating additional premium for the cover of new sources of peril from the previous paragraphs hereof, as well as the right of not accepting new sources of peril and it shall inform the policy holder in written form about that within the deadline mentioned in the previous paragraph.

The insurance sum that was agreed on the policy for previously insured sources of peril shall be valid for new sources of peril, too. If the policy should contain various insurance sums for some sources of peril, the insurance sum agreed for that certain source of peril shall be valid.

Inclusions in coverage
Article5

Unless it is specifically stipulated and quoted in the insurance policy and additional premium is paid, insurance coverage is extended to:

1. other legal or natural person as an additional insurant on which these conditions provide protection from the damage claims of third parties
Insurance coverage that provides to an additional insurant is limited only on its liability arising from the activities of the insurant and/or liability arising from his activity in connection with the activities of the insurant.

2. cross over liability of several insurants who are covered by insurance and listed in the insurance policy, in accordance with point 1. of this paragraph, i.e. insurance coverage is extended to the mentioned insurants so that will be considered that all the insurants have

GEORGIOS KARKANIAS
PRESIDENT

3/12/18

concluded this insurance separately and they can ask each other for damage claims.

Total obligation of the Insurer for the agreed inclusion and expansion of coverage under the previous paragraphs does not exceed agreed insurance sum for the entire period.

Conclusion of insurance agreements

For the conclusion of a professional liability insurance agreement and liability agreement for products with defect, the provisions of Terms and Conditions shall apply, except if not otherwise stipulated with these conditions.

The insurance agreement may be concluded on the basis of an oral or written proposal of the policy holder done to the insurer.

If the insurance agreement is concluded on the basis of the written proposal and the Insurer does not reject it within 8 (eight) days from the date when the proposal arrived to the Insurer, it shall be considered accepted the proposal and that the insurance agreement is concluded when the proposer/ policy holder has signed a proposal of insurance.

The signature of the proposer/policy holder on the insurance proposal shall be considered to be the signature on the policy.

II SPECIAL PROVISIONS FOR PROFESSIONAL LIABILITY INSURANCE

Article 6

Provisions of Terms and conditions for liability insurance and provisions of these conditions shall apply to professional liability insurance.

Pursuant to these conditions, professional liability insurance shall understand insurance cover for the made professional error, badly done or inexpert proceeding, i.e. omission of the service renderer (insurant) the consequence of which shall be:

- Pure financial loss
- Death, impairment or worsening of health of the third party.
- Additional costs or profit loss of the client that arose due to non-professional and inexpert performance of services.

Insured case

Article 7

An insured case shall be a loss that was caused to the third party by professional error, badly done or inexpert proceeding, i.e. omission of the insurant and on the grounds of which the request for compensation from insurance on the basis of liability might occur.

It shall be considered that the insured case occurred at the moment when the loss event the consequence of which was the loss from the previous paragraph hereof, started producing effect:

- If the insured case is based on a written document of any kind, it shall be considered that the moment of its effect occurred at the moment when the insurant signed that document
- If the insured case occurred due to omission or oversight, it shall be considered that the insured case started with effect on the moment when an omitted action should have been

3/12/18

taken at the latest in order to avoid damage.

- In all other cases it shall be considered that the insured case started producing effect on the moment when at the latest it issued a wrong instruction or made a wrong action.

In cases of occurrence of serial claims, provisions of the Terms and conditions for liability insurance shall apply.

Temporal insurance validity
Article 8

The insurer shall be liable if the claim occurred during the insurance validity, i.e. not later than in the period of two years from the moment of the insurance end, and the loss event started with effect in the period of the insurance duration.

General exclusions concerning professional liability insurance
Article 9

Upon general exclusions defined with the Terms and conditions for liability insurance, the insurance concluded by these conditions shall not cover the following claims:

1) claims excluded with the Conditions for general liability insurance and terms and conditions for liability insurance

2) claims of aesthetic nature that occurred as the consequence of inadequate rendering of services,

3) liability of the insurant on the basis of contractual expansion of its liability also to cases for which by law it is not liable

4) claims caused outside the territory of the Republic of Montenegro, except if the territorial insurance validity is not expanded with the insurance agreement,

5) claims on roads that are not the result of accident and which were caused by vehicles or work machines the insurant was operating with,

6) losses or damages on constructions (e.g. roads, embankments, supporting walls etc.) due to weight or movement of heavy machines and vehicles, or claims caused by wading of the soil/land or crops,

7) claims from activities the consequence of which is environmental pollution,

8) claims caused by original agricultural products (farming products, products of cattle and fish raising), and hunting products.

1) Liability insurance for architects, planners, engineers, consultants and persons performing supervision

Article 10

Upon these conditions, legal and natural persons that offer services in the feature of the engineer or supervisory bodies, i.e. architects and planners may be insured, for claims that are caused as the consequence of a made professional error, badly done or inexpert proceeding, i.e. omission and which is contrary to the rules of the profession.

Insurance shall cover claims that arise during the performance of operations by the insurant, architects, engineers, planners or supervisory bodies that are employed or are in another contractual relation which is not employment with the insurant and for which the insurant shall be

GEORGIOS KARKANIAS
PRESIDENT

3 | 12178

obliged to pay compensation pursuant to the provisions of the Law on obligatory relations and other positive legal regulations.

The insurer shall cover requests for compensation that result from

1) errors in plans and projects that the insurant worked out or revised,
2) errors in plans and projects done by architects, engineers that are employed or in another contractual relation with the Insurant,
3) claims from the field of operations of the supervisory engineer shall be covered by this insurance, if the supervision activity is done by the insurant concerning the project that is worked out on the basis of own plans.

Exclusions from liability insurance of architects, planners, engineers - consultants and persons performing supervision

Article 11

In addition to exclusions mentioned in the insurance conditions for general liability, the insurant shall not compensate the following:

1) when the insurant performs the activity out of the conditions prescribed by law and when it has no corresponding licenses or permits
2) when the insurant participates or should participate in performing works, building or assembling, or processing of a product in the feature of the main contractor, subcontractor, supplier, entrepreneur or in any other feature.
3) exceeding of authorities that result from the contract on the basis of which the Insurant performs an activity for the client of the Insurant.
4) in case when the insurant knew or could have known that there were legal reasons due to which it was obliged to reject to perform the activity for its client.
5) Activity of the insurant as the advisor, leader or employee in a company, association, union or enterprise of any kind.
6) Prognoses of optimization, speculation, terms and similar.
7) To miss the terms for the delivery of plans and drawings, if these terms are not determined by law or regulation
8) Explanation within the duration of works and delivery deadlines
9) Claims referring to giving licenses
10) Requests for claims that would unavoidably occur even during regular planning and/or building of objects. Costs of defence against requests that refer to the aforementioned are covered with the insurance cover.
11) Exceeding of the calculation if it is exclusively in calculation, and there are no lacks in the construction itself
12) Violation of the obligation of secrecy
13) Losses at loans or capital investments
14) violation of copyrights, patents, trade marks
15) Additional costs incurred due to repeated planning/building because of difficulties in the procurement or fitting of materials,
16) Costs that result from non-observing the final deadlines for planning or additional costs due to such a delay,
17) Losses or additional costs that result from price increase,

3/12/18

18) Losses that result from lack of aesthetic nature or obsolescence of the subject of work,

19) Losses that result due to reasons attributed as the subcontractor's fault

20) Losses that result from non-obtaining corresponding official licenses,

21) Losses due to interruption of work or production loss due to an insured event or loss of profit of the damaged party/submitter of the request for compensation,

22) Losses that result from errors in the data base that is included in technical and financial plans on condition that these data were not provided, i.e. checked by an engineer.

2) Liability insurance for persons rendering security services

Article 12

Upon these conditions legal and natural persons that perform operations of security protection of people and property may be insured against liability for damages that might appear for the person ordering services of security or a third party referring to the performance of security services and that are the consequence of the made professional error, badly done or inexpertly done proceeding i.e. omission.

The insurant shall be any natural or legal entity (entrepreneur or business company) performing operations regarding security and that possesses a corresponding license issued by the competent body in line with the law.

Insurance shall cover claims that arise when rendering security services to the insurant or persons that are employed at the insurant and for whom the insurant is obliged to pay indemnity pursuant to the provisions of the Law.

The insurer shall cover requests for compensation that result from:

a) injuries of persons (death, permanent disability, bodily injury) that are suffered by third parties due to implementation of excessive force during the property protection,

b) injuries of persons (death, permanent disability, bodily injury) that are caused to third persons (but excluding persons that illegally break through the protected zone or object) or their assigners or officials when protecting persons or property,

c) losses or damages on protected objects, furniture and devices, caused when protecting persons and property,

on condition that the liability of the Insurant for the caused losses may be determined in all three cases.

Exclusions from liability insurance of persons offering security services

Article 13

The insurer shall neither compensate for damages that result from illegal usurping of the guarded property/objects (theft, burglary) nor for damages covered by other insurances.

7) Insurance of professional liability of doctors and other medical staff

Article 14

According to these conditions, the subject of insurance shall be the civil and legal liability of the insurant for losses that occurred due to death, bodily injury or health impairment of third parties that occurred as the consequence of a professional error of the doctor or other medical staff.

3/12/18

On behalf of the insurant, the insurer shall indemnify the submitter of the request for compensation for damages due to impairment of health, bodily injury or death that were caused because of the violation of professional rules when performing medical services for which the Insurant is obliged to pay compensation pursuant to positive legal regulations of the Republic of Montenegro.

Exclusions from professional liability insurance of doctors and other medical staff

Article 15

This insurance shall not cover the following cases:

1) Losses that might occur from the activity of the insurant that is performed without the permit of the competent body,
2) Losses that arise from handling movable and immovable property/objects which is necessary for rendering medical services,
3) Costs suffered by the submitter of the demand for compensation due to the non-performance or delay in performing services,
4) Expenses which refer to the repeated performance of defective services or expenses necessary to correct lacks,
5) Loss of objects that the patient takes with it,
6) Losses caused during surgery in the field of plastic/aesthetic surgery except for reconstruction surgery being the consequence of an accident and/or congenital defect.
7) Negative effect of x-rays or other forms of radiation, including also losses caused by radioactive materials,
8) Loss – bodily injury, worsening of the general health conditions that may be attributed to the transport by an ambulance vehicle,
9) Losses caused during the activity of a university or academic student, health care of a specialist or pupil of a secondary medical school within education, practice or examinations,
10) Expenses for criminal charges or subjects in court against the media,
11) Other losses from liability which were not caused in regard to the medical profession.
12) Offered medical help without valid diagnostic or therapeutic support;
13) Usage of medicine intended for body weight reduction;
14) Activities of a dentist in general anaesthesia;
15) Demands for compensation that are in any way connected with the infection with HIV and hepatitis viruses;
16) Fines determined by courts and state bodies;
17) Clinical examinations; intra-hospital infections;
18) All procedures referring to safeguarding, transport and blood tests concerning blood transfusion;
19) All actions referring to artificial insemination;
20) Medical procedures of an unqualified or insufficiently qualified medical staff;
21) Accidents at work/illnesses due to work.

GEORGIOS KARKANIAS
PRESIDENT

3/12/18

8) Liability insurance of physical therapists

Article 16

Upon these conditions persons rendering services in the feature of a physical therapist may be insured for losses due to death or health impairment of third parties that arise as the consequence of the made professional error, badly done or inexpert procedure, i.e. omission and which are contrary to the rules of the profession.

Insurance shall cover claims that arise when performing jobs by the insurant, physical therapist that is employed or in another contractual relation which is not employment with the insurant, and for which the insurant is obliged to pay indemnity pursuant to the provisions of the Law on obligatory relations and other positive legal regulations.

Exclusions from liability insurance of physical therapists

Article 17

This insurance shall not cover the following cases:

a) jobs/activities performed by the Insurant without corresponding license,

b) disturbance of the body of aesthetic nature and psychic health disturbance,

c) losses from liabilities that were not caused in relation to the activity of the Insurant.

9) Liability insurance of auditors, actuaries, tax advisors, renderers of accounting services, court experts and lawyers

Article 18

These conditions shall provide insurance cover for pure financial losses suffered by third parties due to professional error or omission of the insurant in performing jobs related to rendering professional services.

According to these conditions, third parties shall be considered to be persons that are not subjects of the insurance agreement, i.e. which are not the policy holder, insurant or insurer.
According to these conditions third parties shall not be considered to be:

1. employees, i.e. each natural person that is employed at the insurant, as well as any other natural person that on any grounds performs the job or offers services or is getting trained for work at the insurant
2. spouse and other members of the household and other persons that the isurant is obliged to support;

a) Authorized auditors

Article 19

This insurance shall cover liability for caused damage, if it occurred due to professional accounting or auditing activity of the Insurant, if the activity is performed in line with the Law on accounting and audit.

The insurant shall be a natural person having the title of an authorized auditor and that is the member of the Chamber of authorized auditors of the Republic of Montenegro or that works in an auditing company that is registered by the Chamber and which performs auditing operations in line with the Law on accounting and audit.

GEORGIOS KARKANIAS PRESIDENT 3/12/18

An insured case shall be an event the consequence of which shall be pure financial loss that was caused to the client by professional error, badly done or inexpert proceeding, i.e. omission of the insurant concerning:

- audit of financial reports of business companies covered with the Law on accounting, determination of the regularity, reliability of financial reports,
- assessment, verification, giving expert opinions in the meaning of offering consulting services of the auditor concerning establishment, transformation i.e. cease of work of business companies,
- jobs of a financial, tax and accounting expert referring to the establishment, transformation, continuation of operations, financial management and IT system of the business companies
- giving expert opinions and advice regarding that,
- performance of other tasks of the auditor, that are stipulated by the law.

b) Authorized actuaries
Article 20

The insurant shall be a natural person having the title of an authorized actuary and performing actuary operations in compliance with the Law on Insurance.

This insurance shall cover the liability for caused damage if it occurred from professional actuary activity of the Insurant, if the activity is performed in line with the Law on insurance.
The activity of the Insurant shall understand to give opinion about:

- the manner of calculating the insurance premium tariff;
- whether technical reserves were created in line with the regulations and acts of the insurance company's business policy acts;
- the business policy acts in the procedure of their passing, i.e. in the procedure of changing and amending and implementing the business policy acts of the insurance company;
- financial reports and annual report on business operations of the insurance company;
- report on performing the policy of coinsurance and reinsurance;
- whether the mathematical reserve was calculated in line with the law;
- transfer of the insurance portfolio;
- whether the solvency margin and guarantee reserves of the insurance company are correctly calculated.

b) Tax advisors
Article 21

The insurant shall be a natural person or auditing company dealing with rendering of consulting services and giving advice referring to regulations that control tax obligations of business companies.

An insured case shall be an event the consequence of which shall be a pure financial loss that was caused to the client by professional error, badly done or inexpert proceeding, i.e. omission of the insurant concerning giving advice, rendering of consulting services and assistance referring to tax, tax obligations of legal and natural persons, participation in carrying out obligations, representation in tax bodies, elaboration of tax return, and on the basis of a written authority.

c) Rendering of accounting services
Article 22

An insurant shall be a natural person – auditor or authorized accountant that possesses a certificate of the Chamber of authorized accountants and auditors, or an auditing company

3/12/18

dealing with offering consulting services and elaboration of financial reports of business companies in line with the Law on accounting and audit of the Republic of Montenegro.

An insured case shall be an event the consequence of which shall be a pure financial loss that was caused to the client by professional error, badly done or inexpert proceeding, i.e. omission of the insurant in performing tasks referring to the:

- Elaboration of the system and methodology of the accounting policy, financial reports, elaboration of financial reports,
- Booking of data through the General ledger,
- Analysis of data shown in reports and in accounting records, drawing of conclusions that give grounds for reaching adequate decisions, preparation and delivery of correct internal and external information in line with the law and basic accounting principles,
- delivery of tax returns to tax bodies, representation at tax bodies.

c) Court experts
Article 23

An insurant shall be a natural person having the title of a court expert dealing with rendering services as an expert of forensic medicine and that is registered in the register of court experts within its specialty.

d) Lawyers
Article 24

This insurance shall cover liability for damage caused to the client of the lawyer, if it occurred from professional lawyer activity of the Insurant, i.e. if the activity is performed in compliance with the Law on legal practice and other positive legal regulations of the Republic of Montenegro.

The client of the lawyer shall be a person to whom the insurant shall offer legal assistance on the basis of a lawyer contract, proxy, authority or another written act. Offering legal help shall mean:
- to give legal advice;
- to write legal suits, complaints, requests, petitions and other petition requests;
- elaboration of contracts, wills, statements and other documents;
- representation and defence of natural and legal persons in courts and other state bodies, companies and other legal entities;
- representation of natural and legal persons in their legal operations by concluding contracts and settlements, receipt and disbursement of money and giving statements and cancellations;
- performance of other jobs concerning legal help on behalf of and for the account of a natural or legal person on the basis of which this person realizes any right.

Intermediaries and representatives in insurance
Article 25

This insurance shall cover liability for the caused damage, if it occurred from professional activity of the insurant, if the activity was carried out in line with the Law on insurance or from possessing things or from the features as sources of peril that are marked in the insurance policy, i.e. in the insurance conditions.

GEORGIOS KARAMITAS 3/72/78 l

Trustees in bankruptcy
Article 26

This insurance shall cover liability for caused damage, if it occurred from the scope of operations of the trustee in bankruptcy, if the operations of the trustee in bankruptcy were performed in line with the law on bankruptcy.

When concluding an insurance agreement, the policy holder or insurant shall be obliged to deliver data to the insurer about legal entities for which the insurant was appointed trustee in bankruptcy.

The scope of operations of the trustee in bankruptcy shall be all jobs defined with the Law on bankruptcy that the insurant shall be obliged to perform on the basis of the Decision of the court on instituting a bankruptcy procedure with which the insurant shall be appointed the trustee in bankruptcy and particularly:

- taking measures in order to protect the bankruptcy debtor's property;
- inventory of property;
- elaboration of the opening balance;
- insurance of property and employment of persons;
- payments to creditors and delivery of the closing balance;
- and performance of other operations from the Law on bankruptcy.

Real estates agents
Article 27

This insurance shall cover liability for the damage caused to the client, if it occurred from professional activity of the insurant, if the activity is performed in line with the law.

The client of the real estates agent shall be a person that participates in the business and that is an ordering party to the intermediary for proceeding and if an intermediary agreement about that exists signed by the seller or purchaser, i.e. one participant in the exchange, lessor or lessee.

Exclusions from insurance
Article 28

This insurance shall not offer protection in cases of:

1) non-observance of the agreed deadlines, if the client of the insurant is responsible for that;
2) exceeding of authorities;
3) compensation due to damage, destruction or losing of money, checks or securities or their consequences;
4) actions of the Insurant as the supervisory, consulting, managing or steering body, director, chief, proxy or employee in a company, union, association, alliance or company of any kind;
5) forecasts of optimization, speculation, terms and similar;
6) financial, pecuniary, credit operations (credits, mortgages) operations referring to securities;
7) violation of the obligation of secrecy;
8) exceeding of cost and loan calculations, as well as loss at loans or capital investments;
9) fraud by the employee of the Insurant or other persons that help, i.e. work for it;
10) for losses that occurred due to lack in the cash box, errors at disbursement or fraud by the employee of the insurant.
11) penalties charged to the insurant due to omission.
12) losses caused by the insurant to its contractual partners by violating contractual provisions with which expand its liability also to cases for which otherwise by law it would not be responsible.

GEORGIOS KANKANIAS PRESIDENT

3/12/18

13) exceeding of authorities that result from the lawyer's contract, authority, proxy or another written act on the basis of which the insurant shall offer legal assistance to the client;
14) losses caused by activities of the actuary for which the take-away of the authorities in line with the Law on Insurance is foreseen;
15) exceeding of authorities;
16) in case when the actuary knew or might have known that there were legal reasons due to which it was obliged to refuse to offer professional services;
17) in case that the lawyer refuses to offer legal assistance by order of the court and there are no legal reasons due to which it is obliged to refuse to offer legal assistance;
18) if the lawyer performs operations in cooperation with pseudo-clerks;
19) demands for compensation that arose after the expiry of 30 days after the resignation of the proxy, and which do not concern cases of denying legal assistance according to the Law on legal procedure;
20) exceeding of authorities from the law on bankruptcy procedure which regulates the scope of operations of the trustee in bankruptcy;
21) in case when the insurant knew or might have known that there were legal reasons due to which it was obliged to refuse the appointment for trustee in bankruptcy;
22) in case that the insurant was appointed the trustee in bankruptcy with the decision of the court and there were legal reasons due to which the insurant cannot or could not be appointed the trustee in bankruptcy;
23) if the loss arose due to activities of the trustee in bankruptcy that was approved by the bankruptcy council or due to proceeding according to the instruction of the bankruptcy judge;
24) if the loss arose due to activities of persons that were employed by the trustee in bankruptcy, except if the loss occurred due to its failure to perform supervision over their work;
25) if the trustee in bankruptcy participates in the bankruptcy procedure in line with the Law on bankruptcy and liquidation of banks and insurance companies;
26) if the trustee in bankruptcy performs operations in cooperation with pseudo-clerks;

III SPECIAL PROVISIONS FOR LIABILITY INSURANCE FOR PRODUCTS
Article 29

Liability risk for the product quality shall be insured in line with the provisions of the Terms and Conditions for liability insurance, general liability insurance conditions and these conditions.

According to these conditions, an insured case shall be a loss that occurs from the product after its delivery due to lacks, about the existence of which the insurant did not know and the consequence of which shall be:
1) bodily injuries, illness or death of a third party,
2) losses in the form of destruction, damage or disappearance of things of third persons,

Products shall be considered to be all material objects or parts of them that appeared from the registered activity of the insurant by observing all legal and technical regulations, as well as regulations on providing quality standards, with the goal to sell these things as goods on the market. According to these conditions, products shall not be intellectual and other services, nor basic agricultural products (products from earth, cattle raising and fishing), including also additional equipment and package.

A product defect shall be an error in: planning, construction, material or manufacture, as well as lacks in the instructions for the correct usage of the product and which may cause bodily injuries, illness or death of the third party, as well as damage, destruction or disappearance of things of third parties. There is a lack when the product does not provide safety that is expected with right, taking into account all circumstances, including also advertising, then the purpose for which it is intended and the time when it was put into circulation. It shall not be considered that the product has a defect just because later a product of higher quality was put into circulation.

GEORGIOS KARKANIAS PRESIDENT 3/12/18

The delivery shall be a real delivery to the third party performed by the insurant, disregarding of the legal grounds of the delivery. The delivery shall be considered to be performed in the moment when the insurant loses the option of disposal, supervision and control over the product, i.e. option to influence the product or its implementation.

According to these conditions, the source of peril shall be the product with defect after its delivery by the insurant;

Temporal insurance validity

Article 30

The insurer shall be liable if the damage occurred in the period of the insurance duration, i.e. not later than in the period of one year from the moment of the insurance end, and the delivery of the product was performed within the insurance duration period.

Expansion of insurance

Article 31

In case of liability insurance for products with defect, the liability of the insurant due to damage caused by integral parts of the product and other elements that were ordered and procured from other persons and which the insurant – producer integrates into products under its name, shall be included, too.

If specially agreed, insurance shall cover also the insurant's liability for damages to third parties that occurred from the final product by building in, connecting, mixing the insurant's product with other products without any lacks.

On the grounds of this expansion, the insurer shall cover the following claims:

a) expenses incurred successively concerning the technical and financially justified repair or amendment of the final product, including also costs of disassembling and removing of the defective product made by the Insurant that was already assembled by the user and expenses of assembling new products in order to replace the previous ones (but excluding procurement and transport costs of the new product), or

b) costs of the user of the final product due to the usage of the defective product, or

c) difference in value if the final product might be sold at a reduced price,

d) expenses incurred by the user concerning the disassembling, assembling and cleaning of machines and technical equipment because of defective products.

Insurance shall cover also damages related to poisoning with salmonella, but not more than up to 20% from the insurance sum, which is stated on the policy.

Exclusions concerning liability insurance for products with defect

Article 32

The insurer shall not compensate for the following:

1. if the product was not delivered to the market or the producer produced or distributed the

GEDIMINAS KARVANIAS PRESIDENT

3/12/18

product outside the frame of its usual business activity,

2. the product was without errors in the moment of elaboration or distribution and the cause of the error occurred later, or if that cause could not be recognized in the moment of elaboration and distribution,
3. the damage was not caused due to lack/defect of the insured part of the product, but it occurred due to the structure or composition of the end/final product composed of that defective part; or the defective/lacking final product might be attributed to the user's manual issued by the producer of the final product.
4. the liability for damages that occurred due to unusual usage of the product or usage of the product for purposes it is not intended for.
5. losses for which it cannot be proved that the product had a lack and that there is no causative connection between the product with defect and suffered damage.
6. losses from products that the insurant has not delivered.
7. losses from a product with lack that probably was not existing at the time when the insurant delivered the product or that lack appeared later.
8. losses from a product that was not intended for sale and delivery by the insurant, or from a product that was not produced within the regular activity.
9. losses due to a product with lack that arose due to the reconciliation of the product's features with the prescribed norms.
10. losses from products with lack, if the level of scientific and technical knowledge when the product was delivered, was not enabling to discover lacks, or the causative connection between the loss and lack of the product.
11. liability of the insurant for losses when the insurant has knowledge about the defect or lack of the product;
12. losses if the producer i.e. insurant should not check the quality of the built-in parts which it buys at others and which it integrates into the products;
13. losses on the produced, i.e. sold/delivered products, as well as on their spare parts;
14. losses that occur from a product that was subsequently processed or adapted;
15. losses that result from a product that was alienated from the producer without its knowledge or that the producer gave somebody as a gift;
16. costs of withdrawing the product from the market (product recall);
17. losses that do not belong either to losses due to the bodily injury or health impairment of a person or to material losses in the form of damage, destruction or disappearance of things – pure financial losses;
18. obligations of compensation for damage on the basis of causative losses as for example work interruption or end of production;
19. Insurance shall not offer compensation for damages that occurred from products the usage of which or effect concerning concrete purposes of use according to corresponding know-how of the technique and science were not sufficiently tried out. In order to consider the product from the previous paragraph sufficiently tried out, it shall be necessary to issue a corresponding permit (attestation) for the product itself and its use on the basis of corresponding legal and administrative regulations.
20. purely financial losses
21. losses that arose concerning aviation products

GEORGIOS KARKANIAS PRESIDENT

3/12/18

Except if not separately agreed, the insurer shall not accept and shall not compensate for:

1. claims caused by wrapping;
2. claims when the insurant or persons working for it set, built-in or fixed that defective product by themselves, or they ordered the product to be set, built-in or fixed by their order and for their account;
3. losses at parts, equipment or devices of motor vehicles, aircrafts or vessels;
4. losses of third parties that arise in the way that with the help of machines delivered (also maintained or fixed) by the insurant, things with defect were produced or processed, without any existence of damage on things in the sense of damage or destruction of material things and their consequences;
5. liability for products that are explosives and/or explosive substances;
6. costs of repair, reconstruction, modification or replacement of the product and/or its part and any financial loss due to necessary mentioned costs.

Changes of insurance conditions and premium tariff

Article 33

These conditions may be changed or amended in the way and by procedure as they were passed, upon prior obtaining of the opinion of an authorized actuary and notifying the Agency for supervision of insurance of Montenegro.

The policy holder shall be informed about the changes and amendments of these Insurance conditions, in compliance with the law.

Implementation of Terms and Conditions for liability insurance and legal regulations

Article 34

Concerning issues that are not regulated with these conditions, the provisions of the Terms and Conditions for liability insurance, i.e. the Law on obligatory relations shall apply.

For issues that are regulated contrary to the provisions of the Terms and Conditions for liability insurance, provisions of these conditions shall apply

III FINAL PROVISIONS

Article 35

These conditions shall take effect as of the adoption date.

On the basis of the Law on Insurance (»Official Gazette of the Republic of Montenegro« no. **078/06** and **19/07**) and the Articles of Incorporation of „UNIQA neživotno osiguranje" a.d. Podgorica, the following business policy act was passed at the meeting of the Management Board held on August 8th 2009:

UNIQA
osiguranje

CONDITIONS
FOR LIABILITY INSURANCE OF THE EMPLOYER

GEORGIOS KARKANIAS
PRESIDENT

3/12/18

I INTRODUCTORY PROVISIONS

Meaning of certain terms

Article 1

Certain terms in these conditions shall have the following meaning:

Insurer – joint stock insurance company with which an insurance agreement shall be concluded, »Uniqa neživotno osiguranje« a.d.;

Proposer – person who wishes to conclude an insurance agreement with the Insurer and for that purpose submits a written Proposal to the Insurer;

Policy holder – person who shall conclude an insurance agreement with the insurer and pay the insurance premium;

Insurant - person whose liability is covered with insurance;

Insurance policy – written document on a concluded insurance agreement;

Insurance premium – amount that shall be paid on the basis of the insurance agreement;

Proposal – written proposal of the Proposer made to the insurer in order to conclude an insurance agreement;

Insurance sum – max. obligation of the insurer per insured case,

Aggregate insurance sum (annual limit) – max. liability of the insurer for all insured cases during the insurance period,

Source of peril – activity (profession), objects (movable and immovable), legal relationship or a certain feature out of which liability may arise as risk covered with this insurance.

Employee – domestic or foreign natural person that is employed with the employer, as well as a person that performs operations on any grounds or is getting trained for work with the employer except of a person that is employed at the employer in order to perform operations of a support staff.

Implementation of conditions

Article 2

These conditions shall apply with the Terms and conditions for liability insurance.

II GENERAL PROVISIONS

Subject of insurance

Article 3

The subject of these conditions shall be the civil and legal liability of the insurant – employer for the damage caused due to death, injury of body or health, i.e. damage or destruction of the employees' objects, caused by a sudden and unexpected loss event in the business premises of

GEORGIOS KARAMANIAS PRESIDENT

3/12/18

the employer, i.e. on places where operations from the activity of the employer – insurant are being performed.

This insurance shall cover liability of the insurant – employer for the caused damage if it occurred or from the registered activity of the insurant or from possessing things or from the feature as the source of peril that are marked in the insurance policy.

The insured source of peril mentioned on the policy shall comprise also the liability of the insurant against the utilization, i.e. possessing, rent or usufruct of land, objects and premises that are exclusively used for the needs of the insured activity or profession.

The insurance shall comprise also liability of the insurant for damages suffered by persons that perform work on any grounds or are getting trained for work with the employer, except of persons that are employed at the employer in order to perform operations of supporting staff,

a) whether when performing operations or trainings in the business premises of the Insurant,

b) or outside the premises of the Insurant during work which is done by order or in interest of the Insurant.

Insured case

Article 4

It shall be considered that the insured case arose on that moment when the loss event suffered by the employee, on the basis of which a request for the compensation from insurance against the insurant – employer might arise and on the basis of the civil and legal liability in accordance with article 3 hereof started being effective.

Several loss events that arose due to the same cause or from identical timely connected causes shall be considered to be one insured case – serial damages.

In case of serial damage, the moment when the first claim occurred shall be considered to be the moment of occurrence of it and in regard to this moment the volume of the agreed insurance cover for the whole claim in a row shall be determined.

Timely validity of the insurance

Article 5

The insurer shall be obliged only then when the insurance case should occur during the insurance validity.

The insured case that occurred during the insurance validity and the cause of which from the period that precedes the conclusion of the insurance agreement or from the time when the insurance was interrupted, shall be covered with insurance only then when the policy holder or insurant were not familiar and could not be familiar with the cause from which the insured case originates, up to the beginning of insurance or repeated start of insurance.

Concerning damages due to the injury of health that occur gradually, in case of doubt, it shall be considered that the loss event occurred then when for the first time with the finding of the physician the injury of health was determined.

The deadline for submitting a request for compensation for damage of a third damaged person, i.e. insurant on the basis of right from insurance by the policy concluded in line with these conditions shall be the deadline determined with the Law on obligatory relations.

GEORGIOS KARKANIAS
PRESIDENT

3/12/18

Insurance against new sources of peril

Article 6

If specially agreed, the cover from insurance shall be expanded also to liability from new sources of peril that shall appear at the insurant after concluding the insurance agreement, if no special insurance for that new arising source of peril was concluded.

Immediately after the appearance of a new source of peril the insurant shall be obliged to inform the insurer in writing about the appearance of a new source of peril.

The insurer shall be obliged to inform the insurant about the acceptance into cover of new sources of peril within 8 (eight) days and on the grounds of a written information from the previous paragraph. If the insurer should not respond within eight days, it shall be considered that the new source of peril was included in insurance if the mentioned new source of peril should be in line with the valid insurance conditions and premium tariff.

The insurer shall keep the right of calculating additional premium for the cover of new sources of peril from the previous paragraphs hereof, as well as the right of not accepting new sources of peril and it shall inform the insurer in written form about that within the deadline mentioned in the previous paragraph.

The insurance sum that was agreed on the policy also for previously insured sources of peril shall be valid for new sources of peril. If the policy should contain various insurance sums for some sources of peril, the insurance sum agreed for a certain source of peril shall be valid for it, which shall be determined with the annex to the insurance agreement.

Insurance sum

Article 7

The insurance sum shall be agreed in a fixed pecuniary amount and it shall represent the max. liability of the insurer per one insured case from article 4 hereof disregarding of the number of damaged persons and persons the liability of which is covered with insurance, if not otherwise agreed.

The insurance sum from the previous paragraph refers to cases of death, injury of body or health, damages or destruction of objects of third persons.

The total liability of the insurer for all insured cases that occurred in one insurance year, may not exceed the amount of 5 (five) agreed insurance sums from paragraph 1 hereof.

The total annual insurance sum shall be decreased with the payment of each single compensation. After the exhaustion of the total annual insurance sum, the insurance shall cease to be valid.

Article 8

The payment of insured sums on the basis of life insurance agreement of the employee, i.e. insurance agreement of the employee against the consequences of an accident, concluded by the insurant shall not be included into the amount of compensation from liability insurance of the insurant that the insurer shall be obliged to pay out to the submitter of the claim request.

The upper limit of the insurer's liability as well as the deductible amount shall be defined with the insurance agreement.

GEORGIOS KARKANIAS PRESIDENT

3/12/18

Insurance validity by territory

Article 9

Regarding the territorial validity of the insurance, the provisions of the Terms and conditions for liability insurance shall apply.

Exclusions from insurance

Article 10

Along with general exclusions defined with the Terms and conditions for liability insurance, the insurance concluded according to these conditions shall not cover the following claims:

1) claims by loss event if the insurant should cause them by intent or gross negligence. According to these conditions, intent or gross negligence shall be considered to be:

   - if the insurant should not conclude a settlement with the employee and it comes out from the factual status that with denial of settlement obvious injustice would be done,
   - If the insurant was informed about the lacks of material, raw materials and products as well as means for work,
   - settlement concluded with intent contrary to the valid regulations,
   - giving orders to the employee for performing operations contrary to internal acts of the employer,
   - giving orders to the employee to perform activities referring to the work contrary to regulations on safety and health at work

2) claims in regard to professional illnesses or injuries at work that occurred besides all the measures of the employer in order to protect the employees,

3) claims for which the insurant shall be responsible as handling the vehicle and which are covered with obligatory insurance against liability of the motor vehicle user (MTPL), excluding claims that occur during the repair or maintenance of the vehicle that are being qualified as accidents regarding work,

4) pure financial claims,

5) claims suffered by employees on the way to and from the place of work as the consequence of an accident except if the accident should occur during the travel by means of transportation owned by the insurant or rented by the insurant.

6) the insurer shall not cover liability for a damage due to participation on horse, bicycle, motorcycle and car races, boxing and wrestling fights as well as participation on preparations for a race, i.e. a fight (training) that shall be organized by the insurant for its employees

7) Claim requests for compensation for damages:
   - On products sold by the insurant as well as damages caused by deficiency of a product or deficiency of the performed work after the transfer (product liability),
   - On employees' objects that do not belong into personal staff of the employee which are necessary or usual for performing work with the employer.
   - claims on transportation means owned by the employee shall not be compensated,
   - Because of the use of unattested working tools and auxiliary means for work,
   - Recourse requests of social insurance funds, pension and disability insurance funds as well as other funds that pay out compensations on the grounds of paid in contributions shall be excluded from insurance.
   - environmental damages
   - permanent temperature effects, gases, steam, humidity or precipitation (smoke, dust, soot) that caused damages gradually.

GEORGIOS KARKANIAS
PRESIDENT

3/12/18

Changes of insurance conditions and Premium tariffs

Article 11

In the event of changed conditions and tariffs, the Insurer is obligated to inform policy holder in writing or in another suitable way at latest within 30 days before the expiration of current year of insurance. Policy holder may cancel the agreement within 30 days of receiving notice. In this case the agreement shall cease by expiration of the current year of insurance.

If the policy holder does not cancel the agreements as defined in previous paragraph, amended agreement shall be applied to the beginning of the next period of insurance.

Implementation of Terms and conditions for liability insurance and legal regulations

Article 12

For issues that are not regulated with these conditions, provisions of the Terms and conditions for liability insurance, i.e. the Law on obligatory relations shall apply.

For issues regulated contrary to the provisions of the Terms and conditions for liability insurance, the provisions of these conditions shall apply.

Jurisdiction in case of dispute

Article 13

In case of dispute between the policy holder – insurant and insurer, the venue shall be the insurer's domicile.

II FINAL PROVISIONS

Article 14

These conditions may be changed or amended in the way and by procedure according to which they were passed, with the prior obtaining of opinion of the authorized actuary and by informing the Agency for supervision of the insurance of Republic of Montenegro.

The policy holder shall be informed about the changes and amendments of these insurance conditions, in compliance with the law.

These conditions shall take effect as of adoption date

Rating Action: Moody's affirms Greek banks' deposit ratings at Caa3; upgrades large banks' senior debt ratings and baseline credit assessment

Global Credit Research - 26 Jun 2017

Rating actions follow Greece's upgrade to Caa2 (positive)

Limassol, June 26, 2017 -- Moody's Investors Service (Moody's) has today affirmed the Caa3 long-term deposit ratings of Alpha Bank AE, Eurobank Ergasias S.A., National Bank of Greece S.A., and Piraeus Bank S.A.. At the same time, Moody's has also upgraded all four banks' baseline credit assessment (BCA) to caa2 from caa3, the long-term senior unsecured ratings to (P)Caa3 from (P)Ca, and the long-term counterparty risk assessment to Caa2(cr) from Caa3(cr). The long-term deposit ratings for Alpha Bank AE and National Bank of Greece S.A. carry positive outlooks, while those of Eurobank Ergasias S.A. and Piraeus Bank S.A. carry stable outlooks. The long-term deposit ratings of Attica Bank S.A. were affirmed at Caa3 with stable outlook, as well as its BCA of caa3, while the bank's counterparty risk assessment was upgraded to Caa2(cr) from Caa3(cr).

These rating actions follow the successful completion of Greece's second review for its support programme, which also triggered an upgrade of Greece's government bond rating to Caa2 (positive) from Caa3 (stable). The higher BCAs primarily reflect the improved operating environment in Greece, which has resulted in Moody's raising the country's Macro Profile to 'Very Weak+' from 'Very Weak', as well as improvements in banks' funding profile, lower funding costs, the return to marginal core profitability and the likely continuation of this trend in 2017-18. In addition, the BCAs also take into account the prospects for further modest improvements in banks' financial fundamentals stemming from the potential return of more deposits into the banking system and gradual reduction of nonperforming loans, as the economy starts to show signs of recovery.

The affirmation of the banks' Caa3 deposit ratings is primarily driven by the rating agency's 'Loss Given Failure' (LGF) analysis of banks' liability structure and the relatively small pool of unsecured liabilities available to absorb losses in a potential bank resolution scenario. The deposit ratings also reflect the on-going deposit controls in Greece, and the fact that depositors do not have instant access to the full amount of their deposits. The banks' senior unsecured ratings were upgraded to (P)Caa3 from (P)Ca based on the full application of the rating agency's LGF analytical approach following the stabilisation of banks' liability structures. Previously these debt ratings were benchmarked at Ca based on expected losses, following the liability management exercises and exchange offers to senior bondholders that banks carried out in late 2015, as part of their last recapitalisation.

Moody's said that its Greek bank ratings balance the improvements in their credit profiles against the still significant downside risks stemming from the fragile operating environment in Greece and the very high level of nonperforming loans.

A full list of affected ratings is provided at the end of this press release.

RATINGS RATIONALE

UPGRADES OF BCAs TO caa2 FROM caa3

The upgrade of the four Greek banks' BCAs to caa2 from caa3 reflects the following factors:

-- GREECE'S MACRO PROFILE CHANGED TO 'VERY WEAK+' FROM 'VERY WEAK'

Following the sovereign rating upgrade, the macro profile for Greece that is used in Moody's banking scorecards that derive the BCAs has been changed to 'Very Weak+' from 'Very Weak', due to the rating agency's improved view of the country's institutional strength factor. This was primarily triggered by the conclusion of the second review of the country's adjustment programme, and the fact that public institutions in Greece have benefited from the technical assistance provided by the official creditors. Greece's macro profile also reflects the difficult credit and funding conditions, with structural challenges faced by all banks.

-- IMPROVED FUNDING PROFILES

The BCA upgrades also reflect the recent improvements in their funding profiles with the reduction of the high cost Emergency Liquidity Assistance (ELA), which was around €41 billion for the system in May 2017, down from €87 billion in June 2015. Moody's expects further reduction in the banks' dependence on ELA, following the conclusion of the second review of the country's support programme by its official lenders (EC/ECB/ESM/IMF). This development should improve confidence in the banks, resulting in gradual deposit inflows from the approximately €10 billion of cash still placed outside the banking system. The rating agency also expects a gradual relaxation of the capital controls that remain in place in Greece, which allow depositors to withdraw only €840 every two weeks. Full repayment of the ELA is one of Greek banks' top priorities, although this is unlikely to materialise for all four banks over the next 12-18 months. The inter-bank repo market has been available to Greek banks so far, allowing them to partly reduce their ELA balances.

-- BETTER PROFITABILITY PROSPECTS

The BCA upgrades also consider the improved earnings prospects for these banks, following the conclusion of the second review, which will likely enhance investor and depositor confidence, reducing funding costs. Concurrently, Moody's expects that lower funding costs and operating expenses will support pre-provision income in 2017-18, and bottom-line profits will be largely driven by the level of provisioning requirements. During 2016, pre-provision income for the banking system increased by around 32% with almost all banks being marginally profitable, limiting any capital consumption, while the first quarter 2017 results suggest that the improving trend will continue in 2017.

Moody's considers that the BCA of caa2 for all four banks appropriately balances these recent improvements in their standalone credit profiles as well as the considerable downside risks stemming from the still high level of non-performing exposures (NPEs) that were at around 45% of total exposures (including off-balance sheet items) as of March 2017. The rating agency believes that over the next 12-18 months, banks' performance will depend on their ability to reduce the level of NPEs mainly through restructurings that will also generate additional income.

ATTICA BANK BCA AFFIRMED AT caa3

Attica Bank's BCA was affirmed at caa3 reflecting the bank's significant asset quality challenges, with the highest NPE ratio among its peers, as well as its ongoing capital needs that have yet to be fully covered. In addition, the bank is currently undergoing restructuring and has yet to show concrete evidence that it has the capacity to return to sustainable profitability. The rating agency believes that the standalone credit profile of Attica Bank is weaker than its local peers, as reflected by the lower BCA. Moody's said that the higher sovereign rating now allows certain rating differentiation among Greek banks, while prior to this rating action all Greek banks were rated at the same level towards the end of the rating scale. For more details on Attica Bank, please see individual bank section below.

03/12/18

The affirmation of the banks' Caa3 deposit ratings primarily reflects banks' relatively small pool of unsecured obligations and minima subordinated liabilities available to absorb potential losses in case of a bank resolution scenario. Accordingly, depositors remain vulnerable to bail-in risks within the context of the Bank Recovery and Resolution Directive (BRRD) transposition law that was passed in Greece in 2015. Although Greek depositors were excluded from bail-in in the last few years, Moody's considers that the relative risks are still high and thus positions long-term deposits, senior unsecured debt and subordinated debt at the same rating level of Caa3 based on the rating agency's LGF analysis of banks' liability structure.

The long-term deposit ratings of Caa3 also take into consideration the on-going capital controls in place as well as the implied losses faced by depositors that do not have instant access to the full amount of their funds. All banks' Caa3 deposit ratings are positioned one notch lower than the recently revised local-currency deposit ceiling for Greece of Caa2.

The change in the deposit rating outlook to positive from stable for Alpha Bank and National Bank of Greece reflects the rating agency's opinion of these banks' marginally stronger standalone credit profiles than their peers, and its expectation that going forward their liability structure through more deposits could induce a higher deposit rating. Alpha Bank has a stronger tangible capital position than its peers, while National Bank of Greece has a better funding profile with lower ELA dependence than the other banks. The individual bank sections below provide more details in this respect.

SENIOR AND SUBORDINATED RATINGS UPGRADED TO (P)Caa3 from (P)Ca AND C RESPECTIVELY; JUNIOR INSTRUMENTS AFFIRMED AT C(hyb)

The upgrade of the four banks' senior debt ratings to (P)Caa3 from (P)Ca and subordinated debt ratings to (P)Caa3 from (P)C reflect Moody's loss given failure (LGF) analysis of their liability structure, which indicates that such obligations should be placed at the same level as deposits. This is driven by the relatively thin cushion that banks have on their balance sheets to absorb losses in a potential bank resolution scenario. The rating agency notes that a large proportion of Greek banks' liabilities are in the form secured obligations, either through the ELA mechanism, or the ECB or the inter-bank repo market, limiting the pool of creditors available to absorb losses.

Prior to this rating action, Moody's positioned the ratings of these debt instruments based on an expected loss basis, as part of banks' liability management exercises and voluntary exchange offers towards investors in late 2015, when banks were carrying out their third round of recapitalization over the last few years. The senior debt ratings outlook is positive for Alpha Bank and National Bank of Greece, and stable for Piraeus Bank and Eurobank.

At the same time, Moody's affirmed the C(hyb) ratings assigned to the two systemic banks' non-cumulative Tier 1 preferred stock. These affirmations were driven by these instruments' structural subordination to senior and subordinated debt, and the higher likelihood that they could sustain significant losses before any senior and subordinated debt holders are affected in a potential bank resolution scenario.

INDIVIDUAL BANKS

— ALPHA BANK

Alpha Bank's BCA upgrade to caa2 from caa3 and its positive rating outlook take into account its relatively high pro-forma common equity Tier 1 (CET1) ratio of 17.3% in March 2017, following the recent sale of its operations in Serbia. Moody's notes that Alpha Bank has the lowest level of eligible deferred tax assets (DTAs) on its balance sheet at around €3.4 billion in March 2017, which comprised around 38% of its nominal CET1 capital. This level positions the bank at the stronger end in terms of loss-absorbing tangible capital available among its local systemic peers, underpinning Alpha Bank's positive rating outlook. Moody's considers such DTAs as a weak form of capital, in view of Greece's low rating.

The bank's ratings also consider its return to positive profitability with a net profit of around €46 million for the first three-months of 2017 while its nonperforming loans (NPL) and nonperforming exposures (NPE) ratio stood at around 38% and 54% respectively as of March 2017. NPL and NPE provisioning coverage was around 60% and 49%, respectively. Moody's believes that the relatively high NPL provisioning coverage provides the bank with more flexibility to actively manage its NPL portfolio. The bank's ELA as of March 2017 stood at €12.2 billion (down from €19.8 billion in December 2015, comprising 19% of its total assets, although Moody's expects this type of funding to reduce further in 2017-18.

— ATTICA BANK

The affirmation of Attica Bank's BCA at caa3 takes into consideration its CET1 ratio of 14.8% at December 2016, but also the fact that this is still short of around €85 million that the bank needs to raise in order to be fully compliant with the Bank of Greece's adverse scenario capital estimate. Moody's understands that the bank has agreed with a potential investor aiming to cover this capital shortfall through a deal that will also involve the management of a pool of NPEs.

The bank, which is the smallest among all rated Greek banks with a market share of only around 2%, reported losses of around €50 million in 2016, as its NPE ratio increased to 61% in December 2016, from 56% in December 2015, which is the highest among local peers. The bank's ELA dependence was around €1 billion as of December 2016, comprising around 28% of its total assets. The rating agency expects that on-going restructuring at the bank, by the new top management is likely to start yielding results in 2017-18, although Attica Bank's performance is likely to still lag behind its peers.

— EUROBANK ERGASIAS

Eurobank's BCA of caa2 takes into account its reported CET1 ratio of 17.3% in March 2017, up from 16.5% in March 2016. Nonetheless, Moody's considers the bank to have a lower quality of capital than its peers, in view of its eligible DTAs (€4 billion) and the state preference shares of around €950 million that the bank retains on its balance sheet and will need to repay at some stage. The rating agency estimates that around 75% of the bank's nominal CET1 capital is in the form of either eligible DTAs or preference shares, leaving minimal loss-absorbing tangible common equity available.

The bank's profit in the first three months of 2017 amounted to around €37 million, while its NPL and NPE ratio were at around 35% and 45%, respectively, as of March 2017. Eurobank's NPL and NPE provisioning coverage was around 66% and 51%, respectively. The bank's ELA as of March 2017 stood at €12.2 billion, comprising around 19% of its total assets, although Moody's notes that the bank was able to reduce this ELA dependence significantly from €22.9 billion in June 2015.

— NATIONAL BANK OF GREECE

The bank's BCA upgrade to caa2 from caa3 and its positive rating outlook takes into consideration its strong savings franchise in Greece, and its ELA balance that was the lowest among its peers at €5.6 billion, comprising 7.4% of its total assets as of March 2017. Moody's expects NBG to be the first bank in Greece to fully repay its ELA in the next 12-18 months, mainly through the sale of its foreign subsidiaries and its insurance arm and through more customer deposits.

National Bank of Greece (NBG) had a pro-forma CET1 ratio, incorporating the recent sale of its Bulgarian operations, of 17% in March 2017 from 16.3% in December 2016. However, this healthy regulatory ratio is undermined by the bank's high eligible DTAs (€4.8 billion), which comprised around 73% of its nominal CET1 capital as of March 2017. NBG is likely to further enhance its CET1 capital through the sale of more non-core assets going forward.

The bank's NPL and NPE ratios in Greece stood at 33% and 44%, respectively, as of March 2017, while the NPL and NPE provisioning coverage was 75% and 57%, the highest within its local peer group. The rating agency believes that recoveries from the NPL portfolio could further enhance the bank's core pre-provision income, which increased by 30% year-on-year in the first three-months of 2017, combined with further reduction in its operating expenses.

GEORGIOS KARKANIAS
PRESIDENT

— PIRAEUS BANK

Piraeus Bank's BCA of caa2 considers its increased CET1 ratio to 16.8% in March 2017 from 11.2% in September 2015, including the €2 billion CoCos that the bank still retains but will have to repay back to the state-owned Hellenic Financial Stability Fund (HFSF) at some stage. The bank's eligible DTAs (€4.1 billion) comprised around 60% of its nominal CET1 capital, excluding its CoCos, undermining the quality of its capital position.

Moody's considers Piraeus Bank's asset quality position to be among the weakest in the system due to its numerous take-overs of smaller problematic banks in the last few years, which resulted in an NPL and NPE ratio of around 38% and 55%, respectively, as of March 2017. In addition, the bank's NPL and NPE provisioning coverage was at 68% and 48%, respectively. However, the rating agency expects the bank's

03/12/18

asset quality to gradually improve in view of its focus and active management of its NPLs, and the additional tools provided to the banks for managing their NPLs through recent legislative measures. The bank reported a net loss of around €6 million during the first three-months of 2017, although Moody's positively views the bank's ability to increase its pre-provision income by 11% year-on-year.

WHAT COULD MOVE THE RATINGS UP/DOWN

Over time, upward deposit and senior debt rating pressure could arise following a stabilisation of the country's macro-economic environment, combined with an improvement in banks' asset quality, profitability and funding. The return of more deposits back to the banking system would also increase the pool of unsecured obligations available to banks, which could trigger a deposit and senior debt rating upgrade driven by the rating agency's LGF approach.

Greek banks' deposit and senior debt ratings could be downgraded in the event of political turmoil in the country for an extended period of time that substantially affects domestic consumption and economic activity, which have gradually been recovering from a very low base.

The principal methodology used in these ratings was Banks published in January 2016. Please see the Rating Methodologies page on www.moodys.com for a copy of this methodology.

REGULATORY DISCLOSURES

For ratings issued on a program, series or category/class of debt, this announcement provides certain regulatory disclosures in relation to each rating of a subsequently issued bond or note of the same series or category/class of debt or pursuant to a program for which the ratings are derived exclusively from existing ratings in accordance with Moody's rating practices. For ratings issued on a support provider, this announcement provides certain regulatory disclosures in relation to the credit rating action on the support provider and in relation to each particular credit rating action for securities that derive their credit ratings from the support provider's credit rating. For provisional ratings, this announcement provides certain regulatory disclosures in relation to the provisional rating assigned, and in relation to a definitive rating that may be assigned subsequent to the final issuance of the debt, in each case where the transaction structure and terms have not changed prior to the assignment of the definitive rating in a manner that would have affected the rating. For further information please see the ratings tab on the issuer/entity page for the respective issuer on www.moodys.com.

For any affected securities or rated entities receiving direct credit support from the primary entity(ies) of this credit rating action, and whose ratings may change as a result of this credit rating action, the associated regulatory disclosures will be those of the guarantor entity. Exceptions to this approach exist for the following disclosures, if applicable to jurisdiction: Ancillary Services, Disclosure to rated entity, Disclosure from rated entity.

Regulatory disclosures contained in this press release apply to the credit rating and, if applicable, the related rating outlook or rating review.

Please see www.moodys.com for any updates on changes to the lead rating analyst and to the Moody's legal entity that has issued the rating.

Please see the ratings tab on the issuer/entity page on www.moodys.com for additional regulatory disclosures for each credit rating.

To the extent permitted by law, MOODY'S and its directors, officers, employees, agents, representatives, licensors and suppliers disclaim liability to any person or entity for any indirect, special, consequential, or incidental losses or damages whatsoever arising from or in connection with the information contained herein or the use of or inability to use any such information, even if MOODY'S or any of its directors, officers, employees, agents, representatives, licensors or suppliers is advised in advance of the possibility of such losses or damages, including but not limited to: (1) any loss of present or prospective profits or (2) any loss or damage arising where the relevant financial instrument is not the subject of a particular credit rating assigned by MOODY'S.

To the extent permitted by law, MOODY'S and its directors, officers, employees, agents, representatives, licensors and suppliers disclaim liability for any direct or compensatory losses or damages caused to any person or entity, including but not limited to by any negligence (but excluding fraud, willful misconduct or any other type of liability that, for the avoidance of doubt, by law cannot be excluded) on the part of, or any contingency within or beyond the control of, MOODY'S or any of its directors, officers, employees, agents, representatives, licensors or suppliers, arising from or in connection with the information contained herein or the use of or inability to use any such information.

NO WARRANTY EXPRESS OR IMPLIED, AS TO THE ACCURACY, TIMELINESS, COMPLETENESS, MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OF ANY SUCH RATING OR OTHER OPINION OR INFORMATION IS GIVEN OR MADE BY MOODY'S IN ANY FORM OR MANNER WHATSOEVER.

Moody's Investors Service, Inc., a wholly-owned credit rating agency subsidiary of Moody's Corporation ("MCO"), hereby discloses that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by Moody's Investors Service, Inc. have, prior to assignment of any rating, agreed to pay to Moody's Investors Service, Inc. for appraisal and rating services rendered by it fees ranging from $1,500 to approximately $2,500,000. MCO and its subsidiaries have also maintained policies and procedures to address the independence of MIS's ratings and rating processes. Information regarding certain affiliations that may exist between directors of MCO and rated entities, and between entities who hold ratings from MIS and have also publicly reported to the SEC an ownership interest in MCO of more than 5%, is posted annually at www.moodys.com under the heading "Investor Relations — Corporate Governance — Director and Shareholder Affiliation Policy."

Additional terms for Australia only: Any publication into Australia of this document is pursuant to the Australian Financial Services License of MOODY'S affiliate, Moody's Investors Service Pty Limited ABN 61 003 399 657AFSL 336969 and/or Moody's Analytics Australia Pty Ltd ABN 94 105 136 972 AFSL 383569 (as applicable). This document is intended to be provided only to "wholesale clients" within the meaning of section 761G of the Corporations Act 2001. By continuing to access this document from within Australia, you represent to MOODY'S that you are, or are accessing the document as a representative of, a "wholesale client" and that neither you nor the entity you represent will directly or indirectly disseminate this document or its contents to "retail clients" within the meaning of section 761G of the Corporations Act 2001. MOODY'S credit rating is an opinion as to the creditworthiness of a debt obligation of the issuer, not on the equity securities of the issuer or any form of security that is available to retail investors. It would be reckless and inappropriate for retail investors to use MOODY'S credit ratings or publications when making an investment decision. If in doubt you should contact your financial or other professional adviser.

Additional terms for Japan only: Moody's Japan K.K. ("MJKK") is a wholly-owned credit rating agency subsidiary of Moody's Group Japan G.K., which is wholly-owned by Moody's Overseas Holdings Inc., a wholly-owned subsidiary of MCO. Moody's Japan K.K. ("MSFJ") is a wholly-owned credit rating agency subsidiary of MJKK. MSFJ is not a Nationally Recognized Statistical Rating Organization ("NRSRO"). Therefore, credit ratings assigned by MSFJ are Non-NRSRO Credit Ratings. Non-NRSRO Credit Ratings are assigned by an entity that is not a NRSRO and, consequently, the rated obligation will not qualify for certain types of treatment under U.S. laws. MJKK and MSFJ are credit rating agencies registered with the Japan Financial Services Agency, and their registration numbers are FSA Commissioner (Ratings) No. 2 and 3 respectively.

MJKK or MSFJ (as applicable) hereby discloses that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by MJKK or MSFJ (as applicable) have, prior to assignment of any rating, agreed to pay to MJKK or MSFJ (as applicable) for appraisal and rating services rendered by it fees ranging from JPY200,000 to approximately JPY350,000,000.

MJKK and MSFJ also maintain policies and procedures to address Japanese regulatory requirements.

For credit ratings that are derived exclusively from an existing credit rating of a program, series, category/class of debt, support provider or primary rated entity, or that replace a previously assigned provisional rating at the same rating level, Moody's publishes a rating announcement on that series, category/class of debt or program as a whole, on the support provider or primary rated entity, or on the provisional rating, but often does not publish a specific rating announcement on each subsequent bond or note for which the credit rating is derived from the existing credit rating. Rating announcements are usually press releases classified as Rating Actions on www.moodys.com. Please refer to the Research tab on the issuer/entity page for the rating announcement.

For credit ratings that are derived exclusively from an existing credit rating of a program, series, category/class of debt, support provider or primary rated entity, or that replace a previously assigned provisional rating at the same rating level, Moody's publishes a rating announcement on that series, category/class of debt or program as a whole, on the support provider or primary rated entity, or on the provisional rating, but often does not publish a specific rating announcement on each subsequent bond or note for which the credit rating is derived from the existing credit rating. Rating announcements are usually press releases classified as Rating Actions on www.moodys.com. Please refer to the Research tab on the issuer/entity page for the rating announcement.

1. GENERAL INFORMATION

1.1 Basic information on the construction

The purpose of the "Danilovgrad Municipal Infrastructure Project, Construction of WWTP" project is to deal with the treatment of sewage through the construction of a new wastewater treatment plant.

This project is to be followed by the "Danilovgrad Municipal Infrastructure Project, Rehabilitation of sewerage" project dealing with the collection of sewage wastewaters in the town of Danilovgrad through the construction of a separate sanitary sewerage.

The main watercourse draining the Danilovgrad area is the Zeta river.

The implementation of the projects will ensure an improved water quality in the Zeta river into which wastewaters are drained at present without any adequate treatment process. The wastewater will be brought into the new WWTP. The projects concept is based on the intention to protect the watercourse maximally from being polluted.

The designed activity realization will form conditions for the infrastructure completion and will promote the development of the area concerned.

1.2 Proposed scope of works and expected results

The Contractor elaborates the documentation of the WWTP for the capacity of 12,000 PE with construction divided into two stages, and will realize the WWTP for the capacity of 6,000 PE with individual structures realized in a scope specified in relevant descriptions of these structures.

1.2.1 Wastewater Production

The existing sewerage system will be partially replaced by sewers built as separate sewage system. Wastewater treatment plant is proposed for following capacity:

Stage 1 - design capacity	6 000 population equivalent
Stage 2 - distant future	12 000 population equivalent

A vast majority of the wastewater collected from Danilovgrad is formed by sewage water, produced mainly in households.

GEORGIOS KARKANIAS
PRESIDENT

3/12/18

1.2.1.1 Wastewater Volume

The determination of the volume of wastewater is based on the expected wastewater production of 150 L/capita.day. The wastewater flow rates, specified by the client, include groundwater inflow/infiltration. Design parameters is found in the following table:

Table 1: Wastewater Production

	Design capacity		
	l/s	m^3/h	m^3/d
Average Dry Weather Daily Flow - ADF	10.4	37.4	898.6
Maximum Dry Weather Daily Flow - MDF	14.6	52.6	1,261.4
Maximum Dry Weather Hourly Flow - MHF	21.9	78.8	-
Wet Weather Flow - WWF	26.3	94.6	-

All the design flow will be doubled for WWTP capacity of 12,000 PE.

Internal recycles will be less than 1% of WWF.

1.2.1.2 Raw Wastewater Quality

The wastewater produced in the town of Danilovgrad has the characteristics of sewage water. The specification of its quality is therefore based on the Specific Contamination (SC), produced by the town's inhabitants, as summarized in Table 2.

Table 2: Specific pollution per capita

BOD_5	60	g/capita.day
COD	120	g/capita.day
SS	70	g/capita.day
TNK	11	g/capita.day
P	1.8	g/capita.day

Table 3: Design capacity - average annual value

BOD_5	360	kg/day	400.6	mg/l
COD	720	kg/day	801.3	mg/l
SS	420	kg/day	467.4	mg/l
TNK	66	kg/day	73.5	mg/l
P	10.8	kg/day	12.0	mg/l

All the design balance of pollution will be doubled for WWTP capacity of 12,000 PE.

3/12/18
GEORGIOS KARKANIAS
PRESIDENT

At the time of startup of WWTP will be connected pollution from about 3,900 inhabitants. The amount of pollution and wastewater flow will be as follows (the amount of storm water flow is not changed).

Table 4: Wastewater production- state at start up

	l/s	m^3/h	m^3/d
Average Dry Weather Daily Flow - ADF	6.8	24.3	584.1
Maximum Dry Weather Daily Flow - MDF	9.5	34.2	819.9
Maximum Dry Weather Hourly Flow - MHF	14.2	51.2	-
Wet Weather Flow - WWF	26.3	94.6	-

Expected minimum flow of waste water during startup will be about 4.1 l/s.

Table 5: Raw wastewater pollution - state at start up

BOD_5	234	kg/day	400.6	mg/l
COD	468	kg/day	801.3	mg/l
SS	273	kg/day	467.4	mg/l
TNK	42.9	kg/day	73.5	mg/l
P	7.02	kg/day	12.0	mg/l

1.2.1.3 Treated Wastewater Quality

River Zeta is recipient of treated wastewater. The river is located in sensitive area. Wastewater treatment process includes nutrient removal therefore. According the Law on Classification and Categoration of Surface and Ground water of Montenegro (in force since 1996) river Zeta water is classified along whole watercourse to the classes A1. S. I. Class A1 water can be used in its' natural state after disinfection for drinking purposes. class S water can be used for fish breeding and class I designate water suitable for contact recreation (bathing). In line with EU Directives secondary and tertiary treatment at WWTP Danilovgrad will achieve the following effluent quality:

Table 6: Effluent quality requirements

Parameter		
BOD_5	25	mg/l
COD	125	mg/l
SS	35	mg/l
Total Nitrogen (annual average value)	15	mg/l
Total Phosphorous (annual average value)	2	mg/l

UV disinfection of effluent is required in order to ensure the quality of receiving water (Zeta River) as a drinking water class A1.

GEORGIOS KARKANIAS
S.I.D.E.P.A.T.

3/12/8

2. DETAILS OF ALL WORKS TO ACHIEVE COMPLETION

2.1 Technological part

The Works will comprise designing, construction and commissioning of the WWTP Danilovgrad, tertiary treatment and sludge management. The WWTP Danilovgrad is designed for a capacity of 12000 PE and shall be built for 6,000PE in the Stage 1.

The design of the WWTP spatial arrangement had taken into consideration the territorial (areal) reserve for the future extension of the WWTP for the capacity of 18,000 PE (Stage 3).

The WWTP is designed as unattended with fully automatic operation.

List of buildings and facilities - for the design and erection of all necessary works

- Connection on the inlet main collector for the capacity of 130 l/s on the site of the WWTP
- Facility for the coarse screen for the capacity of 130 l/s,
- Facility for the inlet pumping station for the capacity of min26,3 l/s,
- Facility for the fine screen, grease and grit chamber (compact mechanical pretreatment unit) for the capacity of min26,3 l/s,
- Connection between the compact mechanical pretreatment unit and the biological unit for capacity of min26,3 l/s,
- Biological unit for the capacity of 6,000 PE,
- Discharge pipeline from the secondary settling tank to the filtration unit for the capacity of min26,3 l/s
- Shaft and facility for the service water preparation
- Filtration of treated wastewater
- Disinfection of treated wastewater
- Effluent measuring channel for the quality of treated wastewater and capacity of min26,3 l/s
- Return sludge and Excess sludge pumping station for 6,000 PE,
- Facility for sludge thickening for 6,000 PE,
- Sludge storage (holding) tank for 6,000 PE,
- Facility for sludge dewatering for 6,000 PE,
- Facility for septic sludge (septage) delivered by trucks, receiving tank
- Administration building with laboratory, workshop and garage,
- Internal sewage system with sewage and internal recycles from sludge treatment,

3/12/18
GEORGIOS KARKANIAS
PRESIDENT

- Rainwater will be introduced into the drainage
- Transformer station for the WWTP capacity 12,000 PE,
- Power generator for 6,000 PE.

- Landscaping works
- Access road
- Construction related to utilities connections (electric power and water supply and others).
- Trial operation of the WWTP in duration of 365 days.
- Sludge disposal in the Trial operation period will be done by Employer.
- Obtainment of an Operation permit including all the required consents and documentation (such as: expert report on explosion safety, summary of fire safety procedures, production of project of maintenance of facility).
- Training of the WWTP staff.

The scope of Works also covers delivery of Plant, test on Completion including operational trials, Tests after Completion, remedying of any defects in the Works and training of future (Employer's) End Recipient's WWTP staff. All activities necessary to be performed in order to put the Works into normal operation and to deliver them to the Employer shall also be carried out. The Conditions of Contract, Price Schedule, such as included in this Tender Dossier, shall be read in conjunction with the Employer's requirements. Matters referred to, shown or described in any of the formers are not necessarily repeated in the latter.

3/12/18

GEORGIOS KARKANIAS
PRESIDENT

2.1.1 Wastewater Treatment Process

The design of the wastewater treatment plant for the town of Danilovgrad is based on the nitrification and denitrification treatment processes with chemical precipitation of phosphorus. Wastewater treatment technology is designed as circulating activated sludge process with pre-denitrification tank.

2.1.1.1 Structures on the sewer network

The hydraulic sewer capacity is about 130 l/s. The sewerage network contains the following constructions:

- connecting shaft with gravel traps and sewage overflow (inlet and overflow manhole)
- septage unit
- automatically cleaned coarse screen, sewage pumping station and sewage overflow

Gravel traps and coarse screen serve as mechanical protection of pumping station. Their hydraulic capacity is maximal sewer flow capacity. Storm water flow rate greater than 26.3 l/s overflowed from the overflow chamber into the river. Flow rate of 26.3 l/s is a maximal hydraulic capacity of WWTP.

Connection to the main collector

Connection sewer system and wastewater treatment plant will be using connecting shafts. Trunk sewer ends in the object of overflow/relief and switching-off chambers in front of the wastewater treatment plant.

This object fulfills two basic functions:

- Control of inflowing quantity of wastewater for the value Qmax = 130 l/s. In the gate chamber a motorized penstock is fitted destined for controlling inflowing quantity of wastewater.
- This motorized penstock warrants inflow controlling and/or full closing the wastewater treatment plant inlet (in case of a heavy failure – e.g. electric power drop-out).

As for spatial arrangement of the inlet / overflow manhole this one is divided into four parts – to the inlet chamber, to the gravel traps chamber, to the overflow/relief chamber and to the penstock/closing chamber. Gravel traps is mechanical protection of equipment against rough substances heavier than water. Gravel and other rough impurities flowing in together with influent wastewater will be trapped there. Extraction of trapped material will be realized with the aid of a lifting device. Hydraulic capacity of gravel traps is 130 l/s. Overflow/relief chamber has been resolved as an overflow/relief chamber with a front over fall. Penstock/closing chamber is provided with a motorized penstock for controlling inflowing quantity of wastewater. Overflow wastewater is introduced by sewerage systems into the river. This system also creates a bypass sewer of WWTP.

The structure includes a scum diaphragm, in conjunction with overflow weir, to prevent coarse impurities, floating substances, oil substances and fats from entering the river.

Furthermore, it is foreseen an automatic station for receiving samples of untreated wastewater.

GEORGIOS KARKANIAS
PRESIDENT
3/12/18

The structure includes a draining area of the containers. The container removal is carried out with a truck.

One flow measuring structure is designed to be installed. One measuring flume will be installed on the storm-water overflow behind the overflow chamber. Parshall measuring flume is used due to their reliability and a wide range of flow rate.

The structure is designed as an open, reinforced-concrete flume made of water-resistance concrete, in which the measuring profile will be installed.

Receipt of content of cesspools and septic tanks

The structure serves for collecting septage from septic trucks collected from cesspools and septic tanks.

Analytically, inside the facility will be installed a gravel trap, a compact fine screen unit for septage receiving and a septic reception tank. The structure includes a water-resistant, covered reception (collection) tank of required capacity. The tank is filled only through an automatic station for receiving septage, appropriately equipped with a electromotor knife gate valve, a flow meter, a pH and temperature measurement probe and a conductivity meter on the inlet pipeline. The tank includes a submersible mixer for homogenizing the content, valve for discharging the tank content by gravity and ultrasonic level meter.

The contents of the septic reception tank are dosed via submersible pumps ahead of coarse screen. Dosage is blocked during storm water flow of wastewater.

Furthermore, it is foreseen an automatic station for receiving samples of septage.

The structure is designed with parameters sufficient also for the planned scope of Stage 2.

The automatic station for receiving septage and the automatic station for receiving samples of septage will be installed into an insulated and heated building.

Automatic coarse screen and pumping station

Automatic coarse screen is designed for 100 % storm water flow (130 l/s). Screenings from the automatic cleaned coarse screen fall into the screw conveyor and finally moved into the container. Ultrasonic differential level meter located ahead and behind of automatic screen controls screen operation. There is two lines, one with mechanically operated coarse screen with 50mm gaps and one with a standby manually operated coarse screen with 50mm gaps.

The structure includes a draining area of the container. The container removal is carried out with a truck.

The pumping station capacity and mechanical pre-treatment facility of WWTP is designed according to wastewater production rate.

The pumping station is resolved as a basement object designed for a slight equalizing of the sewage and for the pumping of the sewage through the mechanical pre-treatment into the biological part of the treatment plant. The pumping station will be equipped with submersible pumps. The number and the capacity of pumps are selected in order to achieve a uniform supply to the treatment plant. The pumps will be operated automatically in dependence on the water level in the pumping sump. Level inside of the pumping station is

3/12/18

GEORGIOS KARKANIAS
PRESIDENT

measured with the ultrasonic level meter. All pumps have frequency inverters for flow control. Pumping station maximal hydraulic capacity is 28.56 l/s for 1st stage. Storm water flow over 26.3 l/s overflows into the river from pumping station. On the pressure pipeline an electromagnetic inductive flow meter will be installed.

Pumping station is structurally designed for a wastewater flow corresponding of 12,000 PE flow (2nd stage). However the pumps will be mounted only on the flow rate max 28,56 l/s which correspond to rainfall flow rate of 6,000 PE.

The wastewater pumped shall be distributed to two separate lines for Stage 2.

Further, the structure includes a scum diaphragm to prevent coarse impurities, floating substances, oil substances and fats from entering the river.

Internal recycles will be less than 1% of WWF.

Table 7: Required pumping station capacity

	Start-up capacity	Design capacity
	l/s	l/s
Average Dry Weather Daily Flow - ADF	6.8	10.4
Maximum Dry Weather Daily Flow - MDF	9.5	14.6
Maximum Dry Weather Hourly Flow - MHF	14.2	21.9
Wet Weather Flow - WWF	26.3	26.3

Table 8: Technical data of pumping station (1st Stage)

Parameter	Unit	Value
Number of pumps (working + standby))	pcs	2+1

3/12/18

GEORGIOS KARKANIAS
PRESIDENT

2.1.1.2 Mechanical wastewater pretreatment unit

Complete wastewater pre-treatment prevents operational problems, such as blockages, wear and silting.

A double-line arrangement of the structure is designed; one separate unit is installed within Stage 1 (6,000 PE). Another, identical, unit shall be installed within Stage 2. A compact mechanical pretreatment unit is designed for each line.

Complete compact mechanical pretreatment unit consists of fine screen with screenings treatment, grit separation and classification with aeration and separation and removal of fat and grease. Hydraulic capacity of the compact mechanical pretreatment unit is 30 l/s (maximum design capacity). Slot of screen is 6 mm. The screen will be equipped to press of screenings. Analytically, screenings will be collected and removed, together with fats by a conveyor with an integrated press. The sand trap will achieve the separation of sand from the wastewater. Organic impurities will be washed from trapped sand. The sand will be removed by a conveyor to a separate container. Air will be supplied by an integrated compressor. The unit operation will be fully automatic, with personnel required only for occasional emptying of the container. Trouble-free handling of the container is ensured. The containers removal shall be carried out with a truck.

The structure will include a valve on the bypass piping of compact mechanical pretreatment unit.

The structure is designed as a reinforced-concrete monolithic slab (foundation) made of water-resistant concrete. The hard-surface area for the containers will be made of concrete, drained to the internal sewage system.

2.1.1.3 Biological treatment process

Wastewater from mechanical pre-treatment will be flowed into the biological step of WWTP. Wastewater treatment technology is designed as circulating activated sludge process.

This process is based on a biological principle as low-load activation with aerobic sludge stabilization. The activation tanks is divided into a predenitrification (anoxic) zone and circulating activated sludge process with anoxic and aeration zones.

In the predenitrification zone the raw sewage is mixed with recirculated sludge from the bottom of secondary sedimentation tank resulting in the formation of activated mixture. Submersion horizontal agitator is used for stirring the activated sludge in the predenitrification.

Circulated activated sludge tank is equipped with submerged agitators too. The nitrification sections will be aerated by fine-bubble aeration elements. From the nitrification sections the activation mixture flows into the secondary sedimentation tank.

GEORGIOS KARKANIAS
PRESIDENT
3/12/18

Flow distribution Chamber I

Structure for equal distribution of wastewater to three separate lines of the biological treatment is designed. The wastewater is distributed by gravity, with overflow including adjustable overflow weir. The structure will include valve. Emergency bypass of the downstream tanks is provided as well.

Predenitrification tank

Predenitrification tank ensures denitrification of oxidized forms of nitrogen contained in the return sludge. Two separate, identical denitrification tanks is designed for Stage 2. One tank will be realized within Stage 1.

The predenitrification tank inlet are mechanically pre-treated wastewater and return sludge from the final settling tank. Predenitrification tank operates in anoxic conditions and is not aerated. It is only mechanically mixed. Minimal hydraulic contact time is higher than 1,9 hour during maximal flow rate and maximal flow of return sludge. An overflow crest is designed on the runoff, allowing even discharge of wastewater to the activated sludge tank.

Circulating activated sludge tank

The circulating activated sludge tank is operated with the presence of oxic and anoxic zones. This type of aeration tank is very suitable for fluctuating wastewater pollution, respectively with gradually increasing quantities of wastewater pollution.

Two separate, identical circulating activated sludge tanks is designed for Stage 2. One tank will be realized within Stage 1.

The tank is mechanically stirred and aerated, and its construction allows the installation, operation, and maintenance of machinery required by the technology used and the manufacturer. The tank includes a denitrification section, stirred mechanically with submersible mixers, and a nitrification section, aerated with aeration elements (membrane diffusers). The shape of the tank and inner partition walls is adapted to the most favorable hydraulic water flow. A runoff manhole with an overflow weir is designed, allowing even discharge of the activated mixture to the final settling tank.

In any case the total sludge age is higher than 20 days.

Because of simultaneous precipitation of phosphorus, the chemical sludge production incorporated into activated sludge production.

GEORGIOS KARKANIAS
PRESIDENT

3/12/18

Table 9: Activated Sludge Tanks

		Start up	Design capacity
Predenitrification tank			
Number of tanks (1st Stage)	pcs.	1	1
Volume of one tank	m^3	363	363
Circulating activated sludge tank			
Number of tanks (1st Stage)	pcs.	1	1
Volume of one tank	m^3	1269.8	1269.8
Standard oxygen transfer rate (SOTR)	kg/d	1719.4	1490.9

Table 10: Technical data of aeration system

Parameter	Unit	Value
Number of blowers	pcs	1+1
Capacity of blower	Nm^3/hour	776

Flow distribution Chamber II

Structure for equal distribution of wastewater to three separate lines of the biological treatment is designed. The wastewater is distributed by gravity, with overflow including adjustable overflow weir. The structure will include valve. Emergency bypass of the downstream tanks is provided as well.

Final Settling Tanks

The activated mixture from the circulating activated sludge tank will flow into the final settling tank, where the separation of sludge from the treated wastewater will take place. After filtration and disinfection the wastewater will then be discharged into the recipient – Zeta River. Part of the settled activated sludge will be returned into the biological treatment facility and the remainder pumped to subsequent treatment as part of the sludge management process.

Two separate, identical final settling tanks is designed for Stage 2. One tank will be realized within Stage 1.

A circular tank is designed for the activated sludge separation. The activated mixture will flow into the center of the tank through a flow distribution structure (influent well). Settled water will be collected in a discharge channel via an adjustable overflow weir (V-notch), located around the tank perimeter. Then it will run off through the window of the runoff shaft to the filtration unit. The tank construction allows the installation of machinery for automatic raking of the bottom and the water surface. Specifically, the removal of the settled sludge and scum is done with rotated radial bridge with bottom and surface scrapers.

3/12/18

GEORGIOS KARKANIAS
PRESIDENT

The collection of floating impurities is provided via skimmer. Settled sludge is collected in the central tank from where it is removed through piping to the sludge pumping station.

The circulated final settling tank meets the design parameters below:

SS loading per surface area at MHF	less than 6,0 kg/m2.hour
Sludge index	not lower than 150 ml/g
Minimal return sludge flow rate	>16 l/s

Table 11: Secondary Settling Tank dimensions

		Start up	Design capacity
Number of tanks (1st Stage)	pcs.	1	1
Tank diameter	m	14	14
Liquid depth of tank	m	4	4

Return activated sludge and excess sludge pumping station

A structure containing pumps for return and excess activated sludge is designed. The structure is located close to the final settling tank. One pumping station is designed to be used for each final settling tank. Structurally, the structure is built within Stage 2, technologically only for Stage 1.

Submersible pumps of return and excess activated sludge will be installed in the sumps. Thus, each sump will contain two return sludge pumps and two excess sludge pumps.

Return activated sludge pumps are two, of which one is operating and one is on standby and they will operate in alternate mode in order to achieve equal number of operating hours. On the pressure pipeline an electromagnetic inductive flow meter will be installed. Both pumps will have frequency inverters. Level inside of the pumping station is measured with one ultrasonic level meter.

Table 12: Technical data for the return activated sludge pumps

Parameter	unit	value
Number of pumps (working + standby) 1st stage	pcs	1+1
Maximum flow of pump	l/s	27,72
Operating range of the pump	%	50 - 100

3/12/18

GEORGIOS KARKANIAS PRESIDENT

Excess sludge pumps are two, of which one is operating and one is on standby and they will operate in alternate mode in order to achieve equal number of operating hours. On the pressure pipeline an electromagnetic inductive flow meter will be installed. Both pumps will have frequency inverters. Level inside of the pumping station is measured with the above mentioned ultrasonic level meter.

Table 13: Technical data for the excess sludge pumps

Parameter	unit	value
Number of pumps (working + standby) 1st stage	pcs	1+1
Maximum flow of pump	l/s	7,25
Operating range of the pump	%	50 - 100

Chemical Phosphorus Precipitation

Chemical phosphorus precipitation unit is added to the treatment process to achieve required outflow concentration. The precipitation is achieved through the addition of ferric chloride sulphate into outlet manhole of circulating activated sludge tank (prior to final settling tank inlet). The phosphorus precipitation will be simultaneous. Ferric chloride sulphate (41% solution) will be dosed from one reservoir. Three membrane pumps is used to dosing solution of ferric chloride sulphate, one for 1st stage, one for 2nd stage and one standby.

The precipitant reservoir is placed on a foundation slab, under the building roof. The area under the reservoir is provided with a leakage basin. Reservoir is made with double walls due to safety reasons, with a capacity sufficient for at least 30 days of operation and equipped with continuous level measurements, three level switches (minimum, maximum, alarm), suction and discharge connections. Liquid P-precipitant is pumped from the auto cistern to the reservoir by means of two chemical resistant pumps with the capacity of 15 m3/h (one in operation and second standby). The flow of the P-precipitant is measured with electromagnetic inductive flow meter. Dosing of the P-precipitant will be in regards to the flow to the biological units.

The structure is designed with parameters sufficient also for the planned scope of Stage 2.

Table 14: Technical data for the P-precipitant storage

parameter	Unit	value
reservoir volume	m^3	10
number of reservoirs	pcs	1
number of dosing pumps	pcs	2+1
maximal dosing pump capacity	l/hour	30

2.1.1.4 Filtration unit

In order to meet the effluent quality requirements and additional the effective operation of UV system is foreseen filtration unit.

The proposed microscreen drum filter of FBB type is suitable for tertiary treatment, mainly for removal of undissolved matter in municipal wastewater treatment plants.

Biological treated wastewater containing solid particles flows through the inlet pipe (sewer) into the interior part of the filter drum. Impurities are caught on the inner side of the filter cloth and the filtered wastewater flows through the cloth out. The entire filter remains off during this process. As the filter cloth slowly becomes clogged by the increasing amount of filtered debris, its resistance to the flow increases and the water level inside the filter drum rises. When the preset difference between the levels inside and outside of the filter drum is reached, the water level sensor positioned at the front of the filter, is automatically activated. Simultaneously the drum drive and the backwash pump which pumps the filtered wastewater into the jet rinse system are activated. The debris accumulated on the inner side of the filter cloth is removed by the directed jet stream of water from the nozzles and then washed into the waste trough positioned in the inner drum. The debris is then washed into the sludge tank where it is washed out by the sludge pump. This pump is automatically controlled by the level sensors located on the wall of the sludge tank.

After the rinsing process is finished, hydrostatic pressure drops. The rinsed cloth is moved to the bottom of the filter by the rotation of the drum, the difference in levels inside and outside the drum diminishes and the sensor automatically switches off the drum rotation and the pump. The rotating drum and the pump remain off until reactivated. This operation mode repeats in cycles. The ratio of the rest cycle and the rotation cycle depends on the amount of detritus flowing into the filter, its character and the condition of the filter cloth.

The structure includes two reinforced-concrete channels in which two separate drum filters will be installed, one for stage 1 and one for stage 2. Even distribution of treated wastewater to two channels is ensured for Stage 2, as well as a shutdown of either of the two channels. The structure is built within Stage 1 and one drum filter is installed within Stage 1.

2.1.1.5 UV disinfection of outflow – Measuring effluent flume

UV system serves as tertiary treatment - outflow disinfection.

UV radiation in the on going process wastewater appears as microbiologically effective, certain technical and cost-saving way to reduce germs. The practice is achieved by reducing the amount of UV radiation germs up to several orders of magnitude.

The advantages of UV disinfection are many including:

- immediate and reliable disposal of bacterial cultures without addition of chemicals
- photochemical reduction of undesirable substances
- no formation of THM or AOX
- no undesirable by-products
- no adverse taste or odour effects of the treated water
- no storage or dosing of disinfectant chemicals
- effectiveness of UV disinfection is dependent on the pH value of treated water
- needs no special reaction vessel or the corresponding time delay
- minimum space requirements of UV technology
- low investment and operating costs and high operational reliability and performance

The decisive criterion for the effectiveness of UV radiation is applied to determine the minimum dose for a given operating condition in the medium disinfected. The dose is defined as the product of intensity and duration of radiation exposure and gives in mJ/cm2. The minimum dose of UV light was calculated by the manufacturer and meets the effluent quality requirements.

The channel UV-system is equipped with automatic quartz sleeve cleaning system and UV-intensity monitoring.

The structure is designed as a single-storey building with roof. The structure includes two reinforced-concrete channels in which two separate UV disinfection units will be installed, one for stage 1 and one for stage 2. Even distribution of treated wastewater to two channels is ensured for Stage 2, as well as a shutdown of either of the two channels. The whole structure is designed to be built and one UV system is installed within Stage 1.

Furthermore, it is foreseen an automatic station for receiving samples of treated wastewater.

One flow measuring structure is designed to be installed. One measuring flume will be installed on the treated wastewater runoff at the end of the process. Parshall measuring flume is used due to their reliability and a wide range of flow rate.

The structure is designed as an open, reinforced-concrete flume made of water-resistance concrete, in which the measuring profile will be installed.

2.1.1.6 Sludge Treatment Units

The WWTP Danilovgrad sludge treatment facility will treat excess activated sludge and chemical sludge (after the incorporation of chemical phosphorus precipitation), which will be pumped from the system together with activated sludge. The production of excess activated sludge includes sludge from chemical precipitation of phosphorus.

Aerobic stabilization and thickening of the excess sludge

An aerated tank is used for stabilization of the mixture of excess activated sludge and sludge from chemical precipitation of phosphorus. The period of sludge accumulation in aerobic condition guarantees a sufficient stabilization of the sludge. Excess sludge is pumped (from excess sludge pumping station) to the aerated excess sludge stabilization tank. Aerobic stabilization tank is intermittently aerated. The excess sludge is thickened by sedimentation and decantation during the interruption of aeration in the sludge stabilization tank. Before each sludge discharge from sludge activation tank, the aeration in tank of sludge stabilization is stopped. The sludge settling and thickening is about 3-4 hours. Sludge aerobic stabilization tank has aeration system with jet aerator for additional sludge stabilization, an ultrasonic level meter, overflow, three level switches (minimum, maximum, alarm), one submersible mixer and two (one standby) progressive cavity sludge pumps for emptying to the sludge holding tank.

The tank is located close to the mechanical sludge dewatering machinery-room.

The structure is designed with parameters sufficient also for the planned scope of Stage 2.

The aerobic stabilization of sludge will assure a totally smell-free operation of the sewage treatment plant. The stocked condensed sludge (approximately 2 - 3%) will be dewatered with help of polymer flocculation agent in a centrifuge device and brought away for the agricultural exploitation (it is aerobic stabilized). Stabilized sludge holding tank is used for equalizing sludge before its dewatering.

Table 15: Technical data for Sludge aerobic stabilization tank

		Start up	Design capacity
Capacity of the treatment plant	PE	3 900	6 000
Volume of the aerobic stabilization excess sludge tank	m^3	353.25	353.25
Jet aerator capacity	Nm^3/hour	620	620

Aerobic stabilized/thickened sludge holding tank

Aerobically stabilized/ thickened sludge is accumulated in a mechanically mixed holding tank. The volume of sludge holding tank is 60.84m3.The tank's capacity is sufficient to hold a 4 days production of thickened sludge for 1st stage. Aerobically stabilized/ thickened sludge is pumped from the holding tank to the mechanical dewatering unit.

The tank is located close to the mechanical sludge dewatering machinery-room.

3/12/18

GEORGIOS KARKANIAS
PRESIDENT

The structure is designed with parameters sufficient also for the planned scope of Stage 2.

Sludge Mechanical Dewatering unit

The produced aerobically stabilized/thickened sludge will be dewatered using a centrifuge (decanter). During 1st Stage, only the stored sludge will be dewatered.

Sludge from the sludge holding tank is pumped with two progressing cavity pumps, of which one is operating and one is on standby and they will operate in alternate mode in order to achieve equal number of operating hours. All pumps and motors of the centrifuge have frequency inverters. Pipeline to the centrifuge is equipped with an electromagnetic inductive flow meter.

Design of centrifuge:

Weekly operation time	5 days
Daily operation time (including start and washing of the centrifuge)	5 hours
Minimum final dry matter content (only with polyelectrolyte adding)	23 %

Table 166: Technical data for the sludge dewatering

Parameter	unit	value
Weekly operation time	d	5
Daily operation time (including start and washing of the centrifuge)	h	5
Number of centrifuges	-	1
Flow of centrifuge	m^3/h	5
Sludge feeding pump capacity	m^3/h	Max 6
Number of sludge feeding pumps	-	1+1
Number of dewatered sludge containers	-	2

A machinery-room for the mechanical sludge dewatering is designed and is located close to the sludge aerobic stabilization and thickening tank. The structure is designed as a single-storey building with roof. The building shall be thermally insulated. The machinery-room shall be ventilated and heated to the min of 10 °C, or according to valid regulations. The building includes a separate switch room, separated from the machinery-room, with an independent ventilation system. The machinery-room contains machines for sludge dewatering and its structure allows the installation of conveyor. The design assumes mechanical-technological equipment for mechanical sludge thickening to be added within Stage 2. A hard-surface area for containers will be built next to the building. The spatial arrangement and orientation of the building allows trouble-free handling of the container with a truck. The building also includes room to hold the equipment of

3/12/18

GEORGIOS KARKANIAS
PRESIDENT

aerobic sludge stabilization. A heating/cooling system is designed in the building to allow the operation at extreme temperatures and at the maximum loading of the machinery.

In the mechanical sludge dewatering structure the air-conditioning system includes air deodorizing ensuring the removal of odours from the air discharged to the surrounding outer environment. Particularly limits set by the EIA, which forms an integral part of the WWTP design and construction, will be observed.

Structurally, the structure is built within Stage 2, technologically only for Stage 1.

The hard-surface area for the containers will be made of concrete, drained to the internal sewage system.

At present WWTP Danilovgrad is not exist, therefore we do not know the quality of its sludge. We also do not know soil composition in field, where will be applied dewatered sludge.

Danilovgrad is not industrial city, therefore we do not expect the production of highly contaminated sewage sludge. Therefore, we expect the maximum sludge contamination by point C, according point b, Annex 1 of the Regulation.

Due to the uncertain composition of sludge (sludge do not exists), we propose to use stabilized and dewatered sludge from WWTP Danilovgrad for reclamation of landfill. The minimal concentration of dry matter in the dewatered sludge is 25% (after dewatering in the centrifuge and further dewatering into the sludge storage site).

Mechanical sludge thickening (2nd stage)

The mechanical sludge thickening machinery-room will be realized within Stage 2 of the construction, structurally it will be prepared within Stage 1. The mechanical-technological equipment will be located in the mechanical sludge dewatering machinery-room within Stage 2.

Dewatered sludge storage site

The structure will serve as a reserve temporary storage site of dewatered sludge prior to its disposal. Also, this structure will serve for further sludge dewatering, so that to be achieved concentration of dry matter in the dewatered sludge minimum 25%.

This storage site will be covered with transparent material.

The structure is designed with parameters sufficient also for the planned scope of Stage 2.

The structure is designed as a reinforced-concrete monolithic structure with a handling area, made of water-resistant concrete, consisting of the bottom (reinforced-concrete slab) and reinforced-concrete supporting walls from three sides, covered with roof.

The effective area of the structure is 325m2 (12.5m * 26m).

3/12/18

GEORGIOS KARKANIAS
PRESIDENT

2.1.1.7 Common requirements of WWTP

Diesel generator

Diesel generator is provided as a substitute to power supply. Diesel generator will be supply electric power for WWTP operation at the time of power outage. Sludge management will not be supplied with electricity from diesel generator.

Service water preparation unit

Potable and service water distribution system is designed for the WWTP premises. The source of potable water will be the existing supply system of the town of Danilovgrad. A connection running along an existing unpaved road to the WWTP is designed. The connection includes a measurement shaft. The in-compound potable water distribution system will supply all main structures. It will be used for hygienic purposes and operation of those technological equipment and machinery which are required to use potable water. The distribution system is designed to meet hygienic and technological requirements.

The source of service water will be treated water from the WWTP effluent obtained from the outflow of the UV disinfection structure. The service water distribution is designed according to the operational requirements and needs of technological equipment and machinery supplied. Alternatively, potable water may be used as the source of service water.

Specifically, treated wastewater, defined as service water, is used as wash water for the equipment such as coarse and fine screens, spiral conveyers, spiral presses, centrifuge etc. After the disinfection one submersible pump pumps water into the tank with effective volume 4,5 m3 (1.5m*1.5m*2m), equipped with automatic supplemental filling with potable water and three level switches, placed inside the structure. A set with two pressure boosting pumps and expansion vessels (automatic pressure station) raises the pressure, which is necessary for the washing of individual equipment (max 6 bar). The automatic pressure station is equipped with its own automatic control of pumps with frequency converters.

A fire-fighting water source is provided in compliance with relevant regulations.

Influent and effluent waste water monitoring

The operator ensures sampling of inflow wastewater, treated wastewater, concentration of mixed liquor etc. Samples will be analyzed by an accredited laboratory. The number of the samples is minimal 1 times monthly. During the start-up of WWTP operation it is recommended to make samples analyses weekly.

Sampling profiles:

- Inflow wastewater – pH, COD, BOD5, SS, VSS, NKj, Ptot
- Treated wastewater – pH, COD, BOD5, SS, VSS, Ntot, N-NH4, N-NO3, Ptot
- Mixed liquor in activated basin – Imhoff, SS, VSS
- Return and excess sludge – SS, VSS

3/12/18

GEORGIOS KARKANIAS
PRESIDENT

- Stabilized sludge – SS,VSS
- Dewatered sludge - TS, VTS, SS, VSS

Flow measurement:

- Outflow of treated wastewater
- Return sludge
- Excess sludge
- Flow to the sludge dewatering
- Dose of phosphorus precipitation agent
- Dose of solution of organic flocculant

Installation of online analysers is not proposed.

Waste water sludge monitoring

Sludge is the result of treatment and is directly in the function of treatment level and technology. The quality of sludge will be analysed regularly to prevent possible hazardous impacts on the environment. Sludge will be managed in accordance with the regulations "PRAVILNIK o bližim uslovima koje treba da ispunjava komunalni kanalizacioni mulj. količine. obim. učestalost i metode analize komunalnog kanalizacionog mulja za dozvoljene namjene i uslove koje treba da ispunjava zemljište planirano za njegovu primjenu", "Official Gazette no. 89/09 of 31 December 2009".

The monitoring programme involves the following indicators:

- Quantities of the processed sludge;
- Mass of dry substance;
- Concentration of total N (mg/kg DS.);
- Concentration of total P (mg/kg DS);
- Concentration of total K (mg/kg DS);
- Concentration of Cd (mg/kg DS);
- Concentration of Pb (mg/kg DS);
- Concentration of Cr (mg/kg DS);
- Concentration of Zn (mg/kg DS);
- Concentration of hazardous organic substances (PCB,. HCH, etc.) (µg/kg DS)

PRESIDENT

3/12/18

2.1.1.8 Blower house

The structure, in which blowers of circulating tanks are to be placed, is designed as a single-storey building with a saddle roof. The building ensures safe operation and maintenance of the blowers. It is divided into a blower room and a switch room. The building shall be fitted with equipment for handling the blowers (their assembly and disassembly). The air intake is located on the northern part of the building. The blower room shall be clad with noise insulation to prevent the maximum permissible noise level from being exceeded at the WWTP premise border. A heating/cooling system is designed in the building to allow the operation at extreme temperatures and at the maximum loading of the blowers.

Structurally, the structure is built within Stage 2, technologically only for Stage 1.

Building foundations, foundations for technological equipment, cable troughs, supporting floor slabs, and other supporting concrete parts of the building shall be made of reinforced-concrete. The ceiling is designed in the form of a monolithic reinforced-concrete structure.

The walls shall be built from perforated bricks of a complete bricklaying system.

The roof supporting structure shall be formed by a system of wooden prefabricated truss girders with longitudinal wind bracing.

Standard internal plaster, lime-cement external plaster; reinforced-concrete floor with mineral filling and dust-prevention coating; plastic windows, steel doors.

The structure shall include locksmith's products (lids, covers, etc.).

2.1.1.9 Operation building

The structure is designed as a single-storey building with a saddle roof. It shall serve as the control and administrative building, providing facilities for the total of 11 persons. The building contains a control room with a view of the WWTP structures, office, meeting room, small kitchen, clean and dirty changing rooms, daytime room, washroom and toilet, and a room for handling samples with basic laboratory equipment. The building shall be thermally insulated with residential rooms heated to the min of 20 °C, or according to valid regulations.

The structure is designed with parameters sufficient also for the planned scope of Stage 2.

Foundations, supporting floor slabs, and other supporting concrete parts of the structure shall be made of reinforced-concrete. The ceiling shall be made in the form of a monolithic reinforced-concrete structure.

The walls shall be built from perforated bricks of a complete bricklaying system.

The roof supporting structure shall be formed by a system of wooden prefabricated truss girders with longitudinal wind bracing.

Standard internal plaster, lime-cement external plaster; floors with industrial ceramic skid-proof tiles; walls with ceramic cladding; plastic windows, steel doors.

3/12/18

GEORGIOS KARKANIAS
PRESIDENT

The structure includes locksmith's products (lids, covers, etc.).

Warehouse (part of operation building)

The structure is designed as a part of operation building (single-storey building with a saddle roof). This part of building provides safe storage of tools, machines, and material used for the WWTP operation, repairs, and maintenance. The net storage area corresponds to the minimum requirements and is kept dry and clean. The warehouse includes a space for storing acids and alkalis. This part of building shall be thermally insulated, ventilated, and heated to the min of 10 °C, or according to valid regulations.

The structure is designed with parameters sufficient also for the planned scope of Stage 2.

Foundations, supporting floor slabs, and other supporting concrete parts of the structure shall be made of reinforced-concrete. The ceiling shall be made in the form of a monolithic reinforced-concrete structure.

The walls shall be built from perforated bricks of a complete bricklaying system.

The roof supporting structure shall be formed by a system of wooden prefabricated truss girders with longitudinal wind bracing.

Standard internal plaster, lime-cement external plaster; floors with industrial ceramic skid-proof tiles; walls with ceramic cladding; plastic windows, steel doors.

The structure shall include locksmith's products (lids, covers, etc.).

2.1.1.10 Garages

It is provided two garages, one for truck and one for two passenger cars.

The structures is designed as single-storey buildings with a saddle roof. The first building provides parking space for one truck and the second building provides parking space for two passenger cars and separate location of mobile backup power supply including the necessary equipment. The buildings shall be heated to the min of 5 °C, or according to valid regulations.

The structures is designed with parameters sufficient also for the planned scope of Stage 2.

Foundations, supporting floor slabs, and other supporting concrete parts of the structure shall be made of reinforced-concrete. The ceiling shall be made in the form of a monolithic reinforced-concrete structure.

The walls shall be built from perforated bricks of a complete bricklaying system.

The roof supporting structure shall be formed by a system of wooden prefabricated truss girders with longitudinal wind bracing.

Standard internal plaster, lime-cement external plaster; mesh-reinforced concrete floors with filling, resistant against abrasion, mechanical damages and dustiness; plastic windows, steel doors; automatic, electrically-driven sectional garage doors with thermal insulation and integrated openings.

The structure shall include locksmith's products (ventilation grilles, etc.).

5.1.1 One (1) overflow weir for flow distribution 18
5.1.2 One (1) valve on pipeline 18
5.1.3 One (1) overflow telescopic valve for by pass 18

5.2 PREDENITRIFICATION TANK 18
5.2.1 One (1) submersible mixer with lifting device in the predenitrification tank 18

5.3 CIRCULATING ACTIVATED SLUDGE TANK 19
5.3.1 Two (2) submersible mixers with lifting devices, one per corridor 19
5.3.2 Two (2) rotary lobe blowers for aeration, one standby, with noise cover 19
5.3.3 Two (2) frequency converters (inverters) for blowers 19
5.3.4 One (1) lifting device (monorail) for blowers 19
5.3.5 One (1) fan for ventilation of blowers building 20
5.3.6 One (1) main air pipeline 20
5.3.7 Two (2) air distribution pipes with batterfly valves for flow control or isolation 20
5.3.8 Two (2) air grids for diffusers 20
5.3.9 One hundred and ninety two (192) fine bubble membrane diffusers (disc type), ninety six per grid 20
5.3.10 One (1) overflow weir 20
5.3.11 One (1) dissolved oxygen meter 21
5.3.12 One (1) MLSS meter 23
5.3.13 One (1) mixer (vertical shaft) in outlet manhole of the tank 23

5.4 FLOW DISTRIBUTION CHAMBER II 24
5.4.1 One (1) overflow weir for flow distribution 24
5.4.2 One (1) valve on pipeline 24
5.4.3 One (1) overflow telescopic valve for by pass 24

5.5 FINAL SETTLING TANK 24
5.5.1 One (1) rotated radial bridge with bottom and surface scrapers 24
5.5.2 One (1) scum skimmer 24
5.5.3 One (1) influent well 24
5.5.4 One (1) circumferential overflow weir (V- notch) 25
5.5.5 One (1) circumferential scum diaphragm 25

5.6 RETURN ACTIVATED SLUDGE AND EXCESS SULDGE PUMPING STATION 25
5.6.1 Two (2) submersible pumps for return sludge, one standby 25
5.6.2 Two (2) frequency converters (inverters) for return sludge pumps 25
5.6.3 One (1) electromagnetic inductive flow meter for return sludge 26
5.6.4 One (1) ultrasonic level meter 26
5.6.5 Two (2) lifting devices (davit) for pumps, one for excess sludge pumps and one for return sludge pumps 26
5.6.6 Two (2) submersible pumps for excess sludge, one standby 27
5.6.7 Two (2) frequency converters (inverters) for excess sludge pumps 27
5.6.8 One (1) electromagnetic inductive flow meter for excess sludge 27
5.6.9 One (1) valve on sludge pipeline 28

5.7 CHEMICAL PHOSPHORUS PRECIPITATION 28

3/12/18

5.7.1 Three (3) dosing (diaphragm) pumps for phosphorus precipitation chemical solution, one standby, with pipes and valves 28
5.7.2 One (1) electromagnetic inductive flow meter for phosphorus precipitation chemical solution 28
5.7.3 One (1) double-walled reservoir for phosphorus precipitation chemical solution, with three level switches 29
5.7.4 Two (2) pumps (magnetic driven, plastic, centrifugal) for chemical solution, one standby 29

6. FILTRATION UNIT 30
6.1 One (1) overflow penstock for filter tank flow distribution and isolation 30
6.2 One (1) penstock for bypass 30
6.3 One (1) automatic cleaned microscreen rotary drum filter for wastewater tertiary treatment 30

7. UV DISINFECTION UNIT - EFFLUENT 32
7.1 Two (2) overflow penstocks for UV channel isolation 32
7.2 One (1) UV disinfection automatic cleaned system 32
7.3 One (1) ultrasonic flow meter with parshall flume 34
7.4 One (1) automatic station for receiving treated wastewater samples 34
7.5 One (1) submersible pump for service water tank 35
7.6 Three (3) level switches for submersible pump operation 35
7.7 One (1) lifting device for submersible pump 35
7.8 One (1) overflow weir in UV outlet manhole 35

8. SLUDGE TREATMENT UNITS 36

8.1 SLUDGE AEROBIC STABILISATION AND THICKENING TANK 36
8.1.1 One (1) submersible mixer with lifting device 36
8.1.2 One (1) submersible jet aerator, with one extra pump stock 36
8.1.3 One (1) ultrasonic level meter 36
8.1.4 Three (3) level switches 37
8.1.5 One (1) lifting device for jet aerator 37
8.1.6 Two (2) drainage overflow pipes with gate valves 37
8.1.7 Two (2) progressing cavity (screw) sludge pumps for feeding holding tank, one standby, with overpressure protection and dry run protection 37
8.1.8 Two (2) frequency converters (inverters) for sludge pumps 37

8.2 SLUDGE HOLDING TANK 38
8.2.1 One (1) submersible mixer with lifting device 38

8.3 SLUDGE MECHANICAL DEWATERING UNIT 38
8.3.1 Two (2) progressing cavity (screw) sludge pumps for decanter feeding, one standby, with overpressure protection 38
8.3.2 Two (2) frequency converters (inverters) for sludge pumps 38
8.3.3 One (1) electromagnetic inductive flow meter for stabilized/thickened sludge 39
8.3.4 One (1) centrifuge (decanter) for sludge dewatering 40
8.3.5 One (1) automatic preparation device for polyelectrolyte 41
8.3.6 Two (2) progressing cavity (screw) pumps for dosing polyelectrolyte, one standby, with overpressure protection 42
8.3.7 Two (2) frequency converters (inverters) for polyelectrolyte dosing pumps 42
8.3.8 One (1) electromagnetic inductive flow meter for polyelectrolyte solution 42
8.3.9 One (1) screw conveyor for dewatered sludge 43
8.3.10 Two (2) containers for dewatered sludge 43
8.3.11 One (1) sludge container chassis with electric drive 43
8.3.12 One (1) fan for ventilation of sludge dewatering building 43

3/12/18

8.3.13 One (1) lifting device (overhead crane) for dewatering equipment 43

9. SERVICE WATER UNIT 44

9.1 One (1) automatic pressure station with two (one standby) centrifugal pumps for service water 44

10. TRANSFORMER STATION, POWER SWITCHBOARDS, BACKUP POWER SUPPLY 45

10.1 Medium Voltage Switchboard 45
10.2 Transformer 45
10.3 Low Voltage Main Distribution Switchboard 45
10.4 Two (2) Power Distribution Switchboards (PDC) 45
10.5 Backup Power Supply Unit 46

11. AUTOMATION SYSTEM & SCADA 47

3/12/18

1. INLET AND OVERFLOW MANHOLE

1.1 Four (4) penstocks for chambers isolation

- manufacturer	: KARKANIAS SA
- dimensions (W x H)	: 800 x 600 mm
- material	: AISI 304

1.2 Two (2) gravel traps

- manufacturer	: KARKANIAS SA
- dimensions (W x L x H)	: 1000 x 1000 x 400mm
- bar spacing	: 80mm
- material	: AISI 304

1.3 One (1) lifting device for gravel traps

- manufacturer	: KARKANIAS SA
- material	: st37
- lifting capacity	: 1500kg

1.4 One (1) motorized penstock for controlling inflowing quantity of wastewater

- manufacturer	: KARKANIAS SA
- dimensions (W x H)	: 800 x 800 mm
- material	: AISI 304
Gearmotor	
- power	: 0,37KW
- electrical connections	: 400V, 50Hz

1.5 One (1) scum diaphragm

- manufacturer	: KARKANIAS SA
- material	: AISI 304

1.6 One (1) overflow weir

- manufacturer	: KARKANIAS SA
- material	: AISI 304

3/12/18

1.7 One (1) ultrasonic flow meter with parshall flume

- manufacturer : SIEMENS
- type : Sitrans LUT 430 (transducer)
  Echomax XRS 5 (sensor)

Ultrasonic transducer with ultrasonic sensor for contactless measurement of fill levels, distances, volumes, flow rates, tendencies or quantities in open sluices, channels or dams with energy saving algorithms and time to spill calculation, preprogrammed arithmetic operations for linearization of Parshall sluices, rectangular sluices, overfall or V dams and half shells, determination of volume as well as control of rainwater, vent pumps and flushing dumps, programming of one universal trace with 40 supporting points, programming by means of local push buttons or EDD or DTM based software, dynamic envelope curve adaptation for echo analysis, automatic suppression of interfering echo, HART communication, data logging, power supply 100 - 230 V AC, output 4 mA – 20 mA, load 600 ohm, 3 relays rated power 5 A at 250 V AC, 2 normally open contacts, 1 changeover contact, accuracy 0.17 %, field enclosure degree of protection IP 65, ambient temperature -20 – +50 °C, LCD display 60 mm x 40 mm with backlighting, parameter backup capability,

Ultrasonic sensor with connecting cable 10 m, measuring range 0.3 – 8 m, beam angle 10°, measuring frequency 44 kHz, degree of protection IP65/IP68, approval according to CE, FM, CSA(US/C), UL, C-TICK, integrated temperature compensation, ambient temperature -20 – +50°C, including operating instructions, mounting material, supply and mount ready-to-operate.

1.8 One (1) automatic station for receiving untreated wastewater samples

- manufacturer : HACH
- type : AS950

Sampler

Housing material: Impact resistant ABS plastic, 3-section construction Double-walled base with 2.54 cm insulation, direct ice contact with bottles (Sampler)

Temperature: Operating: 0 - 49 °C
Storage: -40 - 60 °C

Power requirements (Voltage): 12 V DC

Dimensions (W x H x D) Standard Base: 50.5 cm x 69.4 cm

Weight Standard: 15 kg with (24) 1 L Polyethylene bottles

Controller

Housing material: PC/ABS blend, NEMA 4X, 6, IP68, corrosion and ice resistant (Controller)

Display: 1/4 VGA, Colour; self-prompting/menu-driven program

User interface: Membrane switch keypad with 2 multiple function soft keys

Languages user interface: English, French, Spanish, Italian, German, Portuguese, Chinese

Lock function: Access code protection prevents tampering

Memory: Sample history: 4000 records;

3/12/18

Data log: 325,000 records;

Event log: 2000 records

Communication capabilities: USB and optional RS485 (MODBUS)

Inputs: One 0/4-20 mA input for flow pacing

Certifications: CE, UL2

Sample container

(24) 1 L Polyethylene bottles

1.9 Two (2) containers for gravels

- manufacturer	: VAN
- type	: NM-5V
- capacity	: 5m3
- dimensions (W x L x H)	: 1700 x 3000 x 1250mm

1.10 One (1) gravel container chassis with electric drive

- manufacturer	: KARKANIAS SA
- loading capacity	: 9tn

3/12/18

2. SEPTAGE UNIT

2.1 One (1) electromotor knife gate valve on the inlet pipeline

- manufacturer : VAG
- type : knife gate

2.2 One (1) gravel trap

- manufacturer : KARKANIAS SA
- dimensions (D x H) : 600 x 600
- material : AISI 304

2.3 One (1) electromagnetic inductive flow meter on the inlet pipeline

- manufacturer : SIEMENS
- type : Sitrans F M MAG 5100 W (sensor)
  : Sitrans F M MAG 5000

Flow sensor

Flowmeter for water and wastewater treatment plants for compact or separate transmitter. NBR hard rubber lining, integrated grounding and measuring electrodes made of Hastelloy C, flange size according to EN 1092-1, ambient temperature -40 – +70 °C, temperature of medium -10 – +70 °C, flange and flowmeter housing made of painted steel, terminal box with cable gland M20, flash memory to save calibration, verification data of sensor, and save customer-specific settings, degree of protection IP 67, approvals PED-97/23EG, removable part as spare, supply and mount ready-to-operate.

Transmitter

Microprocessor-controlled transmitter in compact or offset design in glass fibre-reinforced polyamide housing with backlight, three-line, alphanumeric display for flow, counter for forward, reverse or net flow, indication of flow direction, comprehensive self-diagnostics for error signalling and recording. Keypad with display unit, leak flow volume suppression, measuring principle with constant field pulsing, automatic zero adjustment, flash memory for automatic recording of calibration and verification data of sensor data as well as customer specific settings, measuring error 0.4 %, simultaneous utilization of analog output 0/4 – 20 mA, pulse output, digital input and output, relay output 24 V DC/1 A, as well as electrical isolation of inputs and outputs. Ambient temperature -20 - +60 °C, power supply 24 V DC, degree of protection IP 67, supply and mount ready-to-operate.

3/12/18

2.4 One (1) pH and temperature meter on the inlet pipeline

- manufacturer : B&C Electronics

Controller PH6587

- Inputs: pH electrodes (glass or antimony) / ORP electrodes / Pt100 / Pt1000
- Zero: ±2pH, ±100mV, ±5°C, ±9°F
- Sensitivity: 80 ÷ 110 % (70 ÷ 140 % antimony)
- Resolution: 0.01 pH, 1 mV, 0.1 °C/°F
- Accuracy: 0.2 % / Repeatability: 0.1 % / Non-linearity: 0.1 %
- Dual filter software: 0.4 ÷ 50.0 seconds for small and large variations
- Dual analog output: 0-20 mA / 4-20 mA Rmax 600 Ω
- Dual set points HI/LO: ON/OFF - PFM - PWM, SPST relays
- Hysteresis: 0 ÷ 1.40 pH, 0 ÷ 200 mV
- Delay: 0 ÷ 100.0 seconds
- Alarm: SPDT relay with delay 0 ÷ 100.0 seconds
- Cleaning function:
    - off / autoclean / manual, relay SPDT repetition time 0.1 ÷ 100.0 hours
    - cleaning time 1.0 ÷ 60.0 seconds
    - holding time 0.0 ÷20.0 minutes
    - SPST and SPDT relay contacts: 220 V - 5 A resistive load
- Operating temperature: -10 ÷ 60 °C
- Humidity: 95% without condensation
- Power supply: 85 ÷ 264 Vac - 50/60 Hz
- 9 ÷ 36 Vdc, 12 ÷ 24 Vac (option 091.42x)
- Terminal blocks: removable
- Weight: 1360 g
- Enclosure: ABS, IP 65 protection
- Dimensions: 256x230x89 mm
- EMC/RFI conformity: EN 61326

pH electrode SZ 1150

- PTFE double junction, polymeric gel, built-in Pt100.
- Range: 0/12 pH
- Temperature: 0/100 °C
- Pressure: 10 bar
- Body: in PVDF, Military 4-pin connector, 3/4" NPT thread
- Length: 140 mm (45 mm in immersion)

3/12/18

2.5 One (1) conductivity meter on the inlet pipeline

- manufacturer : B&C Electronics

Controller C7685

Selectable input from: a. 2 electrodes cells

b. transmitter 080310 and 4 electrodes cells

c. transmitter 080310 and inductive cells

Measurement range: 0.2mS÷40S with conversion capability in %, g/l, Beaume

Constant's cell: 0.1 / 0.2 / 0.5 / 1 / 2 / 5 / 10

Input for temperature measurement: Sensor RTD Pt100

Temperature compensation: Automatic and manual

Digital LCD display

Operation: Automatic and manual

Calibration parameters display

Dual set-point and alarm conditions display

Analog output 0-4/20mA

Dual Set-point with hysteresis, delay, and min/max programmable functions

Dual filter software 0,4/50 sec

Software: 3 access levels, user friendly, keyboard lock, watch-dog

Automatic overload protection and reset

EEPROM parameters storage

Power supply: 220V / 50Hz.

Watertight enclosure BC9616.2 with transparent front door

Protection: IP 65 (NEMA 4X)

Size: 200x200x187 mm

Dimensions: 200x200x187 mm

Probe SZ 3300.1

Graphite Electrode, Applications: From 200 μS to 200 mS.

Cell constant: K = 1 cm-1

Thermocompensator: Pt100

Material in contact with liquids: PES-graphite L=55 mm

Temperature: 100 °C max. at 10 bar, Pressure: 16 bar at 25 °C

Connector: 4-pin, Thread: 3/4" NPT

3/12/18

2.6 One (1) automatic cleaned fine screen, drum with screenings screw

- manufacturer : SEFT
- type : STV / C50
- flow : 50-60m3/h
- screenings weight and volume reduction : ≥40-50%
- External structure in stainless steel AISI304L
- Tank in stainless steel AISI304L
- Shaft less spirals in high carbon steel painted RAL 6029
- Bolts in A2
- Anti-wear material: bolted plates in stainless steel AISI304L

- Loading basket diameter: Ø456 mm
- Screw diameter for transport / compaction: Ø219 mm
- Filtration type: rounded holes
- Dimension: Ø10 mm
- Inclination: 35°
- Rectangular outlet spout for screening discharge 325 x 285 mm
- Basket cleaning through nylon bolted brushes
- Inlet: alum. DN100 Perrot w/motorized valve (24V)
- Outlet: alum. DN200 PN10
- Total length: 3.590 mm (motor excluded)
- Discharging height: 1.500 mm from ground level
- Washing system on compaction zone with manual valve
- Washing system on loading zone with manual valve
- Washing system on cesspool inlet zone with manual valve
- PE breathing valve on screw screen tank
- PE pipe for returning liquid of compaction zone
- predisposition for rod level sensor
- limit-switches for opening hatches
- Telescopic support foot in stainless steel AISI 304L
- Eyebolts

<u>Screw</u>

-Motor 1,1 kW, 400V, 50Hz, 3 phases, 4 poles, IP55, F class, 11 rpm, BONFIGLIOLI

3/12/18

2.7 One (1) submersible mixer with lifting device in the septage collection tank

- manufacturer	: WILO
- type	: TR 21.145-4/11 S14
- propeller diameter	: 210mm
- propeller speed	: 1390rpm
- rated power	: 1,3 KW
- power input (duty point)	: 1,2 KW
- maximum power input	: 1,74 KW
- electrical connections	: 400V, 50Hz

2.8 Two (2) submersible pumps in the septage collection tank, one standby

- manufacturer	: WILO
- type	: Rexa PRO V06 DA-623 / EAD1X4-T0015-540-O
- flow	: 5,2m3/h
- head	: 6,4m
- speed	: 1413rpm
- rated power	: 1,5 KW
- power input (duty point)	: 0,71 KW
- maximum power input	: 1,94 KW
- electrical connections	: 400V, 50Hz

2.9 One (1) lifting device (davit) for pumps

- manufacturer	: KARKANIAS SA
- material	: st37
- lifting capacity	: 250kg

3/12/18

2.10 One (1) ultrasonic level meter

- manufacturer : SIEMENS
- type : Sitrans Probe LU

Ultrasonic transducer with 2-wire technology, for detecting the level and volume of liquids and sludge, continuous measuring from 0.3 to 6 m, frequency 54 kHz, communication over 4 – 20 mA / HART, dynamic envelope adjustment for echo analysis, autom. suppression of interfering echo, ambient temperature -40 – +80 °C, integrated temperature compensation, sensor material PVDF copolymer, plastic housing, cable entry 2x M20 x 1.5, process connection screw thread G 2", EEPROM, programming via infrared receiver without opening the device, alphanumeric LC display, operating instructions, handheld programmer, degree of protection IP 67, including mounting bracket made of stainless steel (1.4301), lock nut, supply and mount ready-to-operate.

2.11 One (1) valve for tank emptying by gravity

- manufacturer : GEMAK
- type : gate

2.12 One (1) container for screenings and gravels

- manufacturer : VAN
- type : NM-5V
- capacity : 5m3
- dimensions (W x L x H) : 1700 x 3000 x 1250mm

2.13 One (1) automatic station for receiving septage

- Switchboard with all functions for automatic operation of the unit, identification and registration of customers. The switchboard is equipped with an automatic control device with industrial-protocol communication.
- Registration units for the receiving, allowing documents on the arrival and quantity of discharged wastewater to be printed
- Customers' magnetic cards that control the electromotor knife gate valve (code 2.1), by the evaluation system of the unit (acc. to the wastewater quality) and from the WWTP control system (e.g. reaching the maximum level in the reserve tank)
- One (1) electrically-driven valve – flushing service water piping

3/12/18

2.14 One (1) automatic station for receiving samples of septage

- manufacturer : HACH
- type : AS950

Sampler

Housing material: Impact resistant ABS plastic, 3-section construction Double-walled base with 2.54 cm insulation, direct ice contact with bottles (Sampler)

Temperature: Operating: 0 - 49 °C

Storage: -40 - 60 °C

Power requirements (Voltage): 12 V DC

Dimensions (W x H x D) Standard Base: 50.5 cm x 69.4 cm

Weight Standard: 15 kg with (24) 1 L Polyethylene bottles

Controller

Housing material: PC/ABS blend, NEMA 4X, 6, IP68, corrosion and ice resistant (Controller)

Display: 1/4 VGA, Colour; self-prompting/menu-driven program

User interface: Membrane switch keypad with 2 multiple function soft keys

Languages user interface: English, French, Spanish, Italian, German, Portuguese, Chinese

Lock function: Access code protection prevents tampering

Memory: Sample history: 4000 records;

Data log: 325,000 records;

Event log: 2000 records

Communication capabilities: USB and optional RS485 (MODBUS)

Inputs: One 0/4-20 mA input for flow pacing

Certifications: CE, UL2

Sample container

(24) 1 L Polyethylene bottles

3/12/18

3. PUMPING STATION

3.1 Four (4) penstocks for screens isolation

- manufacturer	: KARKANIAS SA
- dimensions (W x H)	: 800 x 1000 mm
- material	: AISI 304

3.2 One (1) automatic cleaned coarse screen (multi rake)

- manufacturer	: KARKANIAS SA
- capacity	: 130lt/s
- bar spacing (slot width)	: 50mm
- discharge height	: 7,5 m
- channel width	: 800mm
- material	: AISI 304
- power	: 2,2KW
- electrical connections	: 400V, 50Hz

3.3 One (1) manual cleaned coarse screen, standby

- manufacturer	: KARKANIAS SA
- capacity	: 130lt/s
- bar spacing (slot width)	: 50mm
- width	: 800 mm
- material	: AISI 304

3.4 One (1) screw conveyor for screenings

- manufacturer	: KARKANIAS SA
- type	: SC
- power	: 0,55KW
- electrical connections	: 400V, 50Hz
- trough material	: AISI304
- screw material	: S355

3/12/18

3.5 One (1) ultrasonic differential level meter

- manufacturer : SIEMENS
- type : Sitrans L HydroRanger 200
  Echomax XRS 5 (sensor)

Ultrasonic transducer with 2 ultrasonic sensors, for contactless measurement of fill levels, distances, flows, volumes, and tendencies on rakes, as well as in open sluices, channels or dams, differential measurement, plus alternating pump control of at least 6 pumps in pumping shafts. Preprogrammed arithmetic operations for linearization of venturi sluices, rectangular sluices, overfall or V dams and half shells. Determination of volume as well as control of rainwater, vent pumps and flushing dumps, programming of one universal trace with at least 32 supporting points. Profibus DP communication, dynamic envelope curve adaptation for echo analysis, automatic suppression of interfering echo, input 0 – 20 mA and 4 – 20 mA, output 0 – 20 mA and 4 – 20 mA, load 750 ohm, 6 relays, rated power 5 A at 250 V AC, 2 normally open contacts, 1 changeover contact, accuracy 0.25 % of MR, ambient temperature -20 – +50 °C, field enclosure degree of protection IP 65, display 100 mm x 40 mm LCD with backlighting, auxiliary power 24 V DC.

Two separate measuring points at a distance of at least 10 m, measuring range 0.3 – 8 m, beam angle 10°, frequency 44 kHz, integrated temperature compensation, IP 68, with approval according to ATEX II 2 G of the sensors, including mounting bracket made of stainless steel (1.4301), operating instructions, supply and mount ready-to-operate.

3.6 One (1) container for screenings

- manufacturer : VAN
- type : NM-5V
- capacity : 5m3
- dimensions (W x L x H) : 1700 x 3000 x 1250mm

3.7 One (1) screenings container chassis with electric drive

- manufacturer : KARKANIAS SA
- loading capacity : 9tn

3/12/18

3.8 Three (3) submersible pumps in pumping station, one standby

- manufacturer	: WILO
- type	: Rexa PRO C08 DA-435 / EAD1X2-T0039-540-O
- flow	: 51,4m3/h
- head	: 15,6m
- speed	: 2879rpm
- rated power	: 3,9 KW
- power input (duty point)	: 3,8 KW
- maximum power input	: 4,85 KW
- electrical connections	: 400V, 50Hz

3.9 Three (3) frequency converters (inverters) for pumps

- manufacturer	: SIEMENS
- type	: SINAMICS G120C
- power	: 5,5KW

3.10 One (1) electromagnetic inductive flow meter on pumping discharge pipe

- manufacturer	: SIEMENS
- type	: Sitrans F M MAG 5100 W (sensor)
	: Sitrans F M MAG 5000

Flow sensor

Flowmeter for water and wastewater treatment plants for compact or separate transmitter. NBR hard rubber lining, integrated grounding and measuring electrodes made of Hastelloy C, flange size according to EN 1092-1, ambient temperature -40 – +70 °C, temperature of medium -10 – +70 °C, flange and flowmeter housing made of painted steel, terminal box with cable gland M20, flash memory to save calibration, verification data of sensor, and save customer-specific settings, degree of protection IP 67, approvals PED-97/23EG, removable part as spare, supply and mount ready-to-operate.

Transmitter

Microprocessor-controlled transmitter in compact or offset design in glass fibre-reinforced polyamide housing with backlight, three-line, alphanumeric display for flow, counter for forward, reverse or net flow, indication of flow direction, comprehensive self-diagnostics for error signalling and recording. Keypad with display unit, leak flow volume suppression, measuring principle with constant field pulsing, automatic zero adjustment, flash memory for automatic recording of calibration and verification data of sensor data as well as customer specific settings, measuring error 0.4 %, simultaneous utilization of analog output 0/4 – 20 mA, pulse output, digital input and output, relay output 24 V DC/1 A, as well as electrical isolation of inputs and outputs. Ambient temperature -20 - +60 °C, power supply 24 V DC, degree of protection IP 67, supply and mount ready-to-operate.

3/12/18

3.11 One (1) ultrasonic level meter

- manufacturer : SIEMENS
- type : Sitrans Probe LU

Ultrasonic transducer with 2-wire technology, for detecting the level and volume of liquids and sludge, continuous measuring from 0.3 to 6 m, frequency 54 kHz, communication over 4 – 20 mA / HART, dynamic envelope adjustment for echo analysis, autom. suppression of interfering echo, ambient temperature -40 – +80 °C, integrated temperature compensation, sensor material PVDF copolymer, plastic housing, cable entry 2x M20 x 1.5, process connection screw thread G 2", EEPROM, programming via infrared receiver without opening the device, alphanumeric LC display, operating instructions, handheld programmer, degree of protection IP 67, including mounting bracket made of stainless steel (1.4301), lock nut, supply and mount ready-to-operate.

3.12 One (1) lifting device (monorail) for pumping station

- manufacturer : KARKANIAS SA
- material : st37
- lifting capacity : 500kg

3.13 One (1) scum diaphragm for floating substances

- manufacturer : KARKANIAS SA
- material : AISI 304

3.14 One (1) penstocks

- manufacturer : KARKANIAS SA
- dimensions (W x H) : 800 x 800 mm
- material : AISI 304

3/12/18

4. MECHANICAL WASTEWATER PRETREATMENT UNIT

4.1 Two (2) valves on by pass pipeline and inlet pipeline

- manufacturer : GEMAK
- type : gate

4.2 One (1) compact mechanical pretreatment unit

- manufacturer : SEFT
- type : GDF / D30 - FCP/C50
- flow : 30lt/sec
- screenings weight and volume reduction : ≥30-40%
- efficiency for sand removal (particles>200μm) and density above 1,65 Kg/dm3 : ≥90%

Screw screen FCP/C 50 with compaction

- Loading basket diameter: Ø456 mm
- Screw diameter for transport / compaction: Ø219 mm
- Filtration type: rounded holes
- Dimension: Ø6 mm
- Inclination: 35°
- Squared outlet spout for screening discharge
- Basket cleaning through nylon bolted brushes
- Motor 1,1 kW, 400V – 50Hz – 3 phases, 4 poles, IP55, F class
- Gear reducer, endless screw, 11 rpm

Sand settling tank

Horizontal screw conveyor and sand transport mod. TSA 200

- Shaft less screw diameter: Ø180mm
- High carbon steel single profile, pitch 1/1, thick. 20mm
- With mechanical water tight group
- Motor 0,55 kW, 400V – 50Hz – 3 phases, 4 poles, IP55, F class
- Gear reducer, endless screw, 5 rpm

3/12/18

Sand extraction screw conveyor mod. TSA"T" 168

- Shaft less screw diameter: Ø168mm
- High carbon steel single profile, pitch 1/1, thick. 20mm
- With mechanical water tight group
- Motor 0,37 kW, 400V – 50Hz – 3 phases, 4 poles, IP55, F class
- Gear reducer, endless screw, 5 rpm

Air blowing system

Electrical Blower

Flow rate: 25 m3/h

Pressure: 150 mbar

Motor: 0,25 kW, 380V, 50hz, 3phases, IP55 grade, F class

1" fitting

Side installation, with stainless steel hoses

Retention valve, Suction filter, Pressure valve

Wiring and installation included

Grease / Oil removal "go & back carriage" system

Motor 0,37 kW, 400V – 50Hz – 3 phases, 4 poles, IP55, F class

External structure in stainless steel AISI316 L

Tanks in stainless steel AISI316 L

Shaft less spirals in high carbon steel painted RAL6029

Bolts in A2

Anti-wear material: bolted plates in stainless steel AISI316 L

Inlet: alum. DN250 PN10

Outlet: alum. DN250 PN10

Degreasing outlet: Flanged alum. DN100 PN10

Overall dimensions:

Total length: 6955 mm

Settling tank length: 6.000 mm

Total width: 1.420 mm

Total height after installation: 3.055 mm

3/12/18

Grease Pump

Manufacturer: SYDEX

Flow rate: 400 lt/h (90rpm)

Pressure: 4 bar

Motor: 1,1 kW, 2,45A, 380V, 50hz, 3phases, IP55

Control panel

PLC Protection degree IP65, 400 V

In fiberglass with buttons at sight + Emergency button

Manual start/stop and automatic cycle start/stop selectors

Warning lights for: line presence, machine running, thermal alarm

Documentation: control panel electrical diagram + CE conformity declaration

Predisposition for remote control for start/stop with thermal alarm signal

Wiring included

Ventilation (if necessary)

Heating included

Consumption and working hours

Communication card for industrial protocol included

4.3 Four (2+2) containers for screenings and sand

- manufacturer	: VAN
- type	: NM-5V
- capacity	: 5m3
- dimensions (W x L x H)	: 1700 x 3000 x 1250mm

4.4 One (1) screenings container chassis with electric drive

- manufacturer	: KARKANIAS SA
- loading capacity	: 9tn

4.5 One (1) sand container chassis with electric drive

- manufacturer	: KARKANIAS SA
- loading capacity	: 9tn

3/12/18

5. BIOLOGICAL TREATMENT PROCESS

5.1 FLOW DISTRIBUTION CHAMBER I

5.1.1 One (1) overflow weir for flow distribution

- manufacturer	: KARKANIAS SA
- material	: AISI 304

5.1.2 One (1) valve on pipeline

- manufacturer	: GEMAK
- type	: gate

5.1.3 One (1) overflow telescopic valve for by pass

- manufacturer	: KARKANIAS SA
- material	: AISI 304

5.2 PREDENITRIFICATION TANK

5.2.1 One (1) submersible mixer with lifting device in the predenitrification tank

- manufacturer	: WILO
- type	: TR 50-2.34-4/12 S
- propeller diameter	: 500mm
- propeller speed	: 338rpm
- rated power	: 4,5 KW
- power input (duty point)	: 4,4 KW
- maximum power input	: 5,8 KW
- electrical connections	: 400V, 50Hz

3/12/18

5.3 CIRCULATING ACTIVATED SLUDGE TANK

5.3.1 Two (2) submersible mixers with lifting devices, one per corridor

- manufacturer	: XYLEM
- type	: SR 4410 400
- propeller diameter	: 2500mm
- propeller speed	: 27rpm
- rated power	: 2,3 KW
- power input (duty point)	: 1,78 KW
- maximum power input	: 3,10 KW
- electrical connections	: 400V, 50Hz

5.3.2 Two (2) rotary lobe blowers for aeration, one standby, with noise cover

- manufacturer	: ROBUSCHI
- type	: ES65/2P
- flow	: 776Nm3/h
- differential pressure	: 620mbar
- blower speed	: 3366rpm
- motor speed	: 2945rpm
- Absorbed power	: 22 KW
- Input power	: 30 KW
- electrical connections	: 400V, 50Hz
- sound pressure level	: 74dBA

5.3.3 Two (2) frequency converters (inverters) for blowers

- manufacturer	: SIEMENS
- type	: SINAMICS G 120C
- power	: 30KW

5.3.4 One (1) lifting device (monorail) for blowers

- manufacturer	: KARKANIAS SA
- lifting capacity	: 1000kg

3/12/18

5.3.5 One (1) fan for ventilation of blowers building

- manufacturer	: Soler & Palau (S&P)
- type	: HCFT/4-400/H
- flow	: 5070 m3/hr
- speed	: 1350 rpm
- power	: 300W
- electrical connections	: 400V, 50Hz

5.3.6 One (1) main air pipeline

- manufacturer	: KARKANIAS SA
- material	: AISI 304
- diameter	: DN150

5.3.7 Two (2) air distribution pipes with batterfly valves for flow control or isolation

- manufacturer	: KARKANIAS SA / EFFEBI
- material	: AISI 304
- diameter	: DN100

5.3.8 Two (2) air grids for diffusers

- manufacturer	: KARKANIAS SA
- material	: PVC, 10atm
- diameter	: Φ110

5.3.9 One hundred and ninety two (192) fine bubble membrane diffusers (disc type), ninety six per grid

- manufacturer	: XYLEM / SANITAIRE
- material	: EPDM
- diameter	: 229mm
- flow (duty point)	: 4,03m3/h
- efficiency	: 31%

5.3.10 One (1) overflow weir

- manufacturer	: KARKANIAS SA
- material	: AISI 304

3/12/18

5.3.11 One (1) dissolved oxygen meter

- manufacturer : HACH
- type : SC1000/ LDO sc

Digital Controller SC1000 (consisting of probe module and retractable digital display)
Connection with 4 digital Hach sc probes
Operating Temperature Range: -20 to 55 °C, 0 to 95% relative humidity, non-condensing
Storage Conditions: -20 to 70 °C, 0 to 95% relative humidity, non-condensing
Power Requirements (Voltage): 100 - 240 V AC, 24 V DC
Power Requirements (Hz): 50/60 Hz
Display: 1/4 inch VGA graphical backlit TFT color Glas/Glas-Touch screen, high resistance, 320 x 240 pixels
Display Viewing Area: 11.4 x 8.6 cm (4.5 x 3.4 in)
Alarm: Low alarm point, low alarm point deadband, high alarm point, high alarm point deadband, off delay, and on delay
Relays: Up to four SPDT, user-configurable contacts rated 100 to 230 VAC, 5 Amp resistive maximum per probe module. Additional relays are available with additional probe modules.
Inputs: Up to 12 analog 0-20 mA, maximum impedance 500 Ohms per probe module. Additional analog inputs are available with additional probe modules.
Outputs: Up to 12 analog 0/4-20 mA, maximum impedance 500 Ohms per probe module. Additional analog outputs with additional probe modules. Optional digital communcations via Modbus® (RS485) and Profibus® DP/V1.
Communication: Modbus® (RS485): Advanced communications/networking with PLC or SCADA system directly from analyzer
Profibus® DP/V1 (certified)
GSM/GPRS Quad-band cellular module (FCC and IC approved, EU and US only)
Ethernet service port, RJ45, 10 MB/s
Mounting Configurations: Surface, panel, and pipe (horizontal and vertical) with optional sun shield
Enclosure Rating: IP65
Material Enclosures: ABS (display module) and metal (probe module) enclosure with corrosion resistant finish
Dimensions Metric (H x W X D): 150 mm x 315 mm x 250 mm
European Certifications: CE per 73/23/EEC and 89/336/EEC
TUV-GS to EN 61010-1
EN 61326 Amd's 1 & 2

3/12/18

Sensor (LDO sc)

Dimensions (D x L): 48.25mm x 254mm

Response time: T90 < 40 s

T95 < 60 s

Flow rate: No flow rate required

Resolution: 0.01 mg/L (ppm) O2/0.1% saturation

Operating temperature: 0 to 50 °C

Pressure range: max. 10 bar

Weight: 1.0 kg

Interferences No interferences by: H2S, pH, K^+, Na^+, Mg^{2+}, Ca^{2+}, $NH4^+$, Al^{3+}, Pb^{2+}, Cd^{2+}, Zn^{2+}, Cr (total), Fe^{2+}, Fe^{3+}, Mn^{2+}, Cu^{2+}, Ni^{2+}, Co^{2+}, CN^-, $NO3^-$, $SO4^{2-}$, S^{2-}, $PO4^{3-}$, Cl^- anionic surfactants, crude oils or Cl2 < 4ppm

Cable length: 10 m

Storage temperature: -20 to 70 °C (95% relative humidity)

Materials Sensor cap: acrylic

Probe body: CPVC, polyurethane, viton, noryl, stainless steel 1.4404 (AISI 316L)

Measuring range: 0 to 20.00 mg/L (ppm) DO, 0 to 200% saturation

Accuracy: Below 5 mg/L O2 0.1 mg/L

Above 5 mg/L O2 0.2 mg/L

Enclosure rating: IP 68

Sensor connector: 1 " NPT external thread

Temperature accuracy: 0.2 °C

Repeatability: 0.1 mg/L

3/12/18

5.3.12 One (1) MLSS meter

- manufacturer	: HACH
- type	: Solitax sc ts-line
- parameters	: Suspended Solids/ turbidity
- measurement procedure	: Solids - Equivalent to DIN 37414 Turbidity DIN EN ISO 7027 DIN EN ISO 7027
-measuring range	: Solids: 0.001 - 50 g/l Turbidity: 0.001 - 4,000 FNU
-accuracy	: Solids - <5% Turbidity <1% or 0.001
- response time	: 1 - 300 sec
- sample temperature	: 0 - 40 °C
- flow rate	: 3 m/s
- immersion depth	: 0.1 - 10 m
- pressure range	: 1 bar
- dimensions (D x L)	: 60 x 200 mm
- housing	: stainless steel
- automatic Cleaning	: With automatic wiper
- cable length	: 10 m fixed, max. 100 m extension cable

5.3.13 One (1) mixer (vertical shaft) in outlet manhole of the tank

- manufacturer	: KARKANIAS SA
- material	: AISI 304
- propeller speed	: 49rpm
Gearmotor	
- manufacturer	: BONFIGLIOLI
- type (gear / motor)	: VF49_28 / P71 BN71B4
- motor speed	: 1400rpm
- power	: 0,37KW
- electrical connections	: 400V, 50Hz

3/12/18

5.4 FLOW DISTRIBUTION CHAMBER II

5.4.1 One (1) overflow weir for flow distribution

- manufacturer : KARKANIAS SA
- material : AISI 304

5.4.2 One (1) valve on pipeline

- manufacturer : GEMAK
- type : gate

5.4.3 One (1) overflow telescopic valve for by pass

- manufacturer : KARKANIAS SA
- material : AISI 304

5.5 FINAL SETTLING TANK

5.5.1 One (1) rotated radial bridge with bottom and surface scrapers

- manufacturer : KARKANIAS SA
- material (scrapers and all submerged parts) : AISI 304
- material (bridge) : hot-dip galvanized steel
- bridge width : 800mm

Gearmotor

- manufacturer : BONFIGLIOLI
- type (gear / motor) : MVF44_86FC_700 / P71 BN71B4
- motor speed : 1400rpm
- power : 0,37KW
- electrical connections : 400V, 50Hz, IP55

5.5.2 One (1) scum skimmer

- manufacturer : KARKANIAS SA
- material : AISI 304

5.5.3 One (1) influent well

- manufacturer : KARKANIAS SA
- material : AISI 304
- dimensions (D x H) : 2500 x 1250 mm

3/12/18

5.5.4 One (1) circumferential overflow weir (V- notch)

- manufacturer	: KARKANIAS SA
- material	: AISI 304
- V dimensions (length x depth x pitch)	: 100 x 50 x 150 mm
- height	: 250 mm

5.5.5 One (1) circumferential scum diaphragm

- manufacturer	: KARKANIAS SA
- material	: AISI 304
- height	: 400 mm

5.6 RETURN ACTIVATED SLUDGE AND EXCESS SULDGE PUMPING STATION

5.6.1 Two (2) submersible pumps for return sludge, one standby

- manufacturer	: WILO
- type	: Rexa PRO C10 DA-518/ EAD0X4-T0035-540-O
- flow	: 99,8m3/h
- head	: 7,7m
- speed	: 1393rpm
- rated power	: 3,45 KW
- power input (duty point)	: 3,75 KW
- maximum power input	: 4,45 KW
- electrical connections	: 400V, 50Hz

5.6.2 Two (2) frequency converters (inverters) for return sludge pumps

- manufacturer	: SIEMENS
- type	: SINAMICS G 120C
- power	: 5,5KW

3/12/18

5.6.3 One (1) electromagnetic inductive flow meter for return sludge

- manufacturer : SIEMENS
- type : Sitrans F M MAG 5100 W (sensor)
  : Sitrans F M MAG 5000

Flow sensor

Flowmeter for water and wastewater treatment plants for compact or separate transmitter. NBR hard rubber lining, integrated grounding and measuring electrodes made of Hastelloy C, flange size according to EN 1092-1, ambient temperature -40 – +70 °C, temperature of medium -10 – +70 °C, flange and flowmeter housing made of painted steel, terminal box with cable gland M20, flash memory to save calibration, verification data of sensor, and save customer-specific settings, degree of protection IP 67, approvals PED-97/23EG, removable part as spare, supply and mount ready-to-operate.

Transmitter

Microprocessor-controlled transmitter in compact or offset design in glass fibre-reinforced polyamide housing with backlight, three-line, alphanumeric display for flow, counter for forward, reverse or net flow, indication of flow direction, comprehensive self-diagnostics for error signalling and recording. Keypad with display unit, leak flow volume suppression, measuring principle with constant field pulsing, automatic zero adjustment, flash memory for automatic recording of calibration and verification data of sensor data as well as customer specific settings, measuring error 0.4 %, simultaneous utilization of analog output 0/4 – 20 mA, pulse output, digital input and output, relay output 24 V DC/1 A, as well as electrical isolation of inputs and outputs. Ambient temperature -20 - +60 °C, power supply 24 V DC, degree of protection IP 67, supply and mount ready-to-operate.

5.6.4 One (1) ultrasonic level meter

- manufacturer : SIEMENS
- type : Sitrans Probe LU

Ultrasonic transducer with 2-wire technology, for detecting the level and volume of liquids and sludge, continuous measuring from 0.3 to 6 m, frequency 54 kHz, communication over 4 – 20 mA / HART, dynamic envelope adjustment for echo analysis, autom. suppression of interfering echo, ambient temperature -40 – +80 °C, integrated temperature compensation, sensor material PVDF copolymer, plastic housing, cable entry 2x M20 x 1.5, process connection screw thread G 2", EEPROM, programming via infrared receiver without opening the device, alphanumeric LC display, operating instructions, handheld programmer, degree of protection IP 67, including mounting bracket made of stainless steel (1.4301), lock nut, supply and mount ready-to-operate.

5.6.5 Two (2) lifting devices (davit) for pumps, one for excess sludge pumps and one for return sludge pumps

- manufacturer : KARKANIAS SA
- material : st37
- lifting capacity : 250kg

3/12/18

5.6.6 Two (2) submersible pumps for excess sludge, one standby

- manufacturer	: WILO
- type	: Rexa PRO V05 DA-222/ EAD1X2-T0025-540-O
- flow	: 26,1m3/h
- head	: 10,1m
- speed	: 2848rpm
- rated power	: 2,5 KW
- power input (duty point)	: 2,2 KW
- maximum power input	: 3,2 KW
- electrical connections	: 400V, 50Hz

5.6.7 Two (2) frequency converters (inverters) for excess sludge pumps

- manufacturer	: SIEMENS
- type	: SINAMICS G 120C
- power	: 4KW

5.6.8 One (1) electromagnetic inductive flow meter for excess sludge

- manufacturer	: SIEMENS
- type	: Sitrans F M MAG 5100 W (sensor)
	: Sitrans F M MAG 5000

Flow sensor

Flowmeter for water and wastewater treatment plants for compact or separate transmitter. NBR hard rubber lining, integrated grounding and measuring electrodes made of Hastelloy C, flange size according to EN 1092-1, ambient temperature -40 – +70 °C, temperature of medium -10 – +70 °C, flange and flowmeter housing made of painted steel, terminal box with cable gland M20, flash memory to save calibration, verification data of sensor, and save customer-specific settings, degree of protection IP 67, approvals PED-97/23EG, removable part as spare, supply and mount ready-to-operate.

Transmitter

Microprocessor-controlled transmitter in compact or offset design in glass fibre-reinforced polyamide housing with backlight, three-line, alphanumeric display for flow, counter for forward, reverse or net flow, indication of flow direction, comprehensive self-diagnostics for error signalling and recording. Keypad with display unit, leak flow volume suppression, measuring principle with constant field pulsing, automatic zero adjustment, flash memory for automatic recording of calibration and verification data of sensor data as well as customer specific settings, measuring error 0.4 %, simultaneous utilization of analog output 0/4 – 20 mA, pulse output, digital input and output, relay output 24 V DC/1 A, as well as electrical isolation of inputs and outputs. Ambient temperature -20 - +60 °C, power supply 24 V DC, degree of protection IP 67, supply and mount ready-to-operate.

3/12/18

5.6.9 One (1) valve on sludge pipeline

- manufacturer	: GEMAK
- type	: gate

5.7 CHEMICAL PHOSPHORUS PRECIPITATION

5.7.1 Three (3) dosing (diaphragm) pumps for phosphorus precipitation chemical solution, one standby, with pipes and valves

- manufacturer	: GRUNDFOS
- type	: DDA30-4
- flow	: 30lt/h
- pressure	: 4bar
- power	: 24W
- electrical connections	: 240V, 50Hz, IP65
- dosing head material	: PVC (Polyvinyl chloride)
- valve ball material	: Ceramic
- gasket material	: FKM
- analog control 0/4-20 mA (scalable)	

5.7.2 One (1) electromagnetic inductive flow meter for phosphorus precipitation chemical solution

- manufacturer	: SIEMENS
- type	: Sitrans F M MAG 5100 W (sensor)
	: Sitrans F M MAG 5000

Flow sensor

Flowmeter for water and wastewater treatment plants for compact or separate transmitter. NBR hard rubber lining, integrated grounding and measuring electrodes made of Hastelloy C, flange size according to EN 1092-1, ambient temperature -40 – +70 °C, temperature of medium -10 – +70 °C, flange and flowmeter housing made of painted steel, terminal box with cable gland M20, flash memory to save calibration, verification data of sensor, and save customer-specific settings, degree of protection IP 67, approvals PED-97/23EG, removable part as spare, supply and mount ready-to-operate.

Transmitter

Microprocessor-controlled transmitter in compact or offset design in glass fibre-reinforced polyamide housing with backlight, three-line, alphanumeric display for flow, counter for forward, reverse or net flow, indication of flow direction, comprehensive self-diagnostics for error signalling and recording. Keypad with display unit, leak flow volume suppression, measuring principle with constant field pulsing, automatic zero adjustment, flash memory for

3/12/18

automatic recording of calibration and verification data of sensor data as well as customer specific settings, measuring error 0.4 %, simultaneous utilization of analog output 0/4 – 20 mA, pulse output, digital input and output, relay output 24 V DC/1 A, as well as electrical isolation of inputs and outputs. Ambient temperature -20 - +60 °C, power supply 24 V DC, degree of protection IP 67, supply and mount ready-to-operate.

5.7.3 One (1) double-walled reservoir for phosphorus precipitation chemical solution, with three level switches

- capacity	: 10.000lt
- material	: HDPE
- dimensions (D x H)	: 2400 x 2800 mm

5.7.4 Two (2) pumps (magnetic driven, plastic, centrifugal) for chemical solution, one standby

- manufacturer	: MPumps
- type	: CM MAG P15
- flow	: 15m3/h
- manometric height	: 12m
- speed	: 2900rpm
- power	: 1,1KW
- electrical connections	: 400V, 50Hz, IP55
- material (body, cover, impeller)	: Polypropylene

3/12/18

6. FILTRATION UNIT

6.1 One (1) overflow penstock for filter tank flow distribution and isolation

- manufacturer : KARKANIAS SA
- dimensions (W x H) : 800 x 500 mm
- material : AISI 304

6.2 One (1) penstock for bypass

- manufacturer : KARKANIAS SA
- dimensions (W x H) : 500 x 500 mm
- material : AISI 304

6.3 One (1) automatic cleaned microscreen rotary drum filter for wastewater tertiary treatment

- manufacturer : IN EKO Team sro
- type : 3FBB
- flow : max 50lt/sec
- overall filtration surface : 3,75m2
- active filtration surface : 2,39m2
- power : 2,37KW
- electrical connections : 400V, 50Hz
- filtration cloth pores (size of mesh) : 40μm
- filtration cloth material : polyamid
- filter material (frame) : AISI 304

<u>drum dimensions</u>

- diameter : 930mm
- length : 1500mm

<u>Tank dimensions</u>

- width : 1150m
- length : 2800m
- height : 1250m

3/12/18

- level switches (3items)
- control cabinet (1item)
- backwashing system
- washing pump (1item)
- drainage (sludge) pump (1item)

Outlet overflow weir

- material : AISI 304

3/12/18

7. UV DISINFECTION UNIT - EFFLUENT

7.1 Two (2) overflow penstocks for UV channel isolation

- manufacturer	: KARKANIAS SA
- dimensions (W x H)	: 612 x 600 mm
- material	: AISI 304

7.2 One (1) UV disinfection automatic cleaned system

- manufacturer	: ULTRAQUA
- type	: MR16-220SS channel
- flow	: 108m3/h (30lt/sec)
- design UV transmittance pr 10 mm, UVT	: 70%
- design UV dose, EOLL	: > 85 mJ/cm2
- calculated UV dose, EOLL	: 86,3 mJ/cm2
- wastewater temperature	: 5 - 35 °C
- fecal Coliforms (F.C.) UV inlet	: 100.000 CFU/100ml
- fecal Coliforms (F.C.) UV outlet	: ≤ 20 CFU/100ml (95% of samples)
- number of UV-lamps	: 16
- reactor material	: AISI316L
- minor parts materials	: PTFE/PVDF/VITON/POM
- water depth	: 1120-1400mm (vertical)
- channel width	: 604 +/-8,0mm
- reactor configuration	: 1 bank with 16 lamps
- lamp type	: low pressure high output amalgam
- lamp life time	: 16000 h
- wire coating	: PTFE
- lamp power pr. Lamp	: 220W
- power	: 3,8 kW
- temperature sensor	: Danfoss pT100

Outlet overflow weir

- material	: AISI 304

3/12/18

Lamp drivers (ballasts)	
no of drivers pr. system	4
product	4x220W UltraAqua 220W series
type	electronic HF modbus controlled
serial communication	modbus Daisy chain RJ45 wiring
power Factor	> 0.98
efficiency	95% at nominal power
continuous monitoring	individual electrical lamp parameters
protection	ground fault, temperature, input voltage
On-board diagnosis	LED indicators
Manufactured in	Holland

Control cabinet	
Material	GFRP (optional Stainless steel AISI304)
HMI	3.4" touch sensitive menu driven screen
System control	PLC
Installation	Wall mount
Cabinet dimension	700x500x300mm
Lamp cable length	5,0m (max length 30,0m)
Lamp cable type	Silicon acc.UL Style 4476 and CSA AWM II A/B
Power supply	3x400VAC+N+Pe,47-63 Hz
Power	3,9 kW @ 100% power level
Temperature	0-45 °C
Thermal control	Forced cooling
Rel. humidity	20-95% non-condensing
Enclosure type	IP54 (Optional IP55-IP68)
Approval	CE
Manufactured in	Denmark

3/12/18

7.3 One (1) ultrasonic flow meter with parshall flume

- manufacturer : SIEMENS
- type : Sitrans LUT 430 (transducer)
  Echomax XRS 5 (sensor)

Ultrasonic transducer with ultrasonic sensor for contactless measurement of fill levels, distances, volumes, flow rates, tendencies or quantities in open sluices, channels or dams with energy saving algorithms and time to spill calculation, preprogrammed arithmetic operations for linearization of Parshall sluices, rectangular sluices, overfall or V dams and half shells, determination of volume as well as control of rainwater, vent pumps and flushing dumps, programming of one universal trace with 40 supporting points, programming by means of local push buttons or EDD or DTM based software, dynamic envelope curve adaptation for echo analysis, automatic suppression of interfering echo, HART communication, data logging, power supply 100 - 230 V AC, output 4 mA – 20 mA, load 600 ohm, 3 relays rated power 5 A at 250 V AC, 2 normally open contacts, 1 changeover contact, accuracy 0.17 %, field enclosure degree of protection IP 65, ambient temperature -20 – +50 °C, LCD display 60 mm x 40 mm with backlighting, parameter backup capability,

Ultrasonic sensor with connecting cable 10 m, measuring range 0.3 – 8 m, beam angle 10°, measuring frequency 44 kHz, degree of protection IP65/IP68, approval according to CE, FM, CSA(US/C), UL, C-TICK, integrated temperature compensation, ambient temperature -20 – +50°C, including operating instructions, mounting material, supply and mount ready-to-operate.

7.4 One (1) automatic station for receiving treated wastewater samples

- manufacturer : HACH
- type : AS950

Sampler

Housing material: Impact resistant ABS plastic, 3-section construction Double-walled base with 2.54 cm insulation, direct ice contact with bottles (Sampler)

Temperature: Operating: 0 - 49 °C
Storage: -40 - 60 °C

Power requirements (Voltage): 12 V DC

Dimensions (W x H x D) Standard Base: 50.5 cm x 69.4 cm

Weight Standard: 15 kg with (24) 1 L Polyethylene bottles

Controller

Housing material: PC/ABS blend, NEMA 4X, 6, IP68, corrosion and ice resistant (Controller)

Display: 1/4 VGA, Colour; self-prompting/menu-driven program

User interface: Membrane switch keypad with 2 multiple function soft keys

Languages user interface: English, French, Spanish, Italian, German, Portuguese, Chinese

Lock function: Access code protection prevents tampering

Memory: Sample history: 4000 records;

3/12/18

Data log: 325,000 records;

Event log: 2000 records

Communication capabilities: USB and optional RS485 (MODBUS)

Inputs: One 0/4-20 mA input for flow pacing

Certifications: CE, UL2

Sample container

(24) 1 L Polyethylene bottles

7.5 One (1) submersible pump for service water tank

- manufacturer	: WILO
- type	: Rexa PRO V05 DA-222/ EAD1X2-T0025-540-O
- flow	: 12,8m3/h
- head	: 13,8m
- speed	: 2848rpm
- rated power	: 2,5 KW
- power input (duty point)	: 1,6 KW
- maximum power input	: 3,2 KW
- electrical connections	: 400V, 50Hz

7.6 Three (3) level switches for submersible pump operation

7.7 One (1) lifting device for submersible pump

- manufacturer	: KARKANIAS SA
- material	: st37
- lifting capacity	: 250kg

7.8 One (1) overflow weir in UV outlet manhole

- manufacturer	: KARKANIAS SA
- material	: AISI 304

3/12/18

8. SLUDGE TREATMENT UNITS

8.1 SLUDGE AEROBIC STABILISATION AND THICKENING TANK

8.1.1 One (1) submersible mixer with lifting device

- manufacturer	: WILO
- type	: TR 36.145-4/12 S17
- propeller diameter	: 250mm
- propeller speed	: 1400rpm
- rated power	: 4,5 KW
- power input (duty point)	: 4,95 KW
- maximum power input	: 5,8 KW
- electrical connections	: 400V, 50Hz

8.1.2 One (1) submersible jet aerator, with one extra pump stock

- manufacturer	: WILO
- type	: J- OXY 250 2/150/95 35(50) Pump FA 20.54E T24 - 4/29K
- air flow	: 620Nm3/hr
- sludge height	: 4,5m
- speed	: 1450rpm
- power	: 25KW
- electrical connections	: 400V, 50Hz
- jet diameter	: 2 * DN150

8.1.3 One (1) ultrasonic level meter

- manufacturer : SIEMENS
- type : Sitrans Probe LU

Ultrasonic transducer with 2-wire technology, for detecting the level and volume of liquids and sludge, continuous measuring from 0.3 to 6 m, frequency 54 kHz, communication over 4 – 20 mA / HART, dynamic envelope adjustment for echo analysis, autom. suppression of interfering echo, ambient temperature -40 – +80 °C, integrated temperature compensation, sensor material PVDF copolymer, plastic housing, cable entry 2x M20 x 1.5, process connection screw thread G 2", EEPROM, programming via infrared receiver without opening the device, alphanumeric LC display, operating instructions, handheld programmer, degree of protection IP 67, including mounting bracket made of stainless steel (1.4301), lock nut, supply and mount ready-to-operate.

3/12/18

8.1.4 Three (3) level switches

8.1.5 One (1) lifting device for jet aerator

- manufacturer	: KARKANIAS SA
- material	: st37
- lifting capacity	: 500kg

8.1.6 Two (2) drainage overflow pipes with gate valves

- manufacturer (pipe / valve)	: KARKANIAS SA / GEMAK
- pipe material	: AISI 304

8.1.7 Two (2) progressing cavity (screw) sludge pumps for feeding holding tank, one standby, with overpressure protection and dry run protection

- manufacturer	: NOV PROCESS (MONO PUMPS)
- type	: C14KC11RMA
- flow	: 6m3/h
- pressure	: 6bar
- speed	: 226rpm
- power	: 3 KW
- electrical connections	: 400V, 50Hz, IP55
- body suction chamber	: CAST IRON-BS EN 1561-EN-GJL-HB195
- stator	: NBR
- rotor	: ALLOY STEEL - ASTM A322 - GRADE 4110
- shaft	: STAINLESS STEL - BS EN 10088-3 GRADE X2CrNi18-9, 1.4307

8.1.8 Two (2) frequency converters (inverters) for sludge pumps

- manufacturer	: SIEMENS
- type	: SINAMICS G 120C
- power	: 3KW

3/12/18

8.2 SLUDGE HOLDING TANK

8.2.1 One (1) submersible mixer with lifting device

- manufacturer	: WILO
- type	: TR 21.145-4/11 S14
- propeller diameter	: 210mm
- propeller speed	: 1390rpm
- rated power	: 1,3 KW
- power input (duty point)	: 1,2 KW
- maximum power input	: 1,74 KW
- electrical connections	: 400V, 50Hz

8.3 SLUDGE MECHANICAL DEWATERING UNIT

8.3.1 Two (2) progressing cavity (screw) sludge pumps for decanter feeding, one standby, with overpressure protection

- manufacturer	: NOV PROCESS (MONO PUMPS)
- type	: C14KC11RMA
- flow	: 6m3/h
- pressure	: 3bar
- speed	: 219rpm
- power	: 2,2 KW
- electrical connections	: 400V, 50Hz, IP55
- body suction chamber	: CAST IRON-BS EN 1561-EN-GJL-HB195
- stator	: NBR
- rotor	: ALLOY STEEL - ASTM A322 - GRADE 4110
- shaft	: STAINLESS STEL - BS EN 10088-3 GRADE X2CrNi18-9, 1.4307

8.3.2 Two (2) frequency converters (inverters) for sludge pumps

- manufacturer	: SIEMENS
- type	: SINAMICS G 120C
- power	: 2,2KW

3/12/18

8.3.3 One (1) electromagnetic inductive flow meter for stabilized/thickened sludge

- manufacturer : SIEMENS
- type : Sitrans F M MAG 5100 W (sensor)
  : Sitrans F M MAG 5000

Flow sensor

Flowmeter for water and wastewater treatment plants for compact or separate transmitter. NBR hard rubber lining, integrated grounding and measuring electrodes made of Hastelloy C, flange size according to EN 1092-1, ambient temperature -40 – +70 °C, temperature of medium -10 – +70 °C, flange and flowmeter housing made of painted steel, terminal box with cable gland M20, flash memory to save calibration, verification data of sensor, and save customer-specific settings, degree of protection IP 67, approvals PED-97/23EG, removable part as spare, supply and mount ready-to-operate.

Transmitter

Microprocessor-controlled transmitter in compact or offset design in glass fibre-reinforced polyamide housing with backlight, three-line, alphanumeric display for flow, counter for forward, reverse or net flow, indication of flow direction, comprehensive self-diagnostics for error signalling and recording. Keypad with display unit, leak flow volume suppression, measuring principle with constant field pulsing, automatic zero adjustment, flash memory for automatic recording of calibration and verification data of sensor data as well as customer specific settings, measuring error 0.4 %, simultaneous utilization of analog output 0/4 – 20 mA, pulse output, digital input and output, relay output 24 V DC/1 A, as well as electrical isolation of inputs and outputs. Ambient temperature -20 - +60 °C, power supply 24 V DC, degree of protection IP 67, supply and mount ready-to-operate.

3/12/18

8.3.4 One (1) centrifuge (decanter) for sludge dewatering

- manufacturer : ALFA LAVAL
- type : ALDEC 45 VDF
- flow : 5m3/h
- solids load : 125kgSS/h
- dewatered sludge solids : 23%

Bowl

Diameter 360 mm

Length 1512 mm

Maximum main speed 4.200 rpm

G-force at operating speed 3.549 g

Material - bowl shell AISI 316

Material - hubs Duplex SS

Material – bolts AISI 316

Beach angle 20°

Wear protection

Solids transportation aids, cylindrical and taper section: Ribs in AISI 316

Solids discharge: Tungsten carbide

Frame and casing

Type frame-casing: Box beam profile with integral casing

Material – frame: Mild steel colour medium blue NCS 3560 R75B

Material casing: SS AISI 316

Wear protection: Wear liner in AISI 304 on discharge area/discharge clarified

Main motor

Type ABB, VFD 15 kW, 3x380V, 50 Hz, IP55 type

Back drive

Type ABB, VFD 5.5 kW , 3x380V, 50 Hz, IP55 type

Gear box

Type Planetary 2 stage

Ratio 1: 159

Max. torque 2,5 kNm

Max differential speed and torque 44 rpm at 2,5 kNm

Differenzial speed conveyor regulation by inverter

Control panel

3/12/18

8.3.5 One (1) automatic preparation device for polyelectrolyte

- manufacturer	: KARKANIAS SA
- type	: TAP 3000K
- capacity	: max3000lt/h
- total capacity of three chambers	: 3*1000lt
- capacity of powder hopper	: 50 lt
- material	: AISI 304
- flocculant's concentration	: 0,05 – 0,5%

Powder dosing with variable speed by inverter

Three (3) propellers

- material	: AISI 304

1st propeller gear motor

- manufacturer	: BONFIGLIOLI
- type (motor / gear)	: BN 100LB / S401 F_1.9
- propeller speed	: 350rpm
- power	: 1,1KW

2nd propeller gear motor

- manufacturer	: BONFIGLIOLI
- type (motor / gear)	: P71 BN71B4 / VF44_7
- propeller speed	: 196rpm
- power	: 0,37KW

3rd propeller gear motor

- manufacturer	: BONFIGLIOLI
- type (motor / gear)	: P71 BN71B4 / VF44_14
- propeller speed	: 98rpm
- power	: 0,37KW
- electrical connections	: 400V, 50Hz

one pressure regulator, one electrovalve, one ball valve, one flowmeter, one manometer

Three level switches

Control panel

3/12/18

8.3.6 Two (2) progressing cavity (screw) pumps for dosing polyelectrolyte, one standby, with overpressure protection

- manufacturer	: NOV PROCESS (MONO PUMPS)
- type	: C14KC11RMA
- flow	: 650lt/h
- pressure	: 3bar
- speed	: 421rpm
- power	: 0,75 KW
- electrical connections	: 400V, 50Hz, IP55
- body suction chamber	: CAST IRON-BS EN 1561-EN-GJL-HB195
- stator	: NBR
- rotor	: STAINLESS STEEL - BS EN 10088-3 GRADE X2CrNiMo17-12-2, 1.4404
- shaft	: STAINLESS STEL - BS EN 10088-3 GRADE X2CrNiMo17-12-2, 1.4404

8.3.7 Two (2) frequency converters (inverters) for polyelectrolyte dosing pumps

- manufacturer	: SIEMENS
- type	: SINAMICS G 120C
- power	: 0,75KW

8.3.8 One (1) electromagnetic inductive flow meter for polyelectrolyte solution

- manufacturer	: SIEMENS
- type	: Sitrans F M MAG 5100 W (sensor)
	: Sitrans F M MAG 5000

Flow sensor

Flowmeter for water and wastewater treatment plants for compact or separate transmitter. NBR hard rubber lining, integrated grounding and measuring electrodes made of Hastelloy C, flange size according to EN 1092-1, ambient temperature -40 – +70 °C, temperature of medium -10 – +70 °C, flange and flowmeter housing made of painted steel, terminal box with cable gland M20, flash memory to save calibration, verification data of sensor, and save customer-specific settings, degree of protection IP 67, approvals PED-97/23EG, removable part as spare, supply and mount ready-to-operate.

Transmitter

Microprocessor-controlled transmitter in compact or offset design in glass fibre-reinforced polyamide housing with backlight, three-line, alphanumeric display for flow, counter for forward, reverse or net flow, indication of flow direction, comprehensive self-diagnostics for error signalling and recording. Keypad with display unit, leak flow volume suppression,

3/12/18

measuring principle with constant field pulsing, automatic zero adjustment, flash memory for automatic recording of calibration and verification data of sensor data as well as customer specific settings, measuring error 0.4 %, simultaneous utilization of analog output 0/4 – 20 mA, pulse output, digital input and output, relay output 24 V DC/1 A, as well as electrical isolation of inputs and outputs. Ambient temperature -20 - +60 °C, power supply 24 V DC, degree of protection IP 67, supply and mount ready-to-operate.

8.3.9 One (1) screw conveyor for dewatered sludge

- manufacturer	: KARKANIAS SA
- type	: SC
- power	: 1,5KW
- electrical connections	: 400V, 50Hz
- trough material	: AISI304
- screw material	: S355

8.3.10 Two (2) containers for dewatered sludge

- manufacturer	: VAN
- type	: NM-5V
- capacity	: 5m3
- dimensions (W x L x H)	: 1700 x 3000 x 1250mm

8.3.11 One (1) sludge container chassis with electric drive

- manufacturer	: KARKANIAS SA
- loading capacity	: 9tn

8.3.12 One (1) fan for ventilation of sludge dewatering building

- manufacturer	: Soler & Palau (S&P)
- type	: HCFT/4-400/H
- flow	: 5070 m3/hr
- speed	: 1350 rpm
- power	: 300W
- electrical connections	: 400V, 50Hz

8.3.13 One (1) lifting device (overhead crane) for dewatering equipment

- manufacturer	: KARKANIAS SA
- lifting capacity	: 1600kg

3/12/18

9. SERVICE WATER UNIT

9.1 One (1) automatic pressure station with two (one standby) centrifugal pumps for service water

- manufacturer	: EBARA
- type	: EVMSG15 6N5
- flow	: 21m3/h
- pressure	: 6bar
- speed	: 2900rpm
- power	: 5,5KW
- electrical connections	: 400V, 50Hz
- material (body/impellers/shaft)	: AISI304/AISI304/AISI316

Frequency converters (inverters), two items

- manufacturer	: DAB
- type	: MCE/P55
- power	: 5,5KW

Pressure vessels, two items

- capacity	: 18lt

Analog pressure transmitter

Control panel

3/12/18

10. TRANSFORMER STATION, POWER SWITCHBOARDS, BACKUP POWER SUPPLY

10.1 Medium Voltage Switchboard

- Enclosure manufacturer & montage	: GERO S.A.
- Incoming unit	: ABB, DRC_500
	With measurement and busbar earthing
- Switch disconnector	: ABB, SFC_500

10.2 Transformer

- Manufacturer	: ABB
- Rated power	: 500 kVA
- Primary voltage	: 10 kV
- Secondary voltage	: 400 V
- Frequency	: 50 Hz
- Oil weight	: 340 Kg
- Cooling	: ONAN

Standard accessories

Bucholz Relay CH/O

Off circuit tap changer on primary winding

Wheels

Dehydrating breather

Thermometer with 2 contactors

Magnetic Oil level indicator (w/o) contactors

Terminals for LV bushing/Flags

10.3 Low Voltage Main Distribution Switchboard

- Manufacturer	: GERO S.A.
-Switchgear manufacturer	: ABB

10.4 Two (2) Power Distribution Switchboards (PDC)

- Manufacturer	: GERO S.A.
- Switchgear manufacturer	: ABB
- Installation of PDC 1	: Blowers building
- Installation of PDC 2	: Sludge dewatering building

3/12/18

10.5 Backup Power Supply Unit

- Manufacturer	: KAPELOS DIESELS S.A.
- Type	: 210 kVA Standby Power on Trailer
Engine	
- Manufacturer	: John Deere
- Number of cylinders	: 6
- Displacement	: 6800 cm^3
- Stand By output, according to ISO3046	: 245 HP (183KW) at 1500 RPM
Alternator	
- Manufacturer	: Marelli
- Continuous output	: 185 KVA, 400V, 50Hz
- Standby output	: 205 KVA, 400V, 50Hz

Fuel tank: 220 l built-in the chassis, 2000l in stationary container

Automatic Control Panel for Standby use

- Control panel is made from metal sheet, epoxy painted with front door for easy inspection and repair.
- Automatic Mains Failure Controller
- The D500L is next generation genset control units combining multi-functionality and wide communication possibilities together with a reliable and low cost design.
- The unit complies and mostly exceeds world's tightest safety, EMC, vibration and environmental standards for the industrial category.
- Software features are complete with easy firmware upgrade process through USB port.
- The Windows based PC software allows monitoring and programming through USB, serial and GPRS.
- The PC based Rainbow Scada software allows monitoring and control of an unlimited number of gensets from a single central location.

Canopy

The canopy is designed and built to provide a perfect cooling for the engine, even for tropical ambient application. Noise level 67 dBA ±3 at 7 m.

Trailer

The complete gen set is equipped with trailer, including mechanical disk brake with auto-reverse. Directional stability and low maintenance coil spring.

3/12/18

11. AUTOMATION SYSTEM & SCADA

11.1 PLC 01 in Blower house

- Manufacturer	: Siemens
- Type	: Simatic S7-1500
- CPU	: 1515-2PN
- Working memory for program	: 500 kB
- Working memory for data	: 3 MB
- Total number of Digital Inputs	: 160
- Total number of Digital Outputs	: 64 (24 VDC/0,5A)
- Total number of Analog Inputs	: 24
- Total number of Analog Outputs	: 12

11.2 Touch Panel 01 in Blower house

- Manufacturer	: Siemens
- Type	: Simatic TP1200 Comfort
- Screen size	: 12" – 16 mil Colors
- Memory	: 12 MB

11.3 PLC 02 in Sludge dewatering building

- Manufacturer	: Siemens
- Type	: Simatic S7-1500
- CPU	: 1515-2PN
- Working memory for program	: 500 kB
- Working memory for data	: 3 MB
- Total number of Digital Inputs	: 224
- Total number of Digital Outputs	: 96 (24 VDC/0,5A)
- Total number of Analog Inputs	: 24
- Total number of Analog Outputs	: 16

3/12/18

11.4 Touch Panel 02 in Sludge dewatering building

- Manufacturer : Siemens
- Type : Simatic TP1200 Comfort
- Screen size : 12" – 16 mil Colors
- Memory : 12 MB

11.5 SCADA

- Manufacturer : Siemens

For each (of two redundant) server

WINCC SYSTEMSOFTWARE V7.4, RT 2048 (2048 POWER TAGS),
WINCC/SERVER V7.4, OPTION F. WINCC V7.4, RUNTIME-SW

For both servers

WINCC/REDUNDANCY V7.4, OPTION F. WINCC V7.4, RUNTIME-SW

For each (of two) client

WINCC SYSTEMSOFTWARE V7.4, RT 128 (128 POWER TAGS), RUNTIME-SW

11.6 Servers, 2 pcs

- Manufacturer : HP
- Model : Workstation Z240 SFF
- Processor : Intel Core i7 6700 3,4,GHz (Quad Core)
- RAM : 8 GB DDR4 SDRAM
- Cache Memory : 8 MB
- Hard drive : 1 TB – SATA 6 Gb/s
- Graphics controller : Intel HD Graphics 530
- Monitors : LG Monitor 25UM58-P (25")

3/12/18

11.7 Clients, 2 pcs

- Manufacturer	: HP
- Model	: Workstation Z240 MT
- Processor	: Intel Core i5 6600 3,3,GHz (Quad Core)
- RAM	: 8 GB DDR4 SDRAM
- Cache Memory	: 6 MB
- Hard drive	: 1 TB – SATA 6 Gb/s
- Graphics controller	: Intel HD Graphics 530
- Monitors	: LG Monitor 25UM58-P (25")

11.8 Printer A4

- Manufacturer	: Samsung
- Model	: MFP Laser Color SL-C480 N

11.9 Printer A3+

- Manufacturer	: Epson
- Model	: L1300

11.10 UPS

- Manufacturer	: Delta Electronics
- Model	: Amblon

Proposed Facility List

KARKANIAS
ENVIRONMENTAL TECHNOLOGY S.A.

A/A	Facility	Item	Size
1	Inlet and Overflow Manhole	Surface	56,10 m^2
		Depth	5,99 m
2	Septage Unit	Surface	8,40 m^2
		Volume	24,36 m^3
3	Pumping Station	Length	11,75 m
		Width	4,45 m
		Depth	8,34 m
4	Mechanical Wastewater Pretreatment Unit	Length	7,00 m
		Width	1,80 m
5	Flow Distribution Chamber I	Surface	28,27 m^2
		Volume	112,81 m^3
6	Predenitrification Tank	Surface	72,60 m^2
		Volume	363,00 m^3
7	Circulating Activated Sludge Tank	Surface	266,80 m^2
		Volume	1.334,00 m^3
8	Flow Distribution Chamber II	Surface	28,27 m^2
		Volume	113,66 m^3
9	Final Setling Tank	Surface	153,94 m^2
		Volume	619,14 m^3
10	Return Activated Sludge and Excess Suldge Pumping Station	Surface	18,55 m^2
		Volume	79,77 m^3
11	Chemical Phosphorus Precipiation	Length	5,10 m
		Width	2,80 m
		Surface	14,28 m^2
12	Filtration Unit	Length	5,80 m
		Width	3,85 m
		Depth	0,78 m

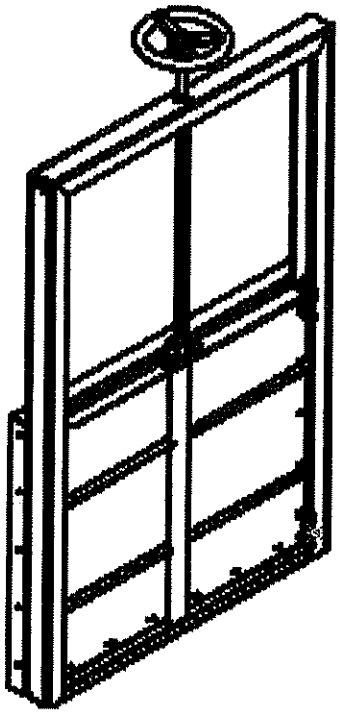
CHANNEL PENSTOCKS

Manufacturer General Specifications



General description

Channel penstocks are 3-sided sealing gates manufactured in square and rectangular dimensions, together with a wide range of trim levels and designs to suit a variety of applications. Operation is achieved manually by means of a hand wheel, electrically or pneumatically by actuators. Mounting options can be mainly on face wall or alternatively embedded in concrete inside channels. The whole structure is made of stainless steel grade 304L for higher corrosion resistance.

KARKANIAS
ENVIRONMENTAL TECHNOLOGY S.A.

Design

Channel penstocks frame is welded stainless steel shaped in U-profile and is suitable for mounting by grouting or by wall mounting at the end or into an open channel. Each penstock is provided with a suitable handwheel of adequate diameter for the duty required. Gearing is supplied where is necessary to ensure that the required operating force applied by hand to the rim of the wheel does not exceed 200 N. Instead of handwheel an electric actuator can be applied. The height of the handing is approximately 1.0 m above the operating level.

Penstocks are of non-rising stem and operation is achieved by a spindle. Spindle's thread form is trapezoidal and direction of closing is clockwise. On the door is fixed the spindle nut which is made of zinc-free bronze. The door is equipped with reinforced ribs in order to withstand the applied pressure load.

Fixing nuts and bolts are made of stainless steel material with grade similar to whole structure.

Penstocks shall be water-tight under the conditions of head and direction of flow as stated in the appropriate Clause or Schedule of the Particular Specification.

© Siemens AG 2015

Overview

The Siemens SITRANS LUT400 series controllers are compact, single point, long-range ultrasonic controllers for continuous level or volume measurement of liquids, slurries, and solids, and high accuracy monitoring of open channel flow.

Benefits

- Small 1/2 DIN enclosure [144 h x 144 d x 146 w mm (5.7 x 5.7 x 5.75 inch)] with standard universal mounting bracket for wall, pipe, and DIN rail, plus an optional panel mount
- Easy to use HMI display with local four-button programming, menu-driven parameters, and Wizard support for key applications
- English, German, French, Spanish, Chinese, Italian, Portuguese, and Russian texts on the HMI.
- Level, Volume, OCM Flow monitoring
- Three relays combined with a suite of pump, alarm, and relay control features
- HART Communications
- EDDs for SIMATIC PDM, AMS Device Manager, and Field Communicator 375/475, plus DTMs for FDTs (Field Device Tools)
- Web browser for local programming from an intuitive web-based interface
- Two discrete inputs for backup level override and pump interlock functions
- Echo profile and trend views from the local display
- Patented digital receiver for improved performance in electrically noisy applications (close proximity to VSDs)
- Real time clock with daylight savings time, supporting an integrated datalogger and energy saving algorithms for minimizing pump operation during high cost energy periods
- Removable terminal blocks for ease of wiring
- MCERTS Certified for Open Channel Flow

Application

The SITRANS LUT400 comes in three different models, depending on the application, level of performance and functionality required:

- SITRANS LUT420 Level Controller: Level or volume measurement of liquids, slurries, and solids, as well as basic pump control functions, and basic data logging capability
- SITRANS LUT430 Level, Pump and Flow Controller: Includes all features of the LUT420 plus a full suite of advanced pump control and alarm functionality, open channel flow monitoring, and basic flow data logging capability
- SITRANS LUT440 High Accuracy OCM: Our most featured, highest accuracy model. Includes all features of the LUT430, plus the industry's best accuracy (± 1 mm within 3 m), full suite of advanced control functionality, and enhanced flow logging capability
- Key applications: wet wells, reservoirs, flumes/weirs, chemical storage, liquid storage, hoppers, crusher bins, dry solids storage

Technical specifications

Mode of Operation	Ultrasonic level, volume, pump, and open channel flow
Measuring range	0.3 ... 60 m (1 ... 196 ft), transducer dependent
Input	
Discrete	0 ... 50 V DC switching level Logical 0 ≤ 10 V DC Logical 1 = 10 ... 50 V DC Max. 3 mA
Output	
Transducer frequency	10 ... 52 kHz
Ultrasonic transducer	Compatible transducers: All EchoMax and ST-H series transducers
Relays	• 1 SPDT Form C, NO or NC relay, rated 1A at 250 V AC, non-inductive and 3A at 30 V DC • 2 SPST Form A, NO relays, rated 5A at 250 V AC, non-inductive and 3 A at 30 V DC
mA output	4 ... 20 mA, isolated
• Max. load	600 Ω max. in ACTIVE mode, 750 Ω max. in PASSIVE mode
• Resolution	0.1 % of range
Accuracy	
Error in measurement	• Standard operation: ± 1 mm (0.04 inch) plus 0.17 % of measured distance • High accuracy OCM: ± 1 mm (0.04 inch), within 3 m (9.84 ft) range
Resolution	• Standard operation: 0.1 % of range or 2 mm (0.08 inch), whichever is greater • High accuracy OCM: 0.6 mm (0.02 inch), within 3 m (9.84 ft) range
Temperature compensation	• -40 ... +150 °C (-40 ... +300 °F) • Integral temperature sensor in transducer • External TS-3 temperature sensor (optional) • Programmable fixed temperature values
Rated operating conditions	
Installation conditions	
• Location	Indoor/outdoor
• Installation category	II
• Pollution degree	4
Ambient conditions	
• Ambient temperature (enclosure)	-20 ... +50 °C (-4 ... +122 °F)

Design	
Weight	
• Enclosure with display lid	1.3 kg (2.87 lb)
• Enclosure with blank lid:	1.2 kg (2.65 lb)
Material (enclosure)	Polycarbonate
Degree of protection	
• Enclosure with display or blank lid:	IP65/Type 4X/NEMA 4X
• Enclosure with blank lid and knock-out removed:	IP20
Remote display lid	IP65/Type 3/NEMA 3
Cable	
Transducer and mA output signal	• Transducer, mA output: 2 copper conductors, twisted, with foil shield/drain wire, 300 V 0.5 ... 0.75 mm² (22 ... 18 AWG) • Relay/power to be copper conductors per local requirements to meet 250 V 5 A contact rating
Max. separation between transducer and transceiver	365 m (1 200 ft)
Displays and controls	60 x 40 mm (2.36 x 1.57 inch) removable LCD, 240 x 160 pixels resolution, operational up to 5 m from enclosure base
Programming	
• Primary	4 Local push buttons
• Secondary	• PC running SIMATIC PDM • PC running Emerson AMS Device Manager • PC running a web browser • PC running a Field Device Tool (FDT) • Field Communicator 375/475 (FC375/FC475)
Memory	• 512 kB flash EPROM • 1.5 MByte flash for data logging
Power supply	
AC version	100 ... 230 V AC ± 15 %, 50/60 Hz, 36 VA Fuse: 5 x 20 mm, Slow Blow, 0.25 A, 250 V
DC version	10 ... 32 V DC, 10 W Fuse: 5 x 20 mm, Slow Blow, 1.6 A, 125 V
Certificates and approvals	
General	$CSA_{US/C}$, CE, FM, UL listed, RCM, MCERTS certified for Open Channel Flow
Hazardous	
• Non-incendive (Canada)	CSA Class I, Div. 2, Groups A, B, C, D; Class II, Div. 2, Groups F, G; Class III
• Shipping	Lloyd's Register, ABS
Communication	HART 7.0, USB

SITRANS LUT420 and LUT430		↗ **7ML5050-**
Compact ultrasonic level controllers for continuous short to long-range level or volume measurement of liquids, slurries, and solids. Both units include basic relay functions for pumps, alarms, and other controls, plus onboard data logging. LUT430 offers additional advanced pump control and alarm functionality, open channel flow monitoring, and basic flow data logging capability. Functionality varies by model.		**0** ☐☐ - ☐ **0**

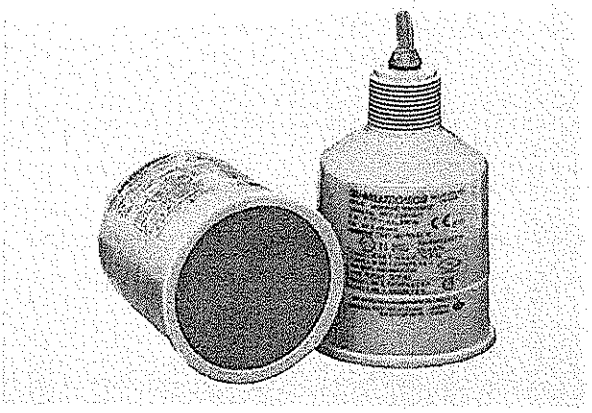
Level Measurement

Continuous level measurement - Ultrasonic transducers

Overview



EchoMax XRS-5 ultrasonic transducer provides reliable, continuous level monitoring of liquids and slurries in narrow lift stations/ wet wells, flumes, weirs and filter beds using a beam angle of just 10° and a CSM rubber face.

Benefits

- Narrow beam angle of only 10°
- Chemically resistant PVDF copolymer enclosure and CSM rubber face
- Measuring range: 8 m (26 ft) for measurement of liquids and slurries
- Fully submersible: IP68 degree of protection
- Easy installation with 1" NPT or R 1" BSPT connection

Application

The XRS-5 is non-contacting with a measuring range from 0.3 ... 8 m (1 ... 26 ft). Advanced echo processing ensures reliable data even in conditions with obstructions, turbulence and foam.

The hermetically sealed CSM rubber face and the PVDF copolymer enclosure are designed for maximum resistance to methane, salt water, caustics and harsh chemicals common to wastewater installations. With an IP68 degree of protection, this rugged sensor is fully submersible in the event of flood conditions. Use a submergence shield if full submergence is possible in the application. A submergence shield will maintain a high level reading output during submerged conditions.

The low-cost XRS-5 transducer is compatible with a full range of Siemens controllers, from a basic system for high/low alarm or simple pump control, up to advanced control systems with communications, telemetry and SCADA integration capabilities.

- Key Applications: wet wells, flumes, weirs, filter beds

Technical specifications

Mode of operation	
Measuring principle	Ultrasonic transducer
Input	
Measuring range	0.3 ... 8 m (1 ... 26 ft), dependent on application
Output	
Frequency	44 kHz
Beam angle	10°
Accuracy	
Temperature error	Compensated by integral temperature sensor
Rated operating conditions	
Vessel pressure	Normal atmospheric pressure
Ambient conditions	
• Ambient temperature	-20 ... +65 °C (-4 ... +149 ° F)
Design	
Weight (approximate shipping weight of sensor with standard cable length)	1.2 kg (2.6 lb)
Material (enclosure)	PVDF copolymer enclosure and CSM face
Process connection	1" NPT [(Taper), ANSI/ASME B1.20.1] or R 1" [(BSPT), EN 10226]
Degree of protection	IP65/IP68
Cable connection	2-core shielded/twisted, 0.5 mm^2 (20 AWG), PVC sheath
Cable (max. length)	• 365 m (1 200 ft) with RG 62 A/U coaxial cable • 365 m (1 200 ft) with 2-core twisted pair, foil shield, 0.5 mm^2 (20 AWG), PVC sheath, only for MultiRanger 100/200
Options	
Flange version	Factory flange with PTFE face for ASME, EN or JIS configuration
Submergence shield	For applications with flooding possible
Certificates and approvals	CE, RCM, KCC CSA Class I, Div. 2, Groups A,B,C,D, Class II, Div. 1 Groups E,F,G FM Class I, Zone 1, AEx m IIC, T6 Class II, III, Div. 1, Groups E,F,G T6 ATEX II 2GD / IECEx / INMETRO Ex mb IIC T6 Gb, Ex tb IIIC T85 °C Db

CERTIFICATE OF REGISTRATION

This is to certify that

Siemens Canada Limited

Siemens Milltronics Process Instruments
1954 Technology Drive, P.O. Box 4225, Peterborough, Ontario K9J 7B1 Canada

operates a

Quality Management System

which complies with the requirements of

ISO 9001:2008

for the following scope of registration

Design, build, sell, distribute and service level measurement products, dry solids flow measurement products and process protection products.

Certificate No.:	CERT-0084161	Original Certification Date:	September 8, 1994
File No.:	002284	Current Certification Date:	November 22, 2014
Issue Date:	October 24, 2014	Certificate Expiry Date:	November 21, 2017

BUREAU VERITAS
Certification

Certificate

for

Huba Control Ltd.

5436 Würenlos / Switzerland

Bureau Veritas Certification hereby confirms that the management system of the above-mentioned organisation has been assessed and complies with the requirements set out in the following standards / regulations.

Standards/Regulations:

SN EN ISO 9001 : 2008

The management system comprises:

Design and production of sensors

Date of initial certification: **11.05.1995**

The requirements of the standards/regulations must be complied with throughout the period of validity of this certificate. This will be ensured through regular monitoring by Bureau Veritas Certification.

Date of certification: **04.12.2014** Valid until: **03.12.2017**

Bureau Veritas Certification will provide information on the validity of this certificate on request at any time. Additional information on the management system and the area of applicability should be obtained from the organisation itself.

Certificate number: **CH8484729** Date: **04.12.2014**

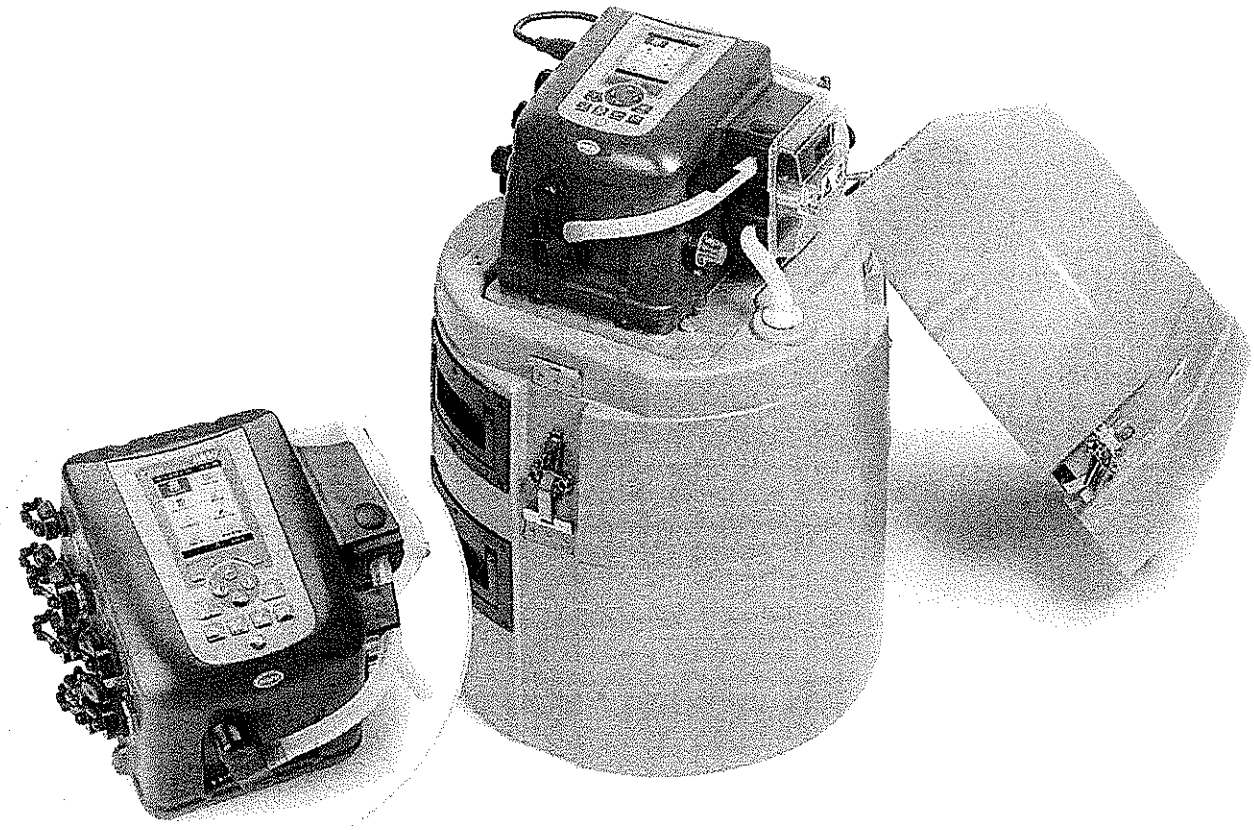
AS950 PORTABLE SAMPLER

Applications

- Wastewater
- Collection systems
- Industrial pretreatment
- Environmental monitoring
- Stormwater



Sampling has never been this easy.

HACH LANGE's AS950 sampler controller makes programming, data transfer and operation more intuitive and error-free.

Easiest and most intuitive operation

The large full colour display and intuitive programming give you access to all your programmable criteria on a single screen - eliminating scrolling through menus and supporting error-free operation.

Most convenient data transfer and programming available

The AS950 is the only sampler that utilises a USB drive to upload and download data and copy programs from one sampler to another.

Confidence in your sampling process

The program status screen instantly communicates alarms, missed samples and program progress for quick and easy troubleshooting.

Field convertible for compact or discrete sampling

Weighing only 12.7 kg, the AS950 portable sampler is designed for accuracy and convenience. Quickly switch between composite and discrete sampling in the field. Configurable for single or multiple bottle applications, it is specifically designed for use in 18-inch manholes.

Easy maintenance at low cost

Spring-mounted rollers provide long tubing life keeping maintenance costs low. The desiccant and pump tubing can easily be accessed; the replacement is possible without any tools. The rugged see-through pump cover is made for a quick visual inspection.

HACH LANGE

3/12/18

Technical Data*

AS950 Portable Sampler

Housing material	Impact resistant ABS plastic, 3-section construction Double-walled base with 2.54 cm insulation, direct ice contact with bottles (Sampler)
Temperature	Operating: 0 - 49 °C Storage: -40 - 60 °C
Power requirements (Voltage)	12 V DC
Dimensions (W x H x D)	Standard Base: 50.5 cm x 69.4 cm Compact Base: 44.1 cm x 61 cm Composite Base: 50.28 cm x 79.75 cm
Weight	Standard: 15 kg with (24) 1 L Polyethylene bottles; 14.8 kg with 10 L Polyethylene bottle Compact Base: 12.2 kg with (24) 575 mL Polyethylene bottles; 12.9 kg with 10 L Polyethylene bottle Composite Base: 15 kg with (1) 21 L Polyethylene bottle

AS950 Controller

Housing material	PC/ABS blend, NEMA 4X, 6, IP68, corrosion and ice resistant (Controller)
Display	1/4 VGA, Colour; self-prompting/ menu-driven program
User interface	Membrane switch keypad with 2 multiple function soft keys
Languages user interface	English, French, Spanish, Italian, German, Portuguese, Chinese
Lock function	Access code protection prevents tampering
Memory	Sample history: 4000 records; Data log: 325,000 records; Event log: 2000 records
Communication capabilities	USB and optional RS485 (MODBUS)
Inputs	One 0/4-20 mA input for flow pacing
Certifications	CE, UL

Sample container

STANDARD BASE CAPACITY:

(24) 1 L Polyethylene or 350 mL Glass bottles

(8) 2.3 L Polyethylene or 1.9 L Glass bottles

(4) 3.8 L Polyethylene or 3.8 L Glass bottles

(2) 3.8 L Polyethylene or 3.8 L Glass bottles

(1) 21 L Polyethylene composite bottle or

(1) 15 L Polyethylene composite bottle or

(1) 20 L Polyethylene composite bottle or

(1) 10 L Polyethylene or 10 L Glass composite bottle

COMPACT BASE CAPACITY:

(24) 575 mL Polyethylene bottles

(8) 950 mL Glass bottles

(1) 10 L Polyethylene or 10 L Glass bottle

COMPOSITE BASE CAPACITY:

(1) 21 L Polyethylene bottle

ICE CAPACITY:

Compact Base: 3.9 kg with (24) 575 mL PE bottles

Standard Base: 14.5 kg with (24) 350 mL Glass bottles

**Subject to change without notice.*

3/12/18

Technical Data*

Sampling Features

Programs

Dual Programs: Up to 2 sample programs can be run sequentially, in parallel, or according to day of week scheduling; enabling a single sampler to function like multiple samplers

Sampling mode

Pacing: Time weighted, Flow weighted, Time table, Flow table, Event

Distribution: Single bottle composite, multi-bottle composite, multi-bottle discrete, bottles per sample, samples per bottle or a combination of bottles per sample and samples per bottle

Operating mode

Continuous or non-continuous

Status messages

Communicates what program is running, if there are any missed samples, when the next sample will be taken, how many samples remain, number of logged channels, time of last measurement, memory available, number of active channels, if alarms were triggered, when alarms were triggered, active sensors and cabinet temperature

Alarm

Configurable alarms that show on status screen and are recorded in diagnostics alarm logs. Alarms can be set for system diagnostics and logging such as program end, sample complete, missed samples and full bottle. Channel alarms are setpoint alarms for the recorded measurements (channels), such as pH, level and power supply voltage.

Manual sampling

Initiates a sample collection independent of program in progress

Automatic shutdown

Multiple Bottle Mode: After complete revolution of distributor arm (unless Continuous Mode is selected)

Composite Mode: After preset number of samples have been delivered to composite container, from 1 to 999 samples, or upon full container.

Sample volume

Programmable in 10 mL increments from 10 to 10,000 mL

Sample interval

Selectable in single increments from 1 to 9999 flow pulses or 1 to 9999 minutes in one minute increments

Sample trigger

When equipped with flow sensor or pH/temperature sensor or peripheral monitoring options, sampling can be triggered upon an upset condition when field selectable limits are exceeded

Data logging

SAMPLE HISTORY - Stores up to 4000 entries for sample time stamp, bottle number and sample status (success, bottle full, rinse error, user abort, distributor error, pump fault, purge fail, sample timeout, power fail and low main battery).

MEASUREMENTS - Stores up to 325,000 entries for selected measurement channels in accordance with the selected logging interval.

EVENTS - Ability to store up to 2000 entries in Sample History logging. Records Power On, Power Fail, Firmware Updated, Pump Fault, Distributor Arm Error, Low Memory Battery, Low Main Battery, User On, User Off, Program Started, Program Resumed, Program Halted, Program Completed, Grab Sample, Tube Change Required, Sensor Communication Errors, Cooling Failed, Heating Failed, Thermal Error Corrected.

Diagnostics

View event and alarm logs as well as maintenance diagnostics

**Subject to change without notice.*

3/12/18

Technical Data*

Sample Pump and Strainer

Sample pump

High-speed peristaltic, dual roller, with 0.95 ID x 1.6 OD cm (3/8" ID x 5/8" OD) pump tube;

Pump body IP37, Polycarbonate cover

Vertical lift

8.5 m using 8.8 m maximum of 3/8" Vinyl intake tube at sea level at 20 to 25 °C

Tubing

Pump tubing: 9.5 mm ID x 15.9 mm OD Silicone

Intake tubing: 1.0 - 4.75 m minimum length, 1/4" or 3/8" ID Vinyl or 3/8" ID Teflon-lined Polyethylene with protective outer cover (black or clear)

Sample volume repeatability

Typical: ±5% of 200 mL sample volume with: 4.6 m vertical lift, 4.9 m of 3/8" Vinyl intake tube, single bottle, full bottle shut-off at room temperature and 1524 m elevation

Sample volume accuracy

Typical: ±5% of 200 mL sample volume with: 4.6 m vertical lift, 4.9 m of 3/8" Vinyl intake tube, single bottle, full bottle shut-off at room temperature and 1524 m elevation

Sample transport velocity

0.9 m/s with 4.6 m vertical lift, 4.9 m of 3/8" Vinyl intake tubing, 21 °C and 1524 m elevation

Pump flow rate

4.8 L/min at 1 m vertical lift with 3/8" intake tube typical

Internal clock

±1 second per day at 25 °C

Intake

Strainers: Choice of Teflon and 316 Stainless Steel construction, or all 316 Stainless Steel in standard size, high velocity, and low profile for shallow depth applications

Purge: Air purged automatically before and after each sample; duration automatically compensates for varying intake line lengths

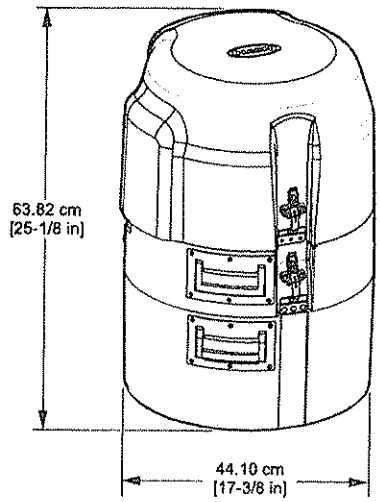
Rinse: Intake line automatically rinsed with source liquid prior to each sample, from 1 to 3 rinses

Retries or Fault: Sample collection cycle automatically repeated from 1 to 3 times if sample not obtained on initial attempt

*Subject to change without notice.

Dimensions

The AS950 Portable Sampler is designed for indoor or outdoor use. No secondary enclosure is required when operated within the specified temperature range. The sampler consists of three main sections - the top cover, the center control system, and the bottle/base section held together by Stainless Steel latches which serve as the connection point for the optional suspension harness. The lockable top cover protects the controller from extreme weather and unauthorized use.



Compact Base

Order Information

ASP.XXXXXXXXXX	AS950 Portable Sampler Portable Sampler with AS950 Controller, available in various configurations and with several factory installed options. Please contact HACH LANGE for more information.

Controller and Base Options

8975	Compact insulated base for AS950 Portable Sampler
8976	Standard insulated base for AS950 Portable Sampler
8561	Composite insulated base for AS950 Portable Sampler

Bottle Options and Accessories

1918	10 L Polyethylene bottle, with cap
6494	20 L Polyethylene bottle, with cap
737	Set of (24) 1 L Polyethylene bottles, with caps
1369	Set of (24) 575 mL Polyethylene bottles, with caps
2348	Set of (8) 950 mL Glass bottles, with Teflon-lined caps
2189	Retainer for (24) 350 mL Glass bottles
1422	Retainer for (8) 1.9 L Glass / (8) 2.3 Polyethylene bottles or (24) 350 mL Glass / (24) 575 mL Polyethylene bottles
2347	Retainer for (8) 950 mL Glass bottles
1502	Container support
8996	Retainer/full container shut-off

Distributors

8582	Distributor with arm for 24 bottle standard base and 12 bottle compact base
8580	Distributor with arm for 24 bottle compact base
8584	Distributor with arm for 2, 4 and 8 bottle standard base and 8 bottle compact base

Tubing and Strainers

920	7 m Vinyl intake tubing, 3/8" ID
922	7 m Teflon-lined Polyethylene tubing, 3/8" ID (requires Connection Kit 2186)
926	Strainer, Teflon/Stainless Steel
2070	Strainer, 316 Stainless Steel
2071	Strainer, for shallow depth applications, 316 Stainless Steel
2186	Connector Kit, for Teflon-lined Polyethylene tubing
4652	Strainer, high velocity and shallow depth
4600-15	Pump tubing, 4.5 m
4600-50	Pump tubing, 15 m
8964	Pump tube insert
9501400	Pump tube insert, non-contact liquid detect

Factory Installed Options

TWO SENSOR PORTS
Accepts HACH LANGE digital Differential pH, HACH LANGE digital AV9000 analyser with submerged area velocity flow and/or HACH LANGE digital US9000 ultrasonic level sensors

RAIN/RS485 PORT
Accepts HACH LANGE Rain Gauge (not included) or can be used as RS485 communications

NON-CONTACT LIQUID DETECT
Sample volume accuracy for applications that require complete tubing replacement

Please contact your local HACH LANGE representative for details.

Inputs/Outputs

9494500	IO9001 Module (connects through auxiliary port), includes 1 relay (high voltage)
9494600	IO9004 Module (connects through auxiliary port), includes multiple 0/4-20 mA outputs and inputs

Accessories

1355	Suspension harness (suspends the sampler)
9542	Manhole support bracket/spanner, 18 to 28 inches
9557	Manhole support bracket/spanner, 28 to 48 inches
5713000	Manhole support bracket, 18 to 27 inches
6987	Weatherguard fiberglass enclosure, 89 cm x 89 cm x 86 cm
6992	Weatherguard fiberglass enclosure, 91 cm x 66 cm x 135 cm
8713200	Solar Module, with 10 W panel and 12 VDC regulator
8754400	12 V Lead Acid battery with 3 pin connector
8753500EU	EU Charger, Lead Acid, 3 pin, 230 V
8754500EU	Power supply, 3 pin connector, 230 V, EU plug
9504700EU	USB cable, A to A (EU)

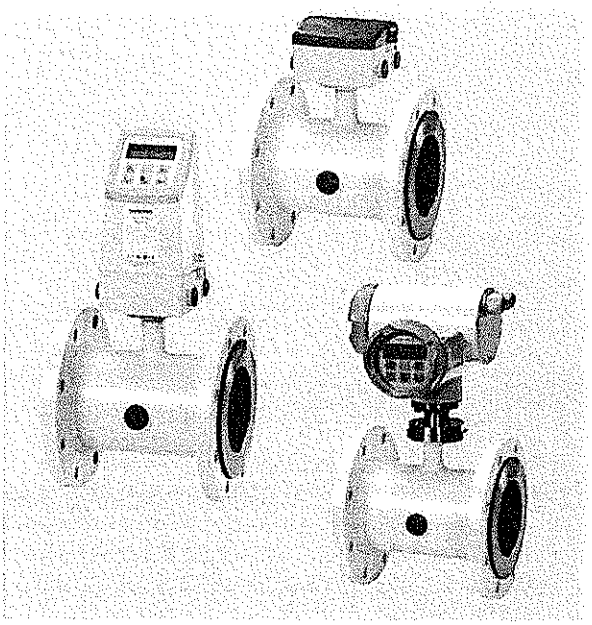
Overview



The SITRANS F M MAG 5100 W is an electromagnetic flow sensor designed to meet ground water, drinking water, waste water, sewage or sludge applications.

Benefits

- DN 15 to DN 1200 / 2000 (½" to 48"/78")
- Stock program of MAG 5100 W secures short delivery time
- Connection flanges EN 1092-1 (DIN 2501), ANSI, AWWA, AS and JIS.
- NBR Hard Rubber and Ebonite Hard Rubber liner for all water applications
- EPDM liner with drinking water approvals
- Hastelloy integrated grounding and measuring electrodes
- Increased low flow accuracy for water leak detection, due to coned liner design (Article No. 7ME6520, DN 15 to 300 mm (½" to 12")).
- Drinking water approvals
- Suitable for direct burial and constant flooding
- Custody transfer approvals
- Build-in length according to ISO 13359; the standard includes sizes up to DN 400.
- Easy commissioning, SENSORPROM unit automatically uploads calibration values and settings.
- Designed so patented in-situ verification can be conducted. Using SENSORPROM fingerprint.
- Custody Transfer option for water billing, with type approval after OIML R 49 and verified according to MI-001 - 0D inlet/ 0D outlet installation
  - pattern approval OIML R 49 (Denmark, Germany)
  - conforms to ISO 4064 and EN 14154 for mechanical flowmeters
  - PTB K7.2
- FM Fire Service Meter (Class Number 1044) for automatic fire protection systems
- Meets EEC directives: PED, 97/23/EC pressure directive for EN1092-1 flanges
- Simple onsite or factory upgrade to IP68/NEMA 6P of a standard sensor
- MCERTS approval for UK environmental market

Application

The main applications of the SITRANS F M electromagnetic flow sensors can be found in the following fields:

- Water abstraction
- Water treatment
- Water distribution network (leak detection management)
- Custody transfer water meters
- Irrigation
- Waste water treatment
- Filtration plant (e.g. reverse osmosis and ultra filtration)
- Industrial water applications

Mode of operation

The flow measuring principle is based on Faradays law of electromagnetic induction according to which the sensor converts the flow into an electrical voltage proportional to the velocity of the flow.

Integration

The complete flowmeter consists of a flow sensor and an associated transmitter SITRANS F M MAG 5000, MAG 6000 or MAG 6000 I.

The flexible communication concept USM II simplifies integration and update to a variety of fieldbus systems, e.g. HART, DeviceNet, PROFIBUS DP and PA, FOUNDATION Fieldbus H1 or Modbus RTU/RS 485.

Other approvals	MCERTS PED conforming: All EN1092-1 flanges and ANSI Class 150 (< DN 300 (<12")) - 97/23/EC[7] CRN (DN 50 - DN 1200 (2" ... 48")) CSA Class I, Div 2[8] FM Class I, Div 2[8] FM Fire Service Approval according to class 1044[8][9] VdS: Extinguishing systems DN 50 ... 300	PED conforming: All EN1092-1 flanges (≤ DN 600 (≤ 24") - 97/23/EC[7] CRN CSA Class I, Div 2[8] FM Class I, Div 2[8]

1) DN 750, DN 1050 and DN 1100 (30", 42" and 44") not available with EN 1092-1 (PN 10 and PN 16) and AS4087 flanges
2) Type 01 (SORF)
3) DN ≤ 600 type 01 (SORF); DN > 600 type 11
4) With compact transmitter MAG 5000 CT/6000 CT -20 ... +50 °C (-4 ... +122 °F); with compact MI-001 approved transmitter -25 ... +55 °C (-13 ... +131 °F)
5) Has to be ordered with the meter. It is not possible to order the certificate afterwards.
6) Including Annex G
7) For sizes larger than 600 mm (24") in PN 16 PED conformity is available as a cost-added option. The basic unit will carry the LVD (Low Voltage Directive) and EMC approval. All products sold outside of EU and EFTA are excluded from the directive, also products sold into certain market sectors are excluded. These include:
a) Meters used in networks for the supply, distribution and discharge of water.
b) Meters used in pipelines for the conveyance of any fluid from offshore to onshore.
c) Meters used in the extraction of petroleum or gas, including Christmas tree and manifold equipment.
d) Any meter mounted on a ship or mobile offshore platform. For further information on the PED standard and requirements see page 9/6
8) Not for sensors with 300 µm coating
9) DN 50, DN 80, DN 100, DN 150, DN 200, DN 250, and DN 300 (2", 3", 4", 6", 8", 10", and 12") with ANSI B16.5 Class 150 flanges

MAG 5100 W (7ME6520) with MAG 6000 CT (Revenue program) MI-001

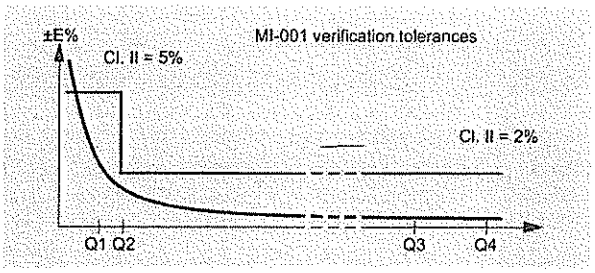
MAG 5100 W CT program is type approved according to international water meter standard OIML R 49. Since the first November 2006 the MI-001 water meter directive is in force, which means that all water meters can be sold across the EU borders if the water meters contain a MI-001 label.

The MAG 5100 W MI-001 verified and labeled products are a Class II approval according to Directive 2004/22/EC of the European Parliament and Council of March 31, 2004 on measuring instruments (MID), Annex MI-001 in the sizes from DN 50 to DN 300 (Article No. 7ME6520).

The MID certification is obtained as a modul B + D module approval according to the above mentioned directive.

Module B : Type approval according to OIML R 49

Module D : Quality insurance approval of production



MAG 5100 W (7ME6520) with MAG 5000/MAG 6000 or MAG 6000 CT for Fire Service applications

MAG 5100 W (7ME6520) is FM Fire Service approved for automatic fire protection systems. The approval is applicable for the sizes DN 50, DN 80, DN 100, DN 150, DN 200, DN 250 and DN 300 (2", 3", 4", 6", 8", 10" and 12") with ANSI B16.5 Class 150 flanges. The FM Fire Service approved product can be ordered via the Z-options P20, P21 and P22.

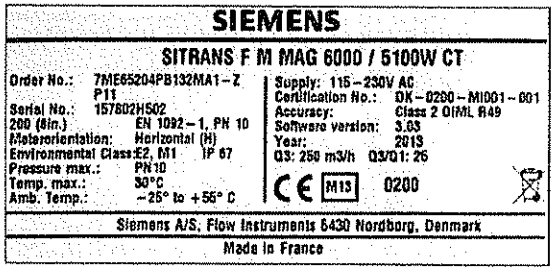
The Label is placed on the side of the encapsulation. An example of the product label is shown below:



OIML R 49/MI-001 approvals valid for:

- DN 50 to 300 mm (2" to 12")
- Horizontal installation
- Compact or remote with max. 3 m cable
- Power supply 115/230 V AC

Other restrictions may apply (see certificate).

Special OIML / MI-001 settings:

- Unit: m^3
- Qmax: Q3
- Digital output: Frequency

For other factory settings, see Operating Instructions.

• German	**A5E03376527**
• Spanish	**A5E00376529**
• French	**A5E03376521**
• Chinese	**A5E03376501**

This device is shipped with a Quick Start guide and a CD containing further SITRANS F literature.

All literature is also available for free at:
http://www.siemens.com/flowdocumentation

Accessories

Description	Article No.
Potting kit for terminal box of flow sensors for IP68/NEMA 6P	⊛ **FDK:085U0220**

⊛ We can offer shorter delivery times for configurations designated with the Quick Ship Symbol ⊛. For details see page 9/5 in the appendix.

MAG 5000/6000 transmitters and sensors are packed in separate boxes, the final assembly takes place during installation at the customer's place. MAG 6000 I transmitters and sensors are delivered compact mounted from factory.
Communication module will be pre-mounted in the transmitter.

Please use online Product selector to get latest updates.

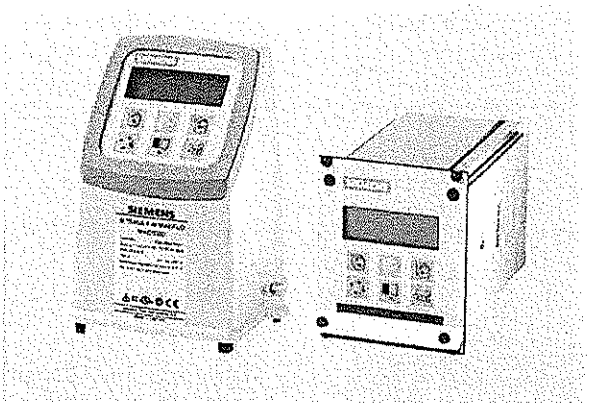
Overview



Transmitter MAG 5000/6000 compact version (left) and 19" insert version (right)

The MAG 5000 and 6000 are transmitters engineered for high performance, easy installation, commissioning and maintenance. The transmitters evaluate the signals from the SITRANS F M sensors type MAG 1100, MAG 1100 F, MAG 3100, MAG 3100 P and MAG 5100 W.

Transmitter types:

- MAG 5000: Max. measuring error ± 0.4 % ± 1 mm/s (incl. sensor)
- MAG 6000: Max. measuring error ± 0.2 % ± 1 mm/s (incl. sensor, see also sensor specifications) and with additional features such as: "plug & play" add-on bus modules; integrated batch functions.

Benefits

- Superior signal resolution for optimum turn down ratio
- Digital signal processing with many possibilities
- Automatic reading of SENSORPROM data for easy commissioning
- User configurable operation menu with password protection.
- 3 lines, 20 characters display in 11 languages.
- Flow rate in various units
- Totalizer for forward, reverse and net flow as well as additional information available
- Multiple functional outputs for process control, minimum configuration with analogue, pulse/frequency and relay output (status, flow direction, limits)
- Comprehensive self-diagnostic for error indication and error logging (see under SITRANS F M diagnostics)
- Batch control (MAG 6000 only)
- Custody transfer approval: PTB, OIML R 117, OIML R 49, MI-001, PTB K 7.2 and OE12/C 040 for chilled water
- MAG 6000 with add-on bus modules for HART, FOUNDATION Fieldbus H1, DeviceNet, Modbus RTU/RS 485, PROFIBUS PA and DP

Application

The SITRANS F M flowmeters are suitable for measuring the flow of almost all electrically conductive liquids, pastes and slurries. The main applications can be found in:

- Water and waste water
- Chemical and pharmaceutical industries
- Food and beverage industries
- Power generation and utility

Design

The transmitter is designed as either IP67 NEMA 4X/6 enclosure for compact or wall mounting or 19" version as a 19" insert as a base to be used in:

- 19" rack systems
- Panel mounting IP20/NEMA 1 (prepared for IP65/NEMA 2 display side)
- Back of panel mounting IP20/NEMA 1
- Wall mounting IP66/NEMA 4X

Several options on 19" versions are available such as:

- Transmitters mounted in safe area for Ex ATEX approved flow sensors (incl. barriers)
- Transmitters with electrode cleaning unit on request

Function

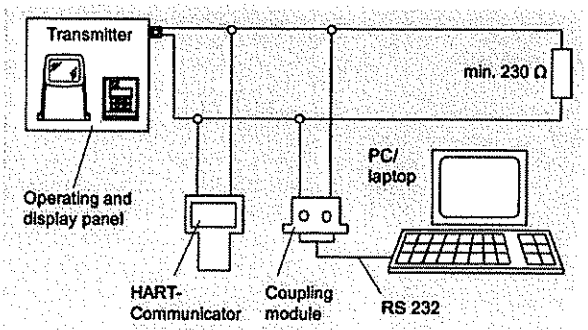
The MAG 5000/6000 are transmitters with a built-in alphanumeric display in several languages. The transmitters evaluate the signals from the associated electromagnetic sensors and also fulfil the task of a power supply unit which provides the magnet coils with a constant current.

Further information on connection, mode of operation and installation can be found in the data sheets for the sensors.

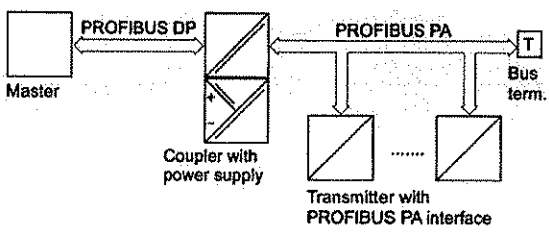
Displays and controls

Operation of the transmitter can be carried out using:

- Control and display unit
- HART communicator
- PC/laptop and SIMATIC PDM software via HART communication
- PC/laptop and SIMATIC PDM software using PROFIBUS or Modbus communication



HART communication



PROFIBUS PA communication

Technical specifications

Mode of operation and design	
Measuring principle	Electromagnetic with pulsed constant field
Empty pipe	Detection of empty pipe (special cable required in remote mounted installation)
Excitation frequency	Depend on sensor size
Electrode input impedance	> 1 x 10^{14} Ω
Input	
Digital input	11 ... 30 V DC, R_i = 4.4 KΩ
• Activation time	50 ms
• Current	$I_{11\ V\ DC}$ = 2.5 mA, $I_{30\ V\ DC}$ = 7 mA
Output	
Current output	
• Signal range	0 ... 20 mA or 4 ... 20 mA
• Load	< 800 Ω
• Time constant	0.1 ... 30 s, adjustable
Digital output	
• Frequency	0 ... 10 kHz, 50 % duty cycle (uni/bidirectional)
• Pulse (active)	24 V DC, 30 mA, 1 KΩ ≤ R_i ≤ 10 KΩ, short-circuit-protected (power supplied from flowmeter)
• Pulse (passive)	3 ... 30 V DC, max. 110 mA, 200 Ω ≤ R_i ≤ 10 KΩ (powered from connected equipment)
• Time constant	0.1 ... 30 s, adjustable
Relay output	
• Time constant	Changeover relay, same as current output
• Load	42 V AC/2 A, 24 V DC/1 A
Low flow cut off	0 ... 9.9 % of maximum flow
Galvanic isolation	All inputs and outputs are galvanically isolated.
Max. measuring error (incl. sensor and zero point)[1)]	
• MAG 5000	0.4 % ±1 mm/s
• MAG 6000	0.2 % ±1 mm/s
Rated operation conditions	
Ambient temperature	
• Operation	• Display version: -20 ... +60 °C (-4 ... +140 °F) • Blind version: -20 ... +60 °C (-4 ... +140 °F) • MI-001 version -25 ... +55 °C (-13 ... +131 °F) • Custody transfer (CT) version -20 ... +50 °C (-4 ... +122 °F)
• Storage	-40 ... +70 °C (-40 ... +158 °F)
Mechanical load (vibration)	
Compact version	18 ... 1000 Hz, 3.17 g RMS, sinusoidal in all directions to IEC 60068-2-36
19" insert	1 ... 800 Hz, 1 g, sinusoidal in all directions to IEC 60068-2-36
Degree of protection	
Compact version	IP67/NEMA 4X/6 to IEC 529 and DIN 40050 (1 mH_2O 30 min.)
19" insert	IP20/NEMA 1 to IEC 529 and DIN 40050
EMC performance	IEC/EN 61326-1 (all environments) IEC/EN 61326-2-5

Display and keypad	
Totalizer	Two eight-digit counters for forward, net or reverse flow
Display	Background illumination with alphanumeric text, 3 x 20 characters to indicate flow rate, totalized values, settings and faults; Reverse flow indicated by negative sign
Time constant	Time constant as current output time constant
Design	
Enclosure material	
• Compact version	Fiber glass reinforced polyamide; stainless steel AISI 316/1.4436 (IP65)
• 19" insert	Standard 19" insert of aluminum/steel (DIN 41494), width: 21 TE, height: 3 HE
• Back of panel	IP20/NEMA 1; Aluminum
• Panel mounting	IP20/NEMA 1 (prepared for IP65/NEMA 2 display side); ABS plastic
• Wall mounting	IP66/NEMA 4X; ABS plastic
Dimensions	
Compact version	See dimensional drawings
19" insert	See dimensional drawings
Weight	
Compact version	0.75 kg (2 lb)
19" insert	See dimensional drawings
Power supply	• 115 ... 230 V AC +10 % -15 %, 50 ... 60 Hz • 11 ... 30 V DC or 11 ... 24 V AC
Power consumption	• 230 V AC: 17 VA • 24 V AC: 9 VA, I_N = 380 mA, I_{ST} = 8 A (30 ms) • 12 V DC: 11 W, I_N = 920 mA, I_{ST} = 4 A (250 ms) • 24 V DC: 8.4 VA, I_N = 350 mA, I_{ST} = 4 A (10 ms) I_{ST}= 4 A (250 ms): For solar panel please secure stable current supply
Certificates and approvals	
General purpose	• CE (LVD, EMC, PED, RoHS) • UL (c-UL-us)
Hazardous areas	• FM, CSA - NI Class I Div. 2 Groups A, B, C, D
Custody transfer	• Cold water: MI-001 • Chilled water - PTB K 7.2 (Germany) - OE12/C 040 (Austria) - TS 27.02 008 (Denmark)
Marine (only for remote version with MAG 5100 W, DN 50 ... DN 300)	• ABS • Bureau Veritas • DNV • GL • Lloyd's Register of Shipping
Others	• CMC/CPA (China) • C-TICK (Australia and New Zealand EMC) • EAC (Russia,Belarus, Kazakhstan) • KCC (South Korea)

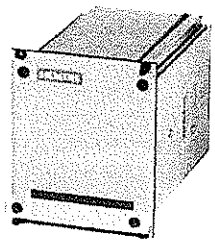
Communication	
Standard	
• MAG 5000	Without serial communication or HART as option
• MAG 6000	Prepared for client-mounted add-on modules
Optional (MAG 6000 only)	HART, Modbus RTU/RS 485, FOUNDATION Fieldbus H1, DeviceNet, PROFIBUS PA, PROFIBUS DP as add-on modules
• MAG 5000/6000 CT	No communication moduls approved

[1] For detailed accuracy specifications, see page 3/22

Safety barrier (e/ia)



Application	**For use with MAG 5000/6000 19" and MAG 1100 Ex/MAG 3100 Ex**		
Ex approval	MAG 1100 Ex [EEx e ia] IIB ATEX, EAC Ex		
	MAG 3100 Ex [EEx e ia] IIC ATEX, EAC Ex		
Cable parameter	Group	Capacity in µF	Inductance in mH
Electrode	IIC	≤ 4.1	≤ 80
	IIB	≤ 45	≤ 87
	IIA	≤ 45	≤ 87
Ambient temperature			
• During operation	-20 ... +50 °C (-4 ... +122 °F)		
• During storage	-20 ... +70 °C (-4 ... +158 °F)		
Enclosure			
• Material	Standard 19" insert in aluminum/steel (DIN 41494)		
• Width	21 TE (4.75")		
• Height	3 HE (5.25")		
• Rating	IP20 / NEMA 1 to EN 60529		
• Mechanical load	1 g, 1 ... 800 Hz sinusoidal in all directions to EN 60068-2-36

Transmitter MAG 5000

Description	Article No.	
Transmitter MAG 5000 Blind for compact and wall mounting; IP67/NEMA 4X/6, fibre glass reinforced polyamide		
• 11 ... 30 V DC/ 11 ... 24 V AC	✧ **7ME6910-1AA30-0AA0**	
• 115 ... 230 V AC, 50/60 Hz	✧ **7ME6910-1AA10-0AA0**	
Transmitter MAG 5000 Display for compact and wall mounting; IP67/NEMA 4X/6, fibre glass reinforced polyamide		
• 11 ... 30 V DC/ 11 ... 24 V AC	✧ **7ME6910-1AA30-1AA0**	
• 115 ... 230 V AC, 50/60 Hz	✧ **7ME6910-1AA10-1AA0**	
• 115 .. 230 V AC, 50/60 Hz, with HART	✧ **7ME6910-1AA10-1BA0**	
Transmitter MAG 5000 CT for compact and wall mounting, approved for custody transfer (only with approval marks, no verification – only a complete flowmeter can be verified, i.e. sensor together with the transmitter); IP67/NEMA 4X/6, fibre glass reinforced polyamide		
• 11 ... 30 V DC/ 11 ... 24 V AC	**7ME6910-1AA30-1AB0**	
• 115 ... 230 V AC, 50/60 Hz	**7ME6910-1AA10-1AB0**	
Transmitter MAG 5000 for 19" rack and wall mounting		• 11 ... 30 V DC/ 11 ... 24 V AC	✧ **7ME6910-2CA30-1AA0**	
• 115 ... 230 V AC, 50/60 Hz	✧ **7ME6910-2CA10-1AA0**	

✧ We can offer shorter delivery times for configurations designated with the Quick Ship Symbol ✧. For details see page 10/11 in the appendix

Transmitter MAG 6000

Description	Article No.	
Transmitter MAG 6000 Blind for compact and wall mounting; IP67/NEMA 4X/6, fibre glass reinforced polyamide		
• 11 ... 30 V DC/ 11 ... 24 V AC	✧ **7ME6920-1AA30-0AA0**	
• 115 ... 230 V AC, 50/60 Hz	✧ **7ME6920-1AA10-0AA0**	
Transmitter MAG 6000 for compact and wall mounting; IP67/NEMA 4X/6, fibre glass reinforced polyamide		
• 11 ... 30 V DC/ 11 ... 24 V AC	✧ **7ME6920-1AA30-1AA0**	
• 115 ... 230 V AC, 50/60 Hz	✧ **7ME6920-1AA10-1AA0**	
Transmitter MAG 6000 for compact and wall mounting; IP65/NEMA 4, stainless steel AISI 316/1.4436 (only for sensor with stainless steal terminal box) (for remote version order stainless steal terminal box separately)		
• 11 ... 30 V DC/ 11 ... 24 V AC	**7ME6920-1QA30-1AA0**	
• 115 ... 230 V AC, 50/60 Hz	**7ME6920-1QA10-1AA0**	
Transmitter MAG 6000 CT for compact and wall mounting, approved for custody transfer, without verification (no approval marks - only a complete flowmeter can be verified, i.e. sensor together with the transmitter); IP67/NEMA 4X/6, fibre glass reinforced polyamide		
• 11 ... 30 V DC/ 11 ... 24 V AC	**7ME6920-1AA30-1AD0**	
• 115 ... 230 V AC, 50/60 Hz	**7ME6920-1AA10-1AD0**	
Spare part transmitter for CT systems produced before 12/2016 or with firmware version 3.03		
• 11 ... 30 V DC/ 11 ... 24 V AC	**7ME6920-1AA30-1AB0**	
• 115 ... 230 V AC, 50/60 Hz	**7ME6920-1AA10-1AB0**	
Transmitter MAG 6000 SV for compact and wall mounting; special excitation frequency 44 Hz for Batch application DN ≤ 25/1" IP67/NEMA 4X/6, fibre glass reinforced polyamide		
11 ... 30 V DC/ 11 ... 24 V AC	**7ME6920-1AB30-1AA0**	
115 ... 230 V AC, 50/60 Hz	**7ME6920-1AB10-1AA0**

Schematics

Electrical connection

Grounding

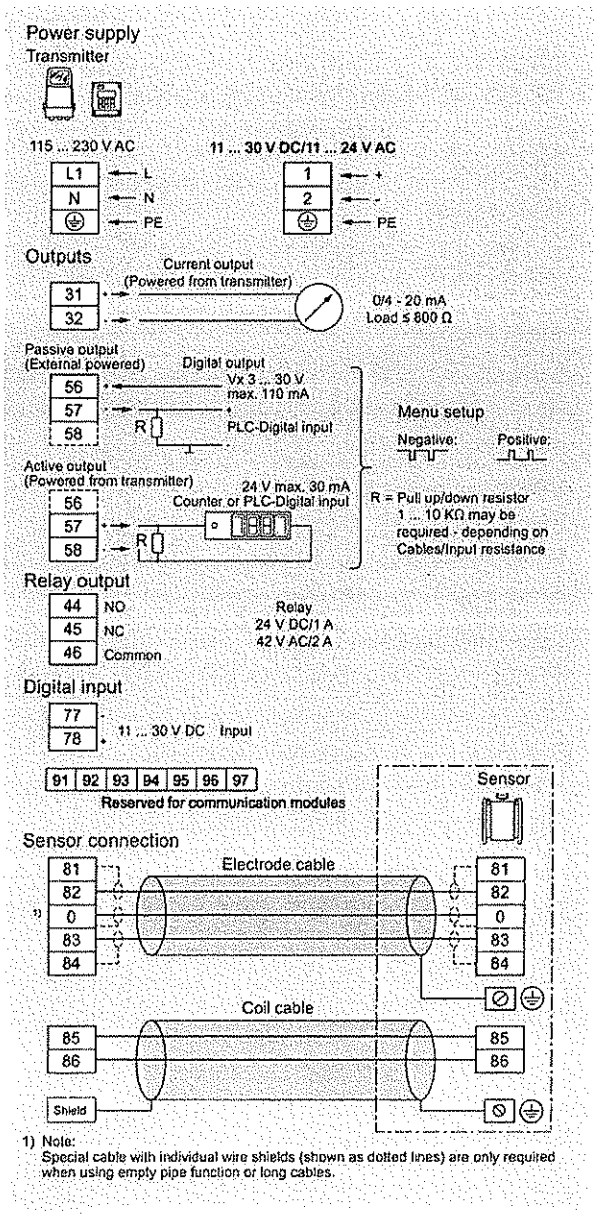
PE must be connected due to safety class 1 power supply.

Mechanical counters

When mounting a mechanical counter to terminals 57 and 58 (active output), a 1000 µF capacitor must be connected to the terminals 56 and 58. Capacitor + is connected to terminal 56 and capacitor - to terminal 58.

Output cables

If the output cable length is long in noisy environment, we recommend to use shielded cable.



3/12/18

PH 6587 - PH 7687

pH / ORP controller

The **PH 6587** and **PH 7687** belong to the latest series of instruments developed by B&C Electronics. These products are the result of more than 40 years of experience in the measurement and control of pH and ORP.

The sensors and submersible probes in our catalog allow the visualization of the temperature value as well as the pH or ORP, making the instruments suitable for any type of application and installation.

Main features

Range
0.00 ÷ 14.00 pH
-2000 ÷ 2000 mV
-10.0 ÷ 110.0 °C, 14.0 ÷ 230.0 °F

Display
The multi-line graphic display shows the values of the measures and the messages which guide the user through set-up, configuration and during normal operation.

Keyboard
There are dedicated keys to directly access zero and sensitivity calibration as well as set point configuration.

Operating mode
The meters can operate in automatic, measure or simulated mode so to facilitate start-up or maintenance.

Two filters software
The user can set two filters in order to obtain a stable reading and a faster response to the variations of the measurement in the process.

Two analog outputs
Can be addressed to any input and programmable 0/4 – 20 mA on two points of the scale. They allow PID control or transmission of the measured values.

Two On/Off regulators
Independent and addressable to any input with programmable set point on the scale.

PID output
During PID control through the analog output, the level of the actuation is displayed.
The user can select an FM regulation (pulse frequency) or WM (pulse width) addressed to the assigned relay.

Alarm
The relay is dedicated to min/max values of the measures, the excessive activation of relays and the presence of the logic inputs.

Logic inputs
Two free voltage contacts can generate a hold or alarm condition.

Autocleaning
A relay is dedicated to an external device for the sensor self-cleaning. This function is fully programmable through the controllers' software.

Universal power supply
From 85 to 264 Vac, 50/60 Hz.
The low voltage option allows to power the unit from 9 to 36 Vdc or from 12 to 24 Vac, 50/60 Hz.

Easy installation
All 6587 series of controllers have IP65 protection rating. They are suitable for wall mounting, or for DIN rail and handrail by means of optional accessories.
Series 7687 has an IP65 front panel and it is designed for customers who prefer panel mounting.

Compatible and versatile
The analyzers are compatible with all B&C Electronics' pH (glass or antimony) and ORP sensors.
The temperature measuring and compensation is done with Pt100 or Pt1000 two or three wires probes.

3/12/18

Applications

- Aquaculture
- Chemical industry
- Drinking water
- Electroplating
- Fertirrigation
- Food and beverage
- Paper and pulp
- Pharmaceutical
- Printing industry
- Swimming pools
- Textile industry
- Underground water
- Water treatment

Technical specifications

Inputs:	pH electrodes (glass or antimony) ORP electrodes Pt100 / Pt1000
Zero:	±2pH, ±100mV, ±5°C, ±9°F
Sensitivity:	80 ÷ 110 % (70 ÷ 140 % antimony)
Resolution:	0.01 pH, 1 mV, 0.1 °C/°F
Accuracy:	0.2 %
Repeatability:	0.1 %
Non-linearity:	0.1 %
Dual filter software:	0.4 ÷ 50.0 seconds for small and large variations
Dual analog output:	0-20 mA / 4-20 mA Rmax 600 Ω
Dual set points HI/LO:	ON/OFF - PFM - PWM, SPST relays
Hysteresis:	0 ÷ 1.40 pH, 0 ÷ 200 mV
Delay:	0 ÷ 100.0 seconds
Alarm:	SPDT relay with delay 0 ÷ 100.0 seconds
Cleaning function:	off / autoclean / manual, relay SPDT repetition time 0.1 ÷ 100.0 hours cleaning time 1.0 ÷ 60.0 seconds holding time 0.0 ÷20.0 minutes
SPST and SPDT relay contacts:	220V - 5 A resistive load
Operating temperature:	-10 ÷ 60 °C
Humidity:	95% without condensation
Power supply:	85 ÷ 264Vac - 50/60 Hz 9 ÷ 36Vdc, 12 ÷ 24Vac (option 091.42x)
Terminal blocks:	removable
Weight:	1360 g (PH 6587) 450 g (PH 7687)
Enclosure:	ABS, IP 65 protection (PH 6587) Metallic, IP 65 front panel only (PH 7687)
Dimensions:	256x230x89 mm (PH 6587) 98 x 98 x 104 mm, 90 x 90 x 95 mm panel cutout (PH 7687)
EMC/RFI conformity:	EN 61326
Registered design:	002564666-002 (PH 6587) 002564666-003 (PH 7687)

Epoxy pH electrodes

SZ 142
pH electrode Glass/Ref. combination, epoxy body, Gel sealed, cable 1.5 m with BNC.
Applications: clean water, portable instruments, swimming-pools.

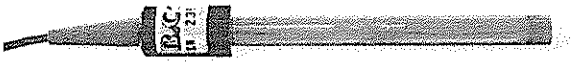
SZ 145
pH electrode Glass/Ref. combination, epoxy body, Gel sealed, cable 9 m.
Applications: clean water at room temperature, industrial instruments. In-line up to 7 bar.

SZ 1021
pH electrode, Glass/Ref. combination, sealed Gel, epoxy body.
Low cost (10 pcs minimum order), cable 1 m with BNC.
Applications: portable instruments.

SZ 1025
pH electrode, Glass/Ref. combination, sealed Gel, epoxy body.
Low cost (10 pcs minimum order), cable 9 m.
Applications: clean water at room temperature, industrial instruments. In-line up to 7 bar.

SZ 151
pH electrode glass/Ref. double junction combination, epoxy body for high temperature applications, cable 1.5 m with BNC.
Applications: very contaminated liquids or high temperature.

SZ 1075
Antimony pH electrode, combination, epoxy body, cable 9 m.
Applications: liquids with HF contents. It requires a special input pHmeter.



SZ 1131
Puncture tip pH electrode, epoxy body, PTFE junction.
1 m cable with BNC.
Applications: green houses, agricolture.

SZ 1093
Hydroponic pH electrode, epoxy body L=75 mm,
cable 3 m with BNC.
Applications: green houses, agricolture. In-line up to 7 bar.

Glass pH electrodes

SZ 160
pH Electrode Glass/Ref combination, glass body, anular junction, S7 connector.
Applications: contaminated liquids, portable instruments, laboratory.

SZ 161
pH Electrode Glass/Ref combination, glass body, anular junction, cable 1.5 m with BNC.
Applications: contaminated liquids, portable instruments, laboratory. In line up to 10 bar.

SZ 165
pH Electrode Glass/Ref combination, glass body, anular junction, cable 9 m.
Applications: general purpose, industrial meters, in line up to 10 bar.

SZ 171
Same as SZ 173. Cable 1.5 m with BNC.
Applications: contaminated liquids, amplified probes, portable instruments.

SZ 173
pH Electrode Glass/Ref combination, glass body, double anular junction, cable 9 m.
Applications: contaminated liquids, amplified probes, industrial and heavy applications. In line up to 10 bar.

SZ 195.2
pH Electrode Glass GX-V/Ref combination, glass body, low alkaline error, double anular junction, high temperature gel, cable 9 m.
Applications: contaminated and high temperature liquids, industrial and heavy applications. In line up to 10 bar.

SZ 1031
pH electrode, Glass/Ref. combination refillable, glass body, cable 1.5 m with BNC.
Applications: very contaminated liquids, portable instruments, laboratory.

3/12/18

pH autoclean flat electrodes

This is a new and more rugged flat electrodes generation.
They may be used in immersion or in-line for an autoclean effect by the liquid flow.

The reference electrode is a double junction in order to ensure a long life even in liquid containing Ammonia, Chlorine, Cyanide, Sulfide and other contaminating ions.

The body is in PVDF, corrosion resistant and food compatible.
The special shape protects mechanically the sensing parts.

SZ 1140

pH electrode, PTFE double junction, polymeric gel.
Range: 0/12 pH
Temperature: 0/100 °C
Pressure: 10 bar
Body: in PVDF, DL connector, 3/4" NPT thread
Length: 140 mm (45 mm in immersion)
Cable: SZ 947, L=8 m (not included)

SZ 1150

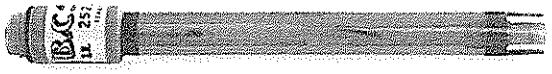
pH electrode, PTFE double junction, polymeric gel, built-in Pt100.
Range: 0/12 pH
Temperature: 0/100 °C
Pressure: 10 bar
Body: in PVDF, Military 4-pin connector, 3/4" NPT thread
Length: 140 mm (45 mm in immersion)
Cable SZ 9441: 10 m + connector (to be order separately)

SZ 2060

ORP electrode, PTFE double junction, polymeric gel.
Electrode: Platinum disk
Temperature: 0/100 °C
Pressure: 10 bar
Body: in PVDF, DL connector, 3/4" NPT thread
Length: 140 mm (45 mm in immersion)
Cable: SZ 947, L=8 m (not included)

Q 3/12/18

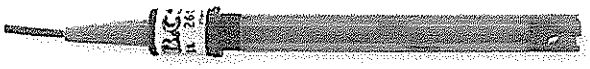
Epoxy O.R.P. electrodes



SZ 240
Gold/Reference combination electrode. Sealed Gel, epoxy body, S7 connector.
Applications: clean water, portable instruments, laboratory.

SZ 250
Platinum/Reference combination electrode. Sealed Gel, epoxy body, S7 connector.
Applications: clean water, portable instruments, laboratory.

SZ 245
Gold/Reference combination electrode. Sealed Gel, epoxy body, cable 9 m.
Applications: clean water, swimming pools, industrial instruments. In-line up to 7 bar.



SZ 2011
Platinum wire/Reference combination electrode. Sealed Gel, epoxy body, cable 1.5 m with BNC connector.
O.E.M. low cost version. (10 pcs. minimum order).
Applications: Swimming pools, portable and industrial instruments. In-line up to 7 bar.

SZ 2055
Platinum/Reference combination electrode. Sealed Gel, epoxy body, double junction, cable 9 m.
Applications: liquid with HF contents, high temperature, industrial instruments. In-line up to 10 bar.

SZ 251
Platinum/Reference combination electrode. Sealed Gel, epoxy body, cable 1.5 m with BNC connector.
Applications: clean water, swimming pools, portable instruments, laboratory. In-line up to 7 bar.

SZ 255
Platinum/Reference combination electrode. Sealed Gel, epoxy body, cable 9 m.
Applications: clean water, swimming pools, industrial instruments. In-line up to 7 bar.

SZ 2035
ORP electrode Band-Platinum/Ref. combination, epoxy body, Gel sealed, cable 9 m. Low cost (10 pcs minimum order).
Applications: clean water, industrial instruments. In-line up to 7 bar.

Glass O.R.P. electrodes

SZ 265
Gold/Reference combination electrode. Sealed Gel, glass body, cable 9 m.
Applications: cyanide treatment, industrial instruments. In-line up to 10 bar.

SZ 275
Platinum/Reference combination electrode. Sealed Gel, glass body, cable 9 m.
Applications: general purpose, chromate treatment, swimming pools, industrial instruments. In-line up to 10 bar.

E. Conductivity controller

Applications

- deionized water
- drinking water
- food industry
- surface treatment

Selectable input from:

- 2 electrodes
- 4 electrodes pre-amplified cell
- electrodeless pre-amplified cell

Scales: from 0.2 mS to 40 Siemens
Autoranging
Conversion in % - gr/l - Bè
Temperature readout
Dual filter software

Calibration parameters display
Dual set-point and alarm conditions display
Automatic or manual temperature compensation
Automatic or manual acquisition of the temperature compensation table

Isolated output:

- 0/20 mA or 4/20 mA selectable
- programmable input on the span

Automatic or manual operation
Dual Set-point with hysteresis, delay, and min/max programmable functions

Alarm:

- continuous/flashing
- min/max and delay programmable
- on Set-points timing

Automatic overload protection and reset
Extractable terminal block
96x96 (1/4 DIN) housing

Accessories

The controller can be used with all B&C Electronics conductivity cells, including the 4-electrodes and toroidal amplified probes

Input from 2-electrode cells

K cm⁻¹	0,1	0,2	0,5	1,0	2,0	5,0	10,0

3/12/18

7685 Series microprocessor-based

General information

The **7685 Series** ncludes all of the most complete and most performing analyzers of B&C Electronics.
They include all of the following measures:

- **pH - ORP**
- **Conductivity - Resistivity**
- **Free residual chlorine, combined and total**
- **Residual chlorine dioxide**
- **Residual dissolved ozone**
- **Dissolved oxygen**
- **Turbidity and Suspended Solids**
- **Residual dissolved Sulfide/Sulfite**
- **ISE**

All controllers are manufactured in robust aluminum enclosures DIN 43700, with front panels in polycarbonate.
Their reliability and precision, along with their functionality, make them easy to use in all applications. Finally, 7685 Series guarantees one of the best performance-price ratio in the marketplace.

Common features

Selectable input
Input from RTD Pt100 3 wires
Temperature readout
Dual filter software
Operating mode: automatic and manual
Calibration parameters display
Set-point and alarm conditions display
Automatic or manual temperature compensation
0/20 mA or 4/20 mA programmable isolated output
Dual set-point with hysteresis, delay and min/max programmable functions
Min/max and set-points timing alarm relay
Software: 3 access levels, user friendly, keyboard lock,watch-dog
EEPROM parameters storage
Automatic overload protection and reset
Extractable terminal blocks
96X96 (1/4" DIN) housing

Fieldbus Communication

The system is based on a digital communication through an open Modbus protocol, which interacts with the following Fieldbus:
Profibus DP, Profinet, Modbus-TCP, DeviceNet, CANopen, EtherNet /IP/Modbus-TCP
Customers can view the main data and functions, such us:

- Primary and secondary measuring values
- Error messages
- Set-points relay, alarm relay and autoclean relay status

The "Virtual Instrument" is an innovative solution through which Customers can perform, from a remote station, all specific operations.
Custom versions with bidirectional communication of data are available for O.E.M. and system integrators.

Technical Specifications

common to all instruments of the 7685 Series

Temperature
Input: RTD Pt100 2/3 wires

Set point A and B:
Operation: ON/OFF
Hysteresis: adjustable
Delay: 0.0/99.9 s
* Function: Max/Min
Relay contacts: SPDT 220V 5 A (resistive load)

Alarm:
Low/High: adjustable
Delay: 0.0/99.9 s
* Relay status: activated/deactivated
* Alarm on max. operating time of set-point A/B: ON/OFF
* Max operating time of set-point A/B: 0/60 minutes
* Relay contacts: SPDT 220V 5 A (resistive load)

Analog output N° 1
* Input corresponding to the analog output (option 091.371x): selectable
* Output range: 0-20/4-20 mA (it can be made to represent any segment of the measuring scale
Response time: 2.5 s for 98%
Isolation: 250Vac
Load: 600 ohm max

Analog outpunt N° 2 (option 091.371x)
* Input corresponding to the analog output: selectable
* Output range: 0-20/4-20 mA (it can be made to represent any segment of the measuring scale
Response time: 2.5 s for 98%
Isolation: 250Vac
Load: 600 ohm max

Configuration (*)
The above parameters indicated by asterisks "*", may be selected in the Configuration menu

General Specification
Alphanumeric display: 1 line x 16 characters
Operating temperature: 0/50 °C
Humidity: 95% without condensation
Power supply: 110/220Vac ± 10% 50/60 Hz
Isolation: 4 kV between primary and secondary (IEC 348)
Power: 5VA max.
Terminal block: extractable
Weight: 850 g
Dimensions: 96 x 96 x 155 mm

Options

091.701	RS 232 isolated output The output sends the data to the serial port of the computer.
091.404	24Vac power supply
091.414X	9/36VDC power supply

Two electrodes

SI 301
In-line E.Conductivity probe.
Applications: from 0 to 2 mS
Cell constant: K=1 cm^{-1}
Body: PVC
2 Electrodes: 316 S.Steel
Thread: 1"BSP
Operating temperature: 40 °C max.
Operating pressure: 3 bar max. at 25 °C
Option: non standard materials and cell constant.

SI 3013
In-line E.Conductivity probe
Applications: from 0 to 2 mS
Cell constant: K=1 cm^{-1}
Body: Polypropilene
2 Electrodes: 316 S.Steel
Thread: 1"BSP
Operating temperature: 50 °C max.
Operating pressure: 3 bar max. at 25 °C
Option: non standard materials and cell constant.

SI 308T
In-line E.Conductivity probe + Pt100
Applications: for high purity water.
Cell constant: K=0.01 cm^{-1}
Body: PVC
Electrodes: 316 S.Steel
Temperature sensor: Pt100
Thread: 1"BSP
Operating temperature: 50 °C max.
Operating pressure: 3 bar max. at 25 °C
Cable: 3 mt

SZ 3252
Three black Platinum band electrodes, K=1 cm^{-1}, epoxy body, cable 1.5 m with BNC connector.
Applications: portable instruments, laboratory.

SZ 3271
Two graphite electrodes, K=1 cm^{-1}, epoxy body L=110 mm D=12 mm, cable 1.5 m with BNC connector.
Applications: in-line up to 10 bar and 80 °C, range 0/80 mS.

SZ 3273.1
Two graphite electrodes, K=1 cm^{-1}, built-in Pt100, epoxy body L=110 mm D=12 mm, cable 3 m.
Applications: in-line up to 10 bar and 80 °C, range 0/80 mS.

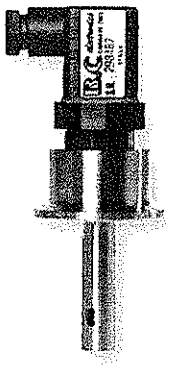
SZ 3273.4
Two graphite electrodes, K=1 cm^{-1}, built-in NTC 10K, epoxy body L=110 mm D=12 mm, cable 3 m.
Applications: in-line up to 10 bar and 80 °C, range 0/80 mS.

3/12/18

Special two electrodes

SZ 3320.1 - SZ 3330.1
For high Temperature/Pressure.
Applications: High purity water.
Cell constant SZ 3320.1: K = 0.1 cm^{-1}
Cell constant SZ 3330.1: K = 1 cm^{-1}
Thermocompensator: Pt100
Material in contact with liquids: S. Steel, PEEK L=55 mm
Temperature: 100 °C max.
Pressure: 16 bar max. at 25 °C
Connector: 4-pin
Thread: 3/4" NPT
Cable: SZ927.1 (to be ordered separately)

SZ 3300.1
Graphite Electrodes.
Applications: From 200 µS to 200 mS.
Cell constant: K = 1 cm^{-1}
Thermocompensator: Pt100
Material in contact with liquids: PES-graphite L=55 mm
Temperature: 100 °C max. at 10 bar
Pressure: 16 bar at 25 °C
Connector: 4-pin
Thread: 3/4" NPT
Cable: SZ927.1 (to be ordered separately)



SZ 3350.1 - SZ 3360.1
For high Temperature/Pressure.
Applications: High purity water.
Cell constant SZ 3350.1: K = 0.1 cm^{-1}
Cell constant SZ 3360.1: K = 1 cm^{-1}
Thermocompensator: Pt100
Material in contact with liquids: S. Steel, PEEK L=55 mm
Temperature: 100 °C max.
Pressure: 6 bar max. at 25 °C
Connector: 4-pin
Thread: Tri-Clamp 2"
Cable: SZ927.1 (to be ordered separately)

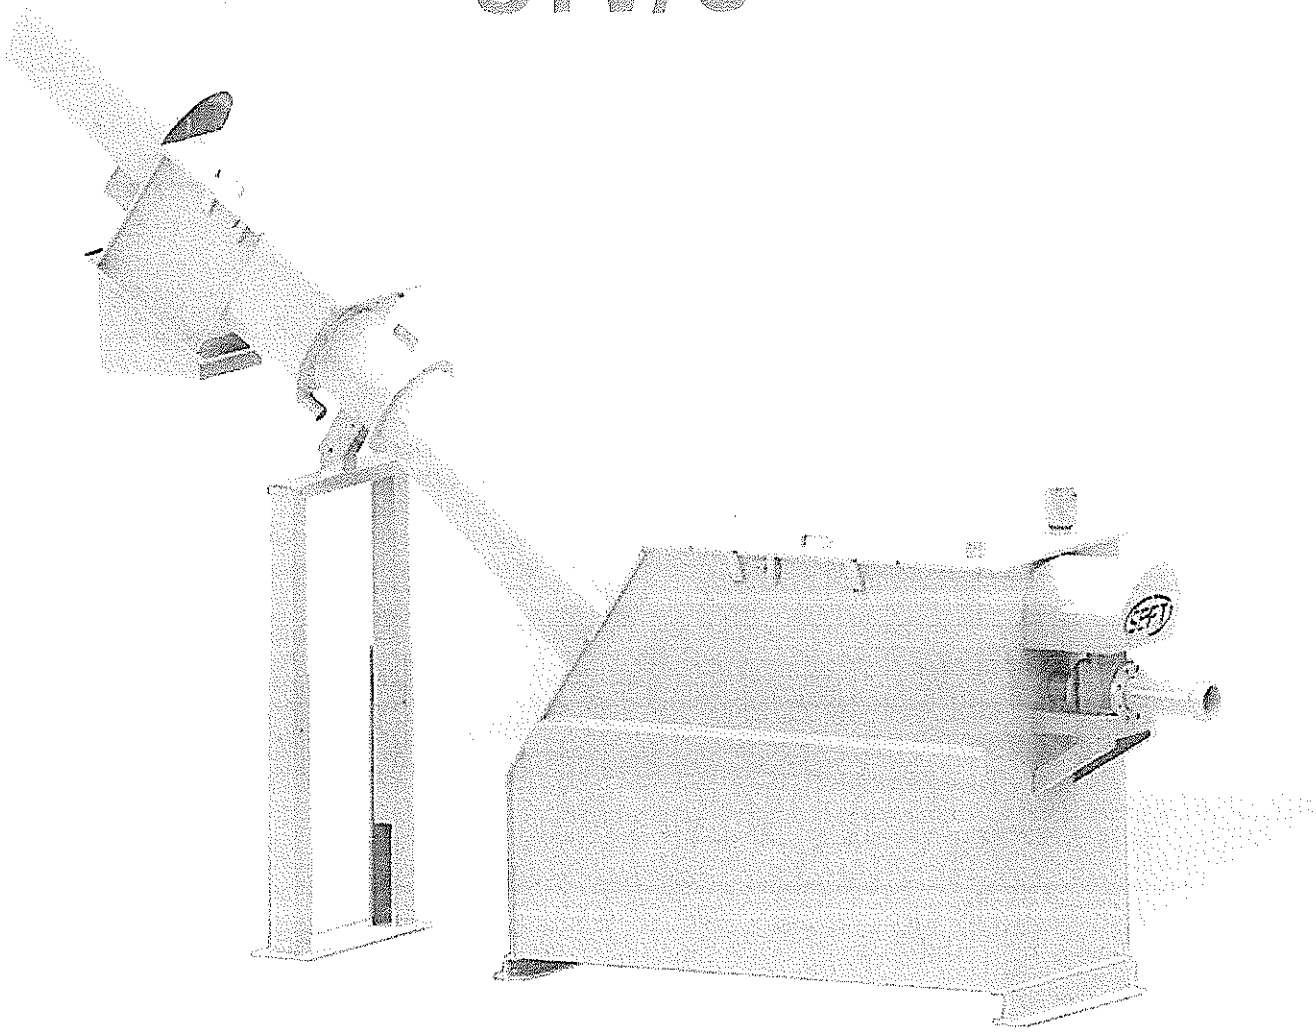
STV/C



IMPIANTO COMPATTO DI RICEZIONE E TRATTAMENTO BOTTINI

COMPACT PLANT FOR CESSPOOL ACCEPTANCE

l 3/12/18

STV/C

STV/C - IMPIANTO COMPATTO DI RICEZIONE E TRATTAMENTO BOTTINI

L'STV/C è un'unità compatta in grado di effettuare il pretrattamento di grigliatura delle acque reflue derivanti da processi industriali di vario tipo.
Prima che queste vengano immesse negli impianti di depurazione.
L'ingresso è dotato di un attacco rapido tipo "perrot" con valvola elettromeccanica; i reflui, scaricati direttamente dall'autobotte, vengono filtrati da una filtrococlea che rimuove le sostanze solide che poi vengono drenate e compattate e quindi scaricate in un cassone oppure insaccate.

FUNZIONI
- Filtrazione
- Drenaggio/compattazione del solido rimosso

VANTAGGI
- Assenza di odori
- Assenza di occlusioni
- Bassi costi di gestione e manutenzione
- Macchina compatta
- Lavori edili non necessari
- Basso contenuto residuo di materia organica
- Riduzione fino al 40% in volume del solido asportato
- Assenza di pompe

CARATTERISTICHE COSTRUTTIVE

Portata in ingresso	Fino a 100 m³/h
Foratura vaglio	ø 3 ÷ ø 7 mm foro tondo

STV/C - COMPACT PLANT FOR CESSPOOL ACCEPTANCE

STV / C is a unit compact able to carry out the pretreatment of screening of waste water from industrial processes of various types. Before they are released in wastewater treatment plants.
The entrance is equipped with a quick attack (Perrot type) and an electromechanical valve.
The wastewater discharged directly from the tanker, is filtered by a screw screen that removes the solids that are then drained and compacted and then discharged into a bin or bagged.

FEATURES
- *Filtration*
- *Drainage / compaction of the solid removed*

ADVANTAGES
- *No odor*
- *No obstructions*
- *Low operating costs and maintenance*
- *Compact machine*
- *Construction work is not necessary*
- *Low residual content of organic matter*
- *Reduction of up to 40% by volume of the solid removed*
- *No pumps*

MANUFACTURING FEATURES

Inlet flow rate	up to 100 m³/h
Filtering options	ø 3 ÷ ø 7 mm foro holes

STV/C 50 Compact Screening System for Cesspool Acceptance

Inlet Flow : 50 - 60 m3/h.

Screenings weight and volume reduction: up to 40% - 50%

External structure in stainless steel AISI304L
Tank in stainless steel AISI304L
Shaft less spirals in high carbon steel painted RAL 6029
Bolts in A2
Anti-wear material: bolted plates in stainless steel AISI304L

Loading basket diameter: **Ø456 mm**
Screw diameter for transport / compaction: Ø219 mm
Filtration type: rounded holes
Dimension: **Ø 10 mm**
Total length: 3.590 mm (motor excluded)
Discharging height: 1.500 mm from ground level
Inclination: 35°
Rectangular outlet spout for screening discharge 325 x 285 mm
Basket cleaning through nylon bolted brushes
Inlet: alum. DN100 Perrot w/motorized valve (24V)
Outlet: alum. DN200 PN10

Screw:
Motor 1,1 kW, 400V, 50Hz, 3 phases, 4 poles, IP55, F class, 11 rpm, BONFIGLIOLI gear reducer
Valve:
Electric actuator 24V, 50Hz, IP65, I class

Included:
Washing system on compaction zone with manual valve
Washing system on loading zone with manual valve
Washing system on cesspool inlet zone with manual valve
PE breathing valve on screw screen tank
PE pipe for returning liquid of compaction zone
predisposition for rod level sensor
limit-switches for opening hatches
Telescopic support foot in stainless steel AISI 304L
Eyebolts

Remarks regarding the selection process

The mixing result depends on the functional quality of the plant equipment in the mechanical treatment stage (preliminary treatment). Mineral fractions (grit and sand) must be always excluded from the process and cannot be kept in suspension. It is absolutely required to check the values mentioned above with the actual values on site.

Selection of submersible mixers

Proposal

Type		TR 21.145-4/11 S14	
Quantity		1	
Frequency		50	Hz
Rated power		1,3	kW
Propeller speed		1390	1/min
Power factor (ISO 21630)		200	N/kW
Propeller diameter		0,21	m
Maximum power input		1,74	kW
Power input in duty point	[*1]	1,2	kW
System-dependent power input	[*2]	1,2	kW
Power density	[*3]	34,5	W/m³
System-dependent power density	[*4]	34,5	W/m³
Distance to water surface		0,2	m

[*1] Measurement at static thrust acc. to ISO 21630 (inflow velocity ~0, Open Sea conditions).
[*2] The power consumption of the mixer will be reduced in proportion to the flow velocity which is generated in the tank.
[*3] According to ISO 21630.
[*4] According to site conditions.

Important note

Installation of the mixer(s) according to installation sketch. Before installing the mixers, the up-to-date tank plans must be submitted without previous request to WILO SE, Hof for revision.

To guarantee a continuous operation, the minimum water cover above the propeller specified by WILO must be ensured.
Please check if our basic data are identical to your application and, if necessary, inform us in writing about modifications/objections.
The aforementioned mixer(s) selection data are integral part of our warranty, whereas our warranty comes only into effect, when the submersible mixers are installed according to our recommendation. Because the overall function depends considerably on the correct positioning of the submersible mixers, we will not accept any warranty claims which result from positioning which we did not approve explicitly. Also zones of weak flow due to the tank geometry are not part of our warranty. The values of maximum power input, power input in the duty point and energy density are valid for clean water. Furthermore the use of our submersible mixers in patented procedures or under trade mark rights of third parties is excluded from our liability.

[1]In case of rectangular or round tanks the average flow velocity above the tank section cannot be guaranteed.
For the selected tank shape no directed circulating flow can be generated for physical reasons. The calculated average flow velocity refers only to an undirected turbulent flow.

All attached notes relating to the product and the selection are part of the technical selection of WILO SE.

Hints

The enclosed installation proposal is a schematic drawing and not according to scale. It serves as orientation guide. In case of order, the feasibility of this installation has to be matched with the tank drawing and the actual conditions. If there is an inflow and/or outflow in the immediate vicinity of the mixer, the mixer position must be checked based on updated tank plans to avoid bad influences on the mixer and short-circuit flows.

Τεχνικά στοιχεία

Υποβρύχια αντλία λυμάτων — Rexa PRO V06 DA-623 / EAD1X4-T0015-540-O

Τεχνική περιγραφή
Υποβρύχια αντλία λυμάτων, ως υποβρύχιο συγκρότημα με κινητήρα, για σταθερή, κατακόρυφη τοποθέτηση, για άντληση ανεπεξέργαστων χημικά και μηχανικά μη διαβρωτικών για την αντλία, λυμάτων. Ακτινικά διατεταγμένο στόμιο κατάθλιψης και αξονική αναρρόφηση. Το συγκρότημα είναι κατασκευασμένο με τρόπο εύκολο για τη συντήρηση. Οι παροχές πρέπει να εξασφαλίζονται κατά ISO 9906 Παρ. A.

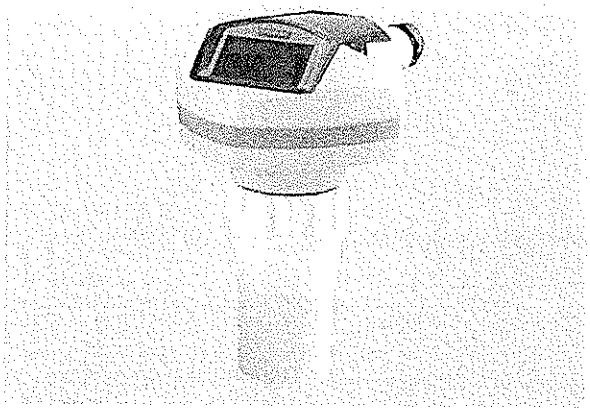
Overview



SITRANS Probe LU is a 2-wire loop powered ultrasonic transmitter for level, volume and flow monitoring of liquids in open channels, storage vessels, and simple process vessels.

Benefits

- Continuous level measurement up to 12 m (40 ft) range
- Easy installation and simple start-up
- Programming using infrared Intrinsically Safe handheld programmer, SIMATIC PDM or HART Communicator
- Communication using HART or PROFIBUS PA
- ETFE or PVDF transducers for chemical compatibility
- Sonic Intelligence signal processing
- Auto False-Echo Suppression for fixed obstruction avoidance
- Level to volume or level to flow conversion

Application

The SITRANS Probe LU is ideal for level monitoring in the water and wastewater industry, chemical storage vessels, and small bulk hoppers.

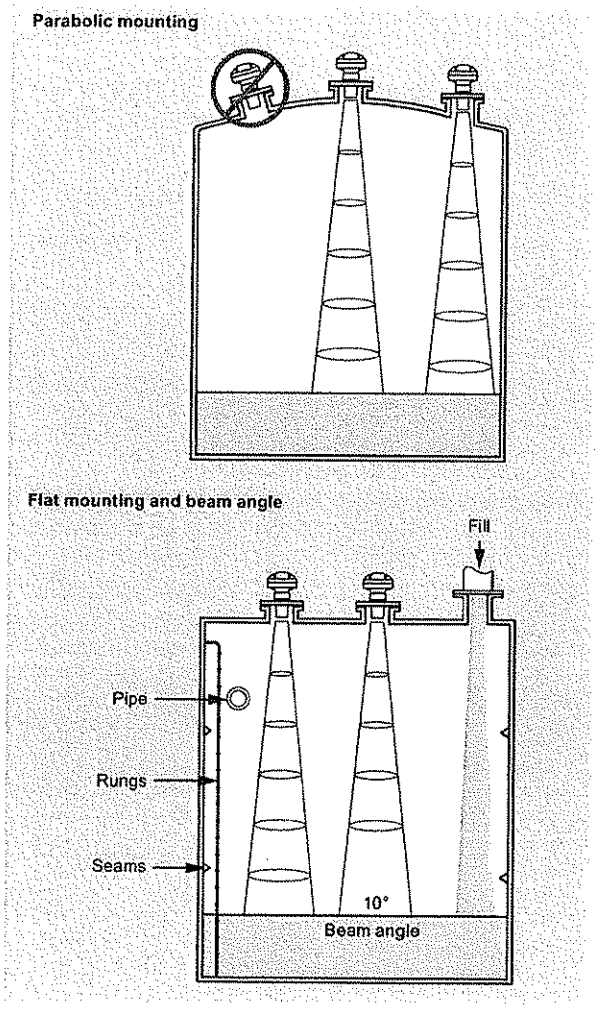
The range of SITRANS Probe LU is 6 or 12 m (20 or 40 ft). Using Sonic Intelligence, Auto False Echo Suppression for fixed obstruction avoidance, and accuracy of 0.15 % of range or 6 mm (0.25 inch), the Probe LU provides unmatched reliability.

The Probe LU offers two communications options: HART or PROFIBUS PA (Profile version 3.0, Class B).

The transducer on the Probe LU is available as ETFE or PVDF to suit the chemical conditions of your application. As well, for applications with varying material and process temperatures, the Probe LU incorporates an internal temperature sensor to compensate for temperature changes.

- Key Applications: chemical storage vessels, filter beds, liquid storage vessels

Configuration



SITRANS Probe LU mounting

Technical specifications

Mode of operation	
Measuring principle	Ultrasonic level measurement
Typical application	Level measurement in storage vessels and simple process vessels
Inputs	
Measuring range	
• 6 m (20 ft) model	0.25 ... 6 m (10 inch ... 20 ft)
• 12 m (40 ft) model	0.25 ... 12 m (10 inch ... 40 ft)
Frequency	54 kHz
Outputs	
mA/HART	
• Range	4 ... 20 mA
• Accuracy	± 0.02 mA
PROFIBUS PA	Profile 3, Class B
Performance	
Resolution	≤ 3 mm (0.12 inch)
Accuracy	± the greater of 0.15 % of range or 6 mm (0.24 inch)
Repeatability	≤ 3 mm (0.12 inch)
Blanking distance	0.25 m (10 inch)
Update time	≤ 5 s
• 4/20 mA/HART version	≤ 5 s at 4 mA
• PROFIBUS version	≤ 4 s at 15 mA current loop
Temperature compensation	Built-in to compensate over temperature range
Beam angle	10°
Rated operating conditions	
Ambient conditions	
• Location	Indoor/outdoor
• Ambient temperature	-40 ... +80 °C (-40 ... +176 °F)
• Relative humidity/ingress protection	Suitable for outdoor
• Installation category	I
• Pollution degree	4
Medium conditions	
• Temperature at flange or threads	-40 ... +85 °C (-40 ... +185 °F)
• Pressure (vessel)	0.5 bar g (7.25 psi g)
Design	
Material (enclosure)	PBT (Polybutylene Terephthalate)
Degree of protection	Type 4X/NEMA 4X, Type 6/NEMA 6/ IP67/IP68 enclosure
Weight	2.1 kg (4.6 lb)
Cable inlet	2 x M20 x 1.5 cable gland or 2 x ½" NPT thread or 1 x M20 x 1.5 and 1 x ½" NPT
Material (transducer)	Buna-N seal with ETFE (Ethylene Tetrafluoroethylene) or PVDF (Polyvinylidene Fluoride)

Process connection	
Threaded connection	2" NPT [(Taper), ANSI/ASME B1.20.1] R 2" [(BSPT), EN 10226] or G 2" [(BSPP), EN ISO 228-1]
Flange connection	3 inch (80 mm) universal flange
Other connection	FMS 200 mounting bracket (see page 4/187) or customer supplied mount
Display and Controls	
Interface	Local: LCD display with bar graph Remote: Available via HART or PROFIBUS PA
Configuration	Using Siemens SIMATIC PDM (PC) or HART handheld communicator or Siemens infrared handheld programmer
Memory	Non-volatile EEPROM
Power supply	
4 ... 20 mA/HART	Nominal 24 V DC with 550 Ω maximum; maximum 30 V DC 4 ... 20 mA
PROFIBUS PA	12, 13, 15, or 20 mA depending on programming (General Purpose or Intrinsically Safe version) Per IEC 61158-2
Certificates and Approvals	
General	$CSA_{US/C}$, FM, CE, RCM
Marine (only applies to HART communication option)	• Lloyd's Register of Shipping • ABS Type Approval
Hazardous	
• Intrinsically Safe (Europe)	ATEX II 1G Ex ia IIC T4 Ga
• Intrinsically Safe (USA/Canada)	CSA/FM, Class I, Div. 1, Groups A, B, C, D; Class II, Div. 1, Groups E, F, G; Class III T4
• Intrinsically Safe (International)	SIR 13.0008X Ex ia IIC T4 Ga
• Intrinsically Safe (Brazil)	INMETRO Ex ia IIC T4 Ga
• Non-incendive (USA)	FM Class I, Div. 2, Groups A, B, C, D T4
Handheld Programmer	
Intrinsically Safe Siemens handheld programmer	Infrared receiver
• Approvals for handheld programmer	ATEX II 1GD / IECEx SIR 09.0073 Ex ia IIC T4 Ga Ex iaD 20 T135 °C FM/CSA Class I, II, III, Div. 1, Groups A,B,C,D,E,F,G T6
Ambient temperature	-20 ... 50 °C (-5 ... 122 °F)
Interface	Proprietary infrared pulse signal
Power	3 V lithium battery (non-replaceable)

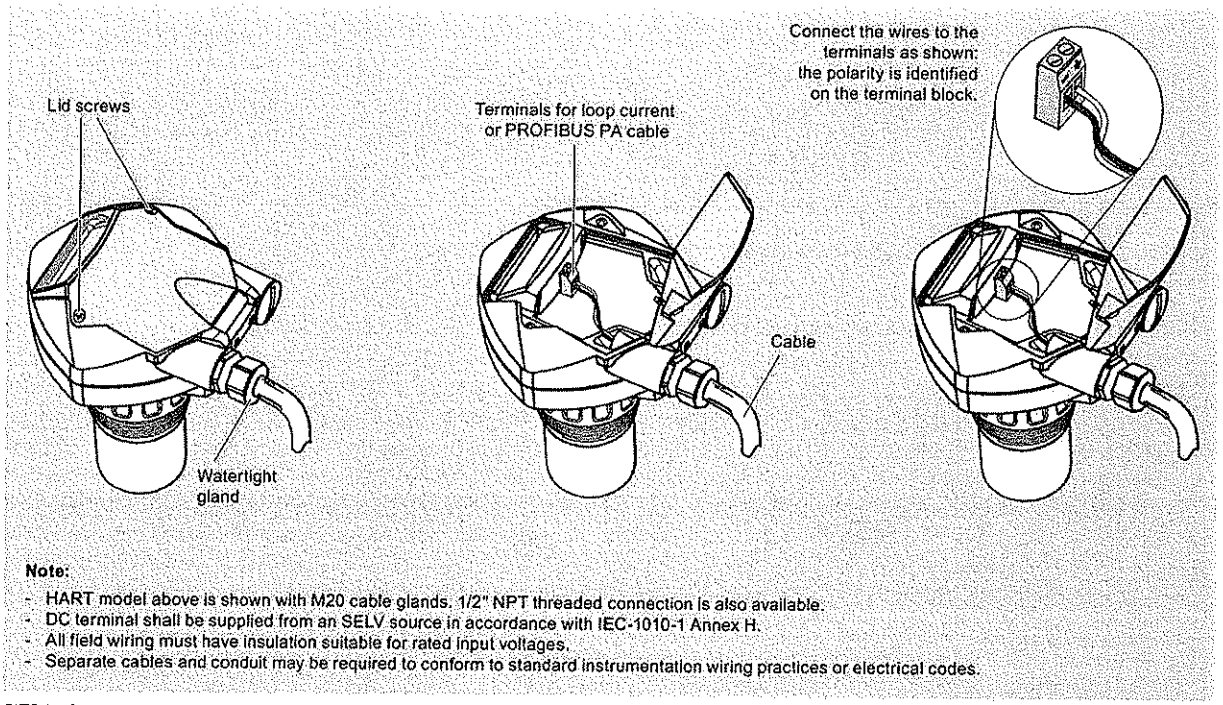
Schematics



Note:

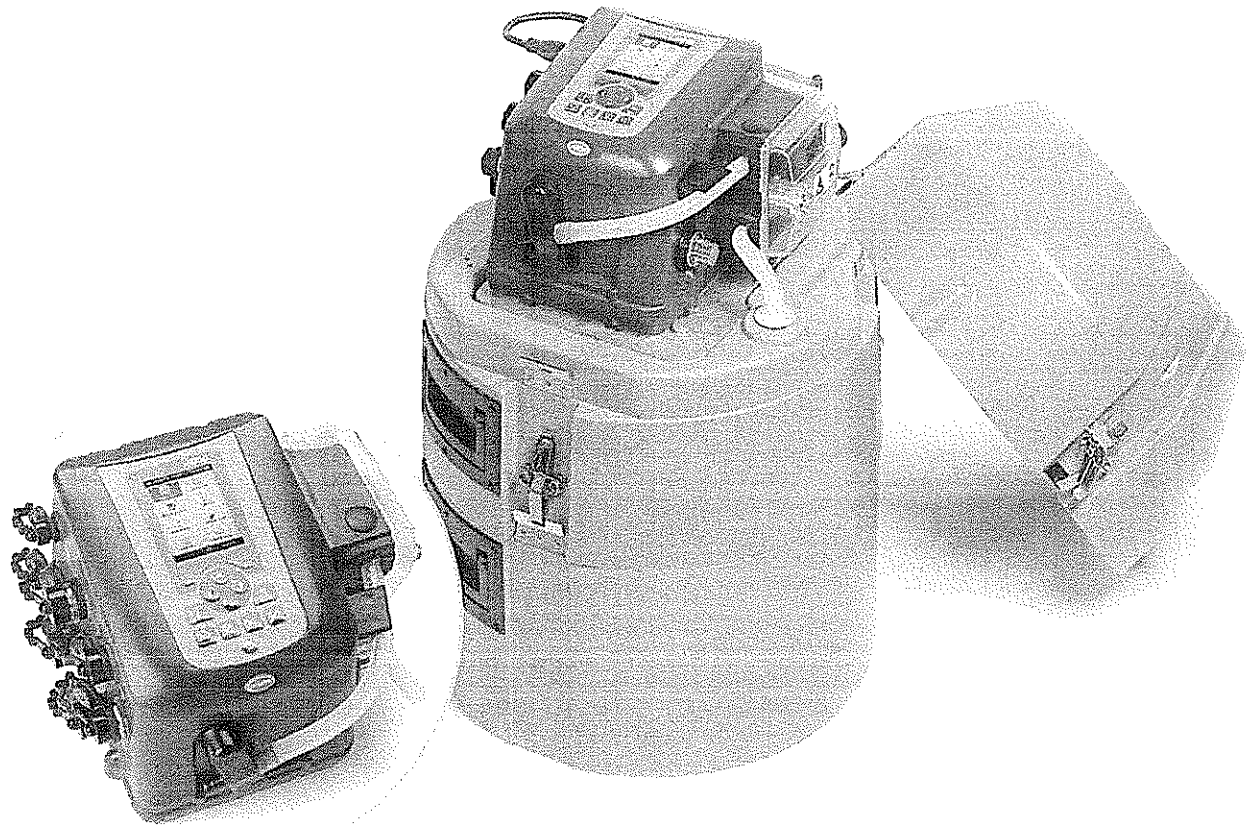
- HART model above is shown with M20 cable glands. 1/2" NPT threaded connection is also available.
- DC terminal shall be supplied from an SELV source in accordance with IEC-1010-1 Annex H.
- All field wiring must have insulation suitable for rated input voltages.
- Separate cables and conduit may be required to conform to standard instrumentation wiring practices or electrical codes.

SITRANS Probe LU connections

AS950
PORTABLE SAMPLER

Applications

- Wastewater
- Collection systems
- Industrial pretreatment
- Environmental monitoring
- Stormwater



Sampling has never been this easy.

HACH LANGE's AS950 sampler controller makes programming, data transfer and operation more intuitive and error-free.

Easiest and most intuitive operation

The large full colour display and intuitive programming give you access to all your programmable criteria on a single screen - eliminating scrolling through menus and supporting error-free operation.

Most convenient data transfer and programming available

The AS950 is the only sampler that utilises a USB drive to upload and download data and copy programs from one sampler to another.

Confidence in your sampling process

The program status screen instantly communicates alarms missed samples and program progress for quick and easy troubleshooting

Field convertible for compact or discrete sampling

Weighing only 12.7 kg the AS950 portable sampler is designed for accuracy and convenience. Quickly switch between composite and discrete sampling in the field. Configurable for single or multiple bottle applications, it is specifically designed for use in 18-inch manholes.

Easy maintenance at low cost

Spring-mounted rollers provide long tubing life keeping maintenance costs low. The desiccant and pump tubing can easily be accessed; the replacement is possible without any tools. The rugged see-through pump cover is made for a quick visual inspection.

Technical Data*

AS950 Portable Sampler

Housing material	Impact resistant ABS plastic, 3-section construction Double-walled base with 2.54 cm insulation, direct ice contact with bottles (Sampler)
Temperature	Operating: 0 - 49 °C
	Storage: -40 - 60 °C
Power requirements (Voltage)	12 V DC
Dimensions (W x H x D)	Standard Base: 50.5 cm x 69.4 cm
	Compact Base: 44.1 cm x 61 cm
	Composite Base: 50.28 cm x 79.75 cm
Weight	Standard: 15 kg with (24) 1 L Polyethylene bottles; 14.8 kg with 10 L Polyethylene bottle
	Compact Base: 12.2 kg with (24) 575 mL Polyethylene bottles; 12.9 kg with 10 L Polyethylene bottle
	Composite Base: 15 kg with (1) 21 L Polyethylene bottle

AS950 Controller

Housing material	PC/ABS blend, NEMA 4X, 6, IP68, corrosion and ice resistant (Controller)
Display	1/4 VGA, Colour; self-prompting/ menu-driven program
User interface	Membrane switch keypad with 2 multiple function soft keys
Languages user interface	English, French, Spanish, Italian, German, Portuguese, Chinese
Lock function	Access code protection prevents tampering
Memory	Sample history: 4000 records;
	Data log: 325,000 records;
	Event log: 2000 records
Communication capabilities	USB and optional RS485 (MODBUS)
Inputs	One 0/4-20 mA input for flow pacing
Certifications	CE, UL

Sample container

STANDARD BASE CAPACITY:

(24) 1 L Polyethylene or 350 mL Glass bottles

(8) 2.3 L Polyethylene or 1.9 L Glass bottles

(4) 3.8 L Polyethylene or 3.8 L Glass bottles

(2) 3.8 L Polyethylene or 3.8 L Glass bottles

(1) 21 L Polyethylene composite bottle or

(1) 15 L Polyethylene composite bottle or

(1) 20 L Polyethylene composite bottle or

(1) 10 L Polyethylene or 10 L Glass composite bottle

COMPACT BASE CAPACITY:

(24) 575 mL Polyethylene bottles

(8) 950 mL Glass bottles

(1) 10 L Polyethylene or 10 L Glass bottle

COMPOSITE BASE CAPACITY:

(1) 21 L Polyethylene bottle

ICE CAPACITY:

Compact Base: 3.9 kg with (24) 575 mL PE bottles

Standard Base: 14.5 kg with (24) 350 mL Glass bottles

**Subject to change without notice.*

3/12/18

Technical Data*

Sampling Features

Programs

Dual Programs: Up to 2 sample programs can be run sequentially, in parallel, or according to day of week scheduling; enabling a single sampler to function like multiple samplers

Sampling mode

Pacing: Time weighted, Flow weighted, Time table, Flow table, Event

Distribution: Single bottle composite, multi-bottle composite, multi-bottle discrete, bottles per sample, samples per bottle or a combination of bottles per sample and samples per bottle

Operating mode

Continuous or non-continuous

Status messages

Communicates what program is running, if there are any missed samples, when the next sample will be taken, how many samples remain, number of logged channels, time of last measurement, memory available, number of active channels, if alarms were triggered, when alarms were triggered, active sensors and cabinet temperature

Alarm

Configurable alarms that show on status screen and are recorded in diagnostics alarm logs. Alarms can be set for system diagnostics and logging such as program end, sample complete, missed samples and full bottle. Channel alarms are setpoint alarms for the recorded measurements (channels), such as pH, level and power supply voltage.

Manual sampling

Initiates a sample collection independent of program in progress

Automatic shutdown

Multiple Bottle Mode: After complete revolution of distributor arm (unless Continuous Mode is selected)

Composite Mode: After preset number of samples have been delivered to composite container, from 1 to 999 samples, or upon full container.

Sample volume

Programmable in 10 mL increments from 10 to 10,000 mL

Sample interval

Selectable in single increments from 1 to 9999 flow pulses or 1 to 9999 minutes in one minute increments

Sample trigger

When equipped with flow sensor or pH/temperature sensor or peripheral monitoring options, sampling can be triggered upon an upset condition when field selectable limits are exceeded

Data logging

SAMPLE HISTORY - Stores up to 4000 entries for sample time stamp, bottle number and sample status (success, bottle full, rinse error, user abort, distributor error, pump fault, purge fail, sample timeout, power fail and low main battery).

MEASUREMENTS - Stores up to 325,000 entries for selected measurement channels in accordance with the selected logging interval.

EVENTS - Ability to store up to 2000 entries in Sample History logging. Records Power On, Power Fail, Firmware Updated, Pump Fault, Distributor Arm Error, Low Memory Battery, Low Main Battery, User On, User Off, Program Started, Program Resumed, Program Halted, Program Completed, Grab Sample, Tube Change Required, Sensor Communication Errors, Cooling Failed, Heating Failed, Thermal Error Corrected.

Diagnostics

View event and alarm logs as well as maintenance diagnostics

**Subject to change without notice.*

3/12/18

Technical Data*

Sample Pump and Strainer

Sample pump

High-speed peristaltic, dual roller, with 0.95 ID x 1.6 OD cm (3/8" ID x 5/8" OD) pump tube;

Pump body IP37, Polycarbonate cover

Vertical lift

8.5 m using 8.8 m maximum of 3/8" Vinyl intake tube at sea level at 20 to 25 °C

Tubing

Pump tubing: 9.5 mm ID x 15.9 mm OD Silicone

Intake tubing: 1.0 - 4.75 m minimum length, 1/4" or 3/8" ID Vinyl or 3/8" ID Teflon-lined Polyethylene with protective outer cover (black or clear)

Sample volume repeatability

Typical: ±5% of 200 mL sample volume with: 4.6 m vertical lift, 4.9 m of 3/8" Vinyl intake tube, single bottle, full bottle shut-off at room temperature and 1524 m elevation

Sample volume accuracy

Typical: ±5% of 200 mL sample volume with: 4.6 m vertical lift, 4.9 m of 3/8" Vinyl intake tube, single bottle, full bottle shut-off at room temperature and 1524 m elevation

Sample transport velocity

0.9 m/s with 4.6 m vertical lift, 4.9 m of 3/8" Vinyl intake tubing, 21 °C and 1524 m elevation

Pump flow rate

4.8 L/min at 1 m vertical lift with 3/8" intake tube typical

Internal clock

±1 second per day at 25 °C

Intake

Strainers: Choice of Teflon and 316 Stainless Steel construction, or all 316 Stainless Steel in standard size, high velocity, and low profile for shallow depth applications

Purge: Air purged automatically before and after each sample; duration automatically compensates for varying intake line lengths

Rinse: Intake line automatically rinsed with source liquid prior to each sample, from 1 to 3 rinses

Retries or Fault: Sample collection cycle automatically repeated from 1 to 3 times if sample not obtained on initial attempt

Subject to change without notice.

Dimensions

The AS950 Portable Sampler is designed for indoor or outdoor use. No secondary enclosure is required when operated within the specified temperature range. The sampler consists of three main sections - the top cover, the center control system, and the bottle/base section held together by Stainless Steel latches which serve as the connection point for the optional suspension harness. The lockable top cover protects the controller from extreme weather and unauthorized use.

Order Information

ASP.XXXXXXXXXX	AS950 Portable Sampler Portable Sampler with AS950 Controller, available in various configurations and with several factory installed options. Please contact HACH LANGE for more information.

Controller and Base Options

8975	Compact insulated base for AS950 Portable Sampler
8976	Standard insulated base for AS950 Portable Sampler
8561	Composite insulated base for AS950 Portable Sampler

Bottle Options and Accessories

1918	10 L Polyethylene bottle, with cap
6494	20 L Polyethylene bottle, with cap
737	Set of (24) 1 L Polyethylene bottles, with caps
1369	Set of (24) 575 mL Polyethylene bottles, with caps
2348	Set of (8) 950 mL Glass bottles, with Teflon-lined caps
2189	Retainer for (24) 350 mL Glass bottles
1422	Retainer for (8) 1.9 L Glass / (8) 2.3 Polyethylene bottles or (24) 350 mL Glass / (24) 575 mL Polyethylene bottles
2347	Retainer for (8) 950 mL Glass bottles
1502	Container support
8996	Retainer/full container shut-off

Distributors

8582	Distributor with arm for 24 bottle standard base and 12 bottle compact base
8580	Distributor with arm for 24 bottle compact base
8584	Distributor with arm for 2, 4 and 8 bottle standard base and 8 bottle compact base

Tubing and Strainers

920	7 m Vinyl intake tubing, 3/8" ID
922	7 m Teflon-lined Polyethylene tubing, 3/8" ID (requires Connection Kit 2186)
926	Strainer, Teflon/Stainless Steel
2070	Strainer, 316 Stainless Steel
2071	Strainer, for shallow depth applications, 316 Stainless Steel
2186	Connector Kit, for Teflon-lined Polyethylene tubing
4652	Strainer, high velocity and shallow depth
4600-15	Pump tubing, 4.5 m
4600-50	Pump tubing, 15 m
8964	Pump tube insert
9501400	Pump tube insert, non-contact liquid detect

Factory Installed Options

TWO SENSOR PORTS
Accepts HACH LANGE digital Differential pH, HACH LANGE digital AV9000 analyser with submerged area velocity flow and/or HACH LANGE digital US9000 ultrasonic level sensors

RAIN/RS485 PORT
Accepts HACH LANGE Rain Gauge (not included) or can be used as RS485 communications

NON-CONTACT LIQUID DETECT
Sample volume accuracy for applications that require complete tubing replacement

Please contact your local HACH LANGE representative for details.

Inputs/Outputs

9494500	IO9001 Module (connects through auxiliary port), includes 1 relay (high voltage)
9494600	IO9004 Module (connects through auxiliary port), includes multiple 0/4-20 mA outputs and inputs

Accessories

1355	Suspension harness (suspends the sampler)
9542	Manhole support bracket/spanner, 18 to 28 inches
9557	Manhole support bracket/spanner, 28 to 48 inches
5713000	Manhole support bracket, 18 to 27 inches
6987	Weatherguard fiberglass enclosure, 89 cm x 89 cm x 86 cm
6992	Weatherguard fiberglass enclosure, 91 cm x 66 cm x 135 cm
8713200	Solar Module, with 10 W panel and 12 VDC regulator
8754400	12 V Lead Acid battery with 3 pin connector
8753500EU	EU Charger, Lead Acid, 3 pin, 230 V
8754500EU	Power supply, 3 pin connector, 230 V, EU plug
9504700EU	USB cable, A to A (EU)

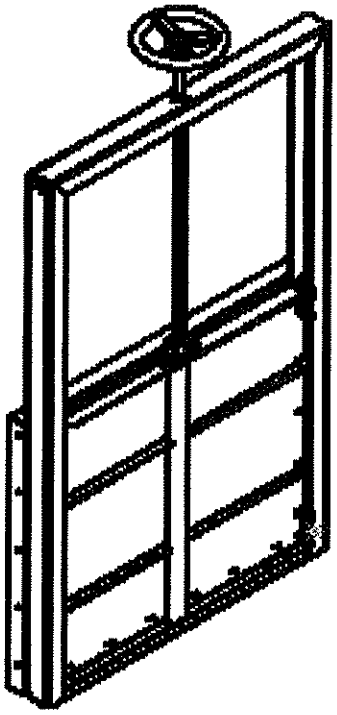
CHANNEL PENSTOCKS

Manufacturer General Specifications



General description

Channel penstocks are 3-sided sealing gates manufactured in square and rectangular dimensions, together with a wide range of trim levels and designs to suit a variety of applications. Operation is achieved manually by means of a hand wheel, electrically or pneumatically by actuators. Mounting options can be mainly on face wall or alternatively embedded in concrete inside channels. The whole structure is made of stainless steel grade 304L for higher corrosion resistance.

Q 3/12/10

KARKANIAS
ENVIRONMENTAL TECHNOLOGY S.A.

Design

Channel penstocks frame is welded stainless steel shaped in U-profile and is suitable for mounting by grouting or by wall mounting at the end or into an open channel. Each penstock is provided with a suitable handwheel of adequate diameter for the duty required. Gearing is supplied where is necessary to ensure that the required operating force applied by hand to the rim of the wheel does not exceed 200 N. Instead of handwheel an electric actuator can be applied. The height of the handing is approximately 1.0 m above the operating level.

Penstocks are of non-rising stem and operation is achieved by a spindle. Spindle's thread form is trapezoidal and direction of closing is clockwise. On the door is fixed the spindle nut which is made of zinc-free bronze. The door is equipped with reinforced ribs in order to withstand the applied pressure load.

Fixing nuts and bolts are made of stainless steel material with grade similar to whole structure.

Penstocks shall be water-tight under the conditions of head and direction of flow as stated in the appropriate Clause or Schedule of the Particular Specification.

KARKANIAS
ENVIRONMENTAL TECHNOLOGY S.A.

Design:

Coarse bar screens are used for the effective screening of wastewater in municipal and industrial wastewater treatment plants. They are intended for installation in pumping stations and treatment plants. The complete structure and all parts in contact with sewage are made of stainless steel AISI 304L, available in different grades upon request.

Bottom part of the structure, immersed in the channel, consists of grid bars with specific span, and a pair of sprockets with drive chains. On the upper part of the screen, the driving system is supplied with electric operation. There are two sprockets attached on each side of the driving shaft, which is driven from the gear motor. Upper sprockets drive chains on which rakes are installed. Through rakes the collected material from the bottom of the channel comes out and falls into the waste container or to a screw dewaterer conveyor.

Sprockets and chains are made from stainless steel material, similar grade to the rest of the structure.

The screen is installed in a suitable angle in order to dewater the screening on its way up to the discharge point.

The coarse screen can be provided completely closed with removable covers upon request, in order to be easily maintained. In this case odor extraction is foreseen. A system for protection against overload is included in standard version.

KARKANIAS
ENVIRONMENTAL TECHNOLOGY S.A.

STATIC SCREEN

Manufacturer General Specifications

Technical data:

Screen material	: AISI 304L
Screen width	: 800 mm
Openings width	: 50 mm

The manually cleaned static screen is used mainly in bypass channels. It is constructed by stainless steel rectangular bars 8 x 20 mm placed in vertical position with suitable space for holding solids. The vertical bars at the bottom and top of them are fastened by transverse bars, which are of the same material and same profile dimension.

The structure comprises special brackets which hold the static screen at an inclined position (angle of 70° approx.). Brackets are also corrosion-resistant with similar material to the static screen.

The construction is accompanied by a stainless steel perforated bin, which is used for collection of screenings, and a rake for removing screenings from the vertical bars of the screen.

3/12/18

KARKANIAS
ENVIRONMENTAL TECHNOLOGY S.A.

Design

The entire screw conveyor is made of stainless steel grade 304L. It consists of a shaftless spiral surrounded by a trough. Between the spiral and the trough is installed appropriate plastic material (Teflon) in order to eliminate friction. The spiral is protected by covers, attached on the trough by means of fastening screws so it can be easily cleaned and maintained. Suitable number of hoppers is installed in order to receive screenings from coarse screens.

The driving unit is connected at the one end of the screw conveyor through a drive shaft which is equipped with double sealing flange. At the other end the compacting chamber is assembled. Compaction is achieved by the mean of a barrier steel plate. Compression plate works as an obstacle during screenings transfer so they can be compressed and free of condensate before discharge to the skip. Drainage water is drained off into a collecting pipe, which will be driven to the drainage system of the plant.

The screw conveyor can be manufactured in alternative stainless steel grade upon costumer request.

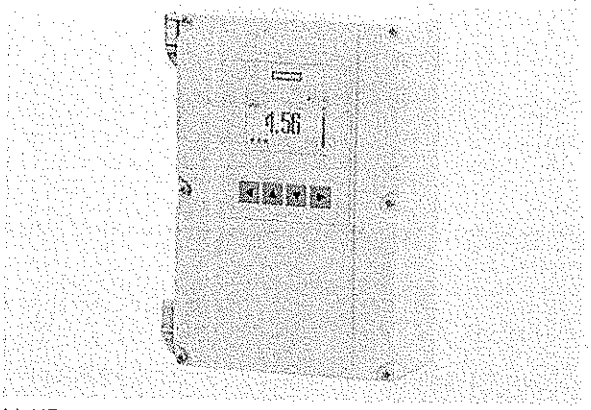
Overview



MultiRanger 200 HMI is a versatile short to medium-range ultrasonic single and multi-vessel level monitor/controller for virtually any application in a wide range of industries.

Benefits

- Easy to use HMI display with local four-button programming, menu-driven parameters, and Wizard support for key applications
- English, German, French, Spanish, Chinese, Italian, Portuguese, and Russian texts on the HMI
- Removable terminal blocks for ease of wiring
- Digital input for back-up level override from point level device
- Communication using built-in Modbus RTU via RS 485 and SIMATIC PDM configuration software
- Compatible with SmartLinx system: PROFIBUS DP (cyclic access of process values only) and DeviceNET
- Single or dual point level monitoring
- Auto False-Echo Suppression for fixed obstruction avoidance
- Differential amplifier transceiver for common mode noise reduction and improved signal-to-noise ratio
- Level, volume, and flow measurements in open channels, differential control, extended pump control, and alarm functions
- Wall and panel mounting options

Application

MultiRanger 200 HMI can be used with various materials, including, water, municipal waste, acids, woodchips, or on materials with high angles of repose. MultiRanger 200 HMI offers true dual point monitoring, digital communications with built-in Modbus RTU via RS 485, as well as compatibility with SIMATIC PDM, allowing PC configuration and set-up. MultiRanger 200 HMI features Sonic Intelligence advanced echo-processing software for increased reading reliability.

MultiRanger 200 HMI will monitor open channel flow and features more advanced relay alarming and pump control functions as well as volume conversion.

It is compatible with chemical-resistant EchoMax transducers that are approved for hostile environments.

- Key Applications: wet wells, flumes/weirs, bar screen control, hoppers, chemical storage, liquid storage, crusher bins, dry solids storage

Design

The MultiRanger 200 HMI is available in wall or panel mounting options.

Technical specifications

Mode of Operation	
Measuring principle	Ultrasonic level measurement
Measuring range	0.3 ... 15 m (1 ... 50 ft)
Measuring points	1 or 2
Input	
Analog	0 ... 20 mA or 4 ... 20 mA, from alternate device, scalable
Discrete	10 ... 50 V DC switching level Logical 0 ≤ 0.5 V DC Logical 1 = 10 ... 50 V DC max. 3 mA
Output	
EchoMax transducer	44 kHz
Ultrasonic transducer	Compatible transducers: ST-H and EchoMax series XPS-10, XPS-15/15F, and XRS-5
Relays	Rating 5 A at 250 V AC, non-inductive
mA output	0 ... 20 mA or 4 ... 20 mA
• Max. load	750 Ω, isolated
• Resolution	0.1 % of range
Accuracy	
Error in measurement	0.25 % of range or 6 mm (0.24 inch), whichever is greater
Resolution	0.1 % of measuring range[1] or 2 mm (0.08 inch), whichever is greater
Temperature compensation	• -50 ... +150 °C (-58 ... +302 °F) • Integral temperature sensor • External TS-3 temperature sensor (optional) • Programmable fixed temperature values
Rated operating conditions	
Installation conditions	
• Location	Indoor/outdoor
• Installation category	II
• Pollution degree	4
Ambient conditions	
• Ambient temperature (housing)	-20 ... +50 °C (-4 ... +122 °F)

Design	
Weight	
• Wall mount	1.22 kg (2.68 lb)
• Panel mount	1.35 kg (2.97 lb)
Material (enclosure)	Polycarbonate
Degree of protection (enclosure)	
• Wall mount	IP65/Type 4X/NEMA 4X
• Panel mount	IP54/Type 3/NEMA 3
Electrical connection	
• Transducer and mA output signal	2-core copper conductor, twisted, shielded, 0.5 ... 0.75 mm² (22 ... 18 AWG), Belden 8760 or equivalent is acceptable
• Max. separation between transducer and transceiver	365 m (1 200 ft)
Displays and controls	60 x 40 mm (2.36 x 1.57 inch) LCD 240 x 160 pixels resolution
Power supply	
AC version	100 ... 230 V AC ± 15 %, 50/60 Hz, 36 VA (17 W)
DC version	12 ... 30 V DC (20 W)
Certificates and approvals	• CE, RCM[2] • FM, $CSA_{US/C}$, UL • CSA Class I, Div. 2, Groups A, B, C, and D, Class II, Div. 2, Groups F and G, Class III (wall mount only)
Communication	• RS 232 with Modbus RTU or ASCII via RJ-11 connector • RS 485 with Modbus RTU or ASCII via terminal strips • Optional: SmartLinx cards for - PROFIBUS DPV1 (cyclic access of process values only) - DeviceNet

[1] Program range is defined as the empty distance to the face of the transducer plus any range extension
[2] EMC performance available on request

Level Measurement

Continuous level measurement - Ultrasonic controllers

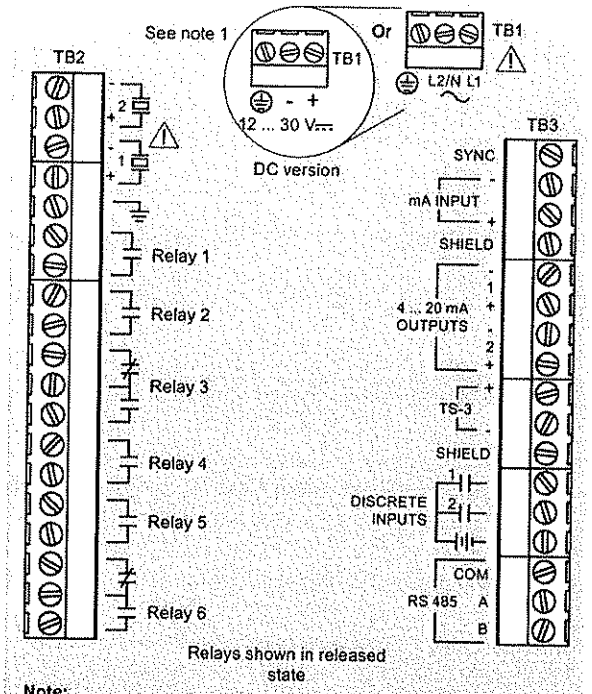
Schematics



Note:

1. Use 2-core copper wire, twisted, with shield, for expansion up to 365 m (1 200 ft). Route cable in grounded metal conduit, separate from other cables.
2. Verify that all system components are installed in accordance with instructions.
3. Connect all cable shields to the MultiRanger shield connections. Avoid differential ground potentials by not connecting cable shields to ground (earth) anywhere else.
4. Keep exposed conductors on shielded cables as short as possible to reduce noise on the line caused by stray transmissions and noise pickup.

MultiRanger 200 HMI connections

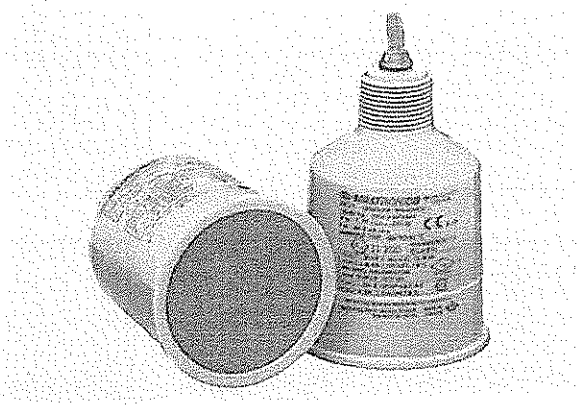
Level Measurement
Continuous level measurement - Ultrasonic transducers

Overview



EchoMax XRS-5 ultrasonic transducer provides reliable, continuous level monitoring of liquids and slurries in narrow lift stations/ wet wells, flumes, weirs and filter beds using a beam angle of just 10° and a CSM rubber face.

Benefits

- Narrow beam angle of only 10°
- Chemically resistant PVDF copolymer enclosure and CSM rubber face
- Measuring range: 8 m (26 ft) for measurement of liquids and slurries
- Fully submersible: IP68 degree of protection
- Easy installation with 1" NPT or R 1" BSPT connection

Application

The XRS-5 is non-contacting with a measuring range from 0.3 ... 8 m (1 ... 26 ft). Advanced echo processing ensures reliable data even in conditions with obstructions, turbulence and foam.

The hermetically sealed CSM rubber face and the PVDF copolymer enclosure are designed for maximum resistance to methane, salt water, caustics and harsh chemicals common to wastewater installations. With an IP68 degree of protection, this rugged sensor is fully submersible in the event of flood conditions. Use a submergence shield if full submergence is possible in the application. A submergence shield will maintain a high level reading output during submerged conditions.

The low-cost XRS-5 transducer is compatible with a full range of Siemens controllers, from a basic system for high/low alarm or simple pump control, up to advanced control systems with communications, telemetry and SCADA integration capabilities.

- Key Applications: wet wells, flumes, weirs, filter beds

Technical specifications

Mode of operation	
Measuring principle	Ultrasonic transducer
Input	
Measuring range	0.3 ... 8 m (1 ... 26 ft), dependent on application
Output	
Frequency	44 kHz
Beam angle	10°

SIEMENS

SINAMICS G120C

The compact and versatile inverter with optimum functionality

siemens.com/sinamics-g120c

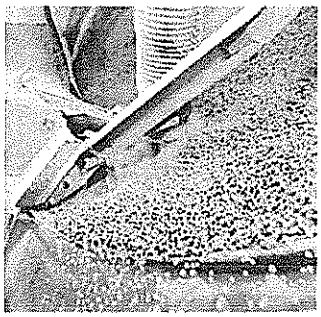
Answers for industry.

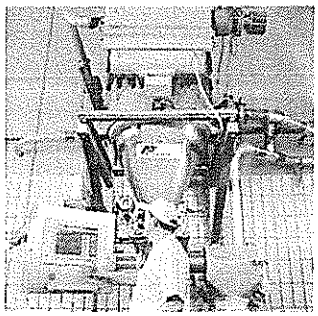
3/12/10

The compact inverter for countless applications

The SINAMICS G120C defines new standards in its class regarding size, fast commissioning, extremely simple operator control, high level of service-friendliness and highly integrated functionality.

It is predestined for machinery construction and sales through distribution channels and covers the requirements of many applications, e.g. for conveyor belts, mixers, extruders, pumps, fans, compressors and basic handling machines.



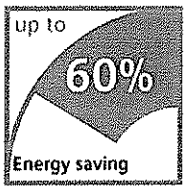


SINAMICS offers a whole raft of advantages:

- Standard operator control and functionality as a result of the common hardware and software platform
- Both low voltage as well as medium voltage
- A common engineering approach for all drives
  - SIZER for engineering
  - STARTER for parameterization and commissioning
- High degree of flexibility and combinability
- Identical options
- Minimized training costs

Decisive advantages for machinery construction

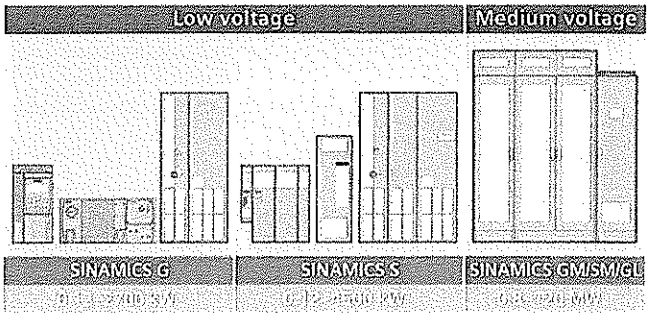
SINAMICS G120C was specifically designed for OEMs who require a cost-effective, space-saving inverter that is simple to operate and has a broad range of functions. This drive unit is especially compact with a high power density and sets itself apart as a result of its fast installation and commissioning, user-friendly connections and simple commissioning tools. Already integrated: Safety functions (STO via terminal/with PROFIsafe), drive networking via standard fieldbus systems as well as a card slot for cloning parameter sets.

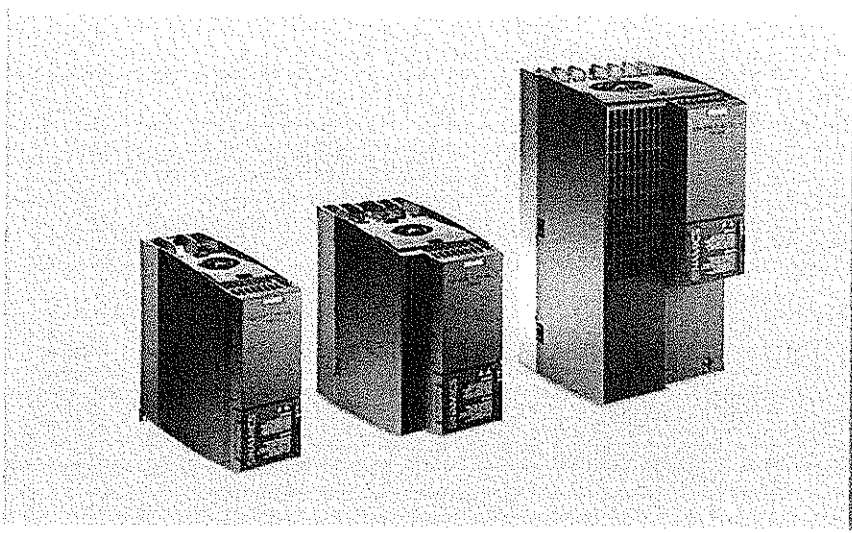


With three frame sizes, SINAMICS G120C covers a range of power ratings from 0.55 kW up to 18.5 kW. To increase the energy efficiency, the inverter is equipped with vector control to achieve optimum energy efficiency and/or has automatic flux reduction. The device is an integral component of Totally Integrated Automation and has PROFINET, PROFIBUS DP, USS/Modbus RTU as well as CANopen communication interfaces. Operation/commissioning is quickly and simply realized with a PC via USB or using the BOP-2 (Basic Operator Panel) or IOP (Intelligent Operator Panel).

SINAMICS G120C is part of the SINAMICS family

SINAMICS G120C is a member of the seamless and integrated family of SINAMICS drives – the first choice for innovative drive solutions that are fit for the future. SINAMICS offers the optimum drive for each and every application. As a consequence, all of the drives can be configured, parameterized, commissioned and operated in a standard fashion.





Highlights at a glance

Mechanical design
- Compact
- Simple commissioning and maintenance
- Side-by-side mounting without derating
- Pluggable terminals

Electronics
- Integrated braking chopper
- STO safety function
- IOP , BOP-2 and USB interface
- Optional interchangeable memory card (SD)
- Electrically isolated inputs

Communication
- PROFINET, PROFIBUS DP, CANopen, USS/Modbus RTU
- Integral component of Totally Integrated Automation
- Supported profiles: PROFIenergy and PROFIsafe

SINAMICS G120C – advantages

	G120C features	Your benefits
Small and rugged		
	• High power density, low envelope dimensions • Several devices can be mounted directly next to one another • Coated modules Operation up to an ambient temperature of 60 °C Simple installation in the smallest space	• Low space requirement • Long service life, high reliability • Can be used in small control cabinets, close to the machine
Operator friendliness		
	• Optimized parameter set • Optimized commissioning • Getting-Started document • BOP-2 and IOP operator panels can be used • Integrated USB port	• Simple and fast software parameterization • Simple operability during commissioning and in operation • Minimized training costs, utilization of already existing SINAMICS know-how • High degree of service friendliness
Installation and maintenance		
	• Pluggable terminals • Cloning function using BOP-2, IOP or SD card • G120C integrated in TIA teleservice • Operating hours counter for "Drive on" and "Motor on"	• Fast mechanical installation • Intuitive series commissioning • Integration in the automation environment • Simple maintenance
Leading technological functions		
	• Energy-efficient, encoderless vector control • Automatic flux reduction with V/f ECO • Integrated energy calculator • Safety Integrated (STO) • Supported profiles: PROFIsafe, PROFIenergy	• High control quality • Energy-efficient motor control • Energy-saving can be measured • Integrated safety functions without supplementary costs
State-of-the-art communication		
	The following versions are available: • PROFINET • PROFIBUS DP • CANopen • USS/Modbus RTU • Ethernet/IP	• Uses all of the common bus systems • Can be flexibly used • Reliable communication • Can be simply plugged in • Uninterruptible thanks to the optional 24V power supply

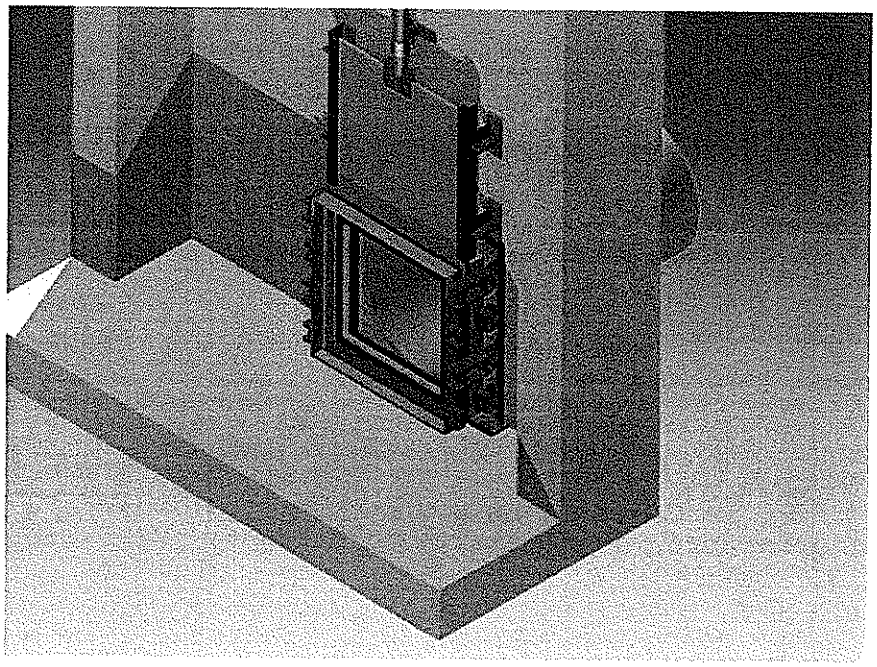
WALL PENSTOCKS

Manufacturer General Specifications



General description

Wall penstocks are 4-sided sealing gates manufactured in square and rectangular dimensions, together with a wide range of trim levels and designs to suit a variety of applications. Operation is achieved manually by means of a hand wheel, electrically or pneumatically by actuators. Electric motors and actuators are optionally offered with explosion protection in case of installation in hazardous areas. Mounting can be easily achieved on face wall of manholes (in front of wall openings or pipe endings) and in depth according to required specifications. The whole structure is made of stainless steel grade 316L for higher corrosion resistance.

23/12/18

KARKANIAS
ENVIRONMENTAL TECHNOLOGY S.A.

Design

Wall penstocks frame is welded stainless steel shaped in U-profile and is suitable for mounting on concrete walls in front of openings or pipes. Each penstock is provided with a suitable handwheel of adequate diameter for the duty required. Gearing is supplied where is necessary to ensure that the required operating force applied by hand to the rim of the wheel does not exceed 200 N. Instead of handwheel an electric actuator can be applied in line with required technical specifications. The height of the handing is approximately 1.0 m above the operating level.

Penstocks are of non-rising stem and operation is achieved by a spindle. Spindle's thread form is trapezoidal and direction of closing is clockwise. On the door is fixed the spindle nut which is made of zinc-free bronze. The door is equipped with reinforced ribs in order to withstand the applied pressure load.

Fixing nuts and bolts are made of stainless steel material with grade similar to whole structure.

Penstocks shall be water-tight under the conditions of head and direction of flow as stated in the appropriate Clause or Schedule of the Particular Specification.

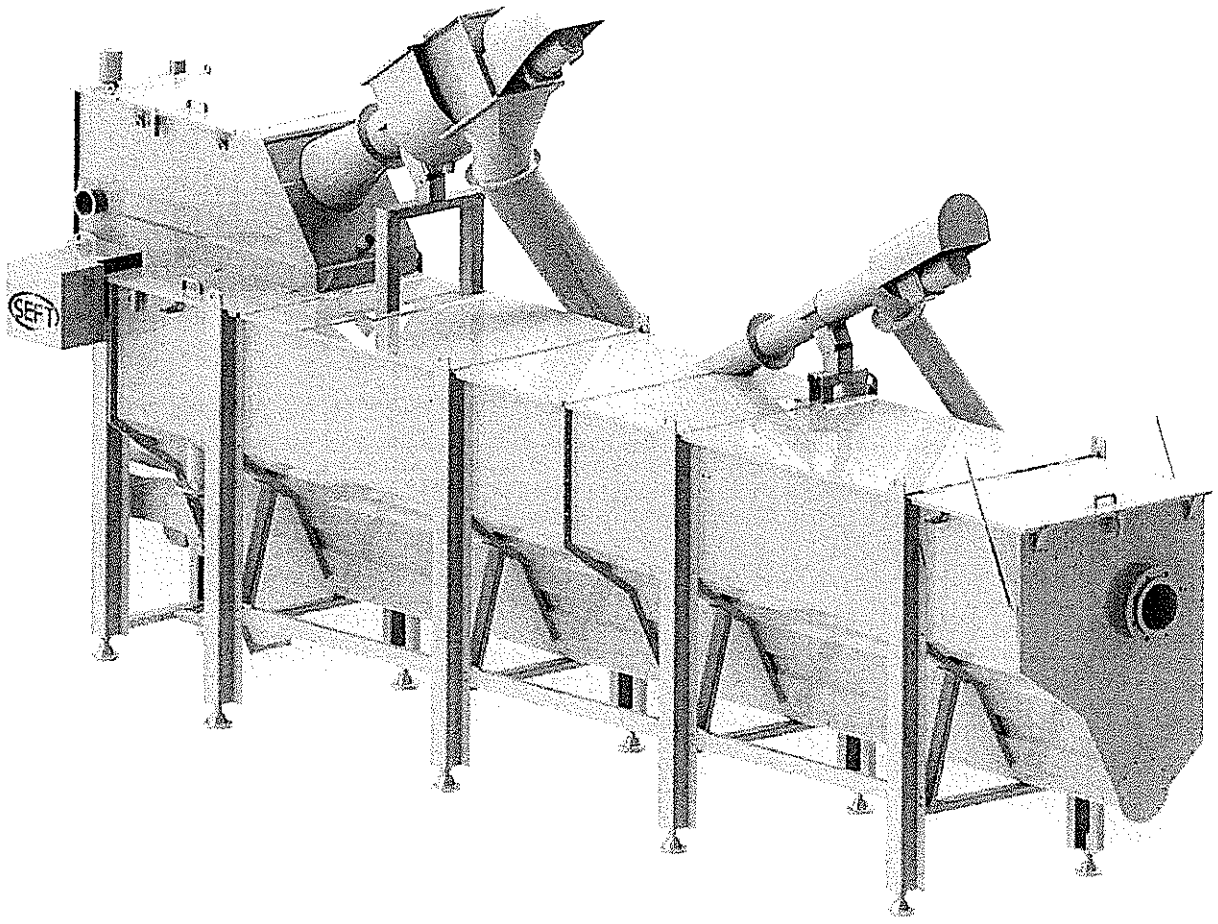
4. MECHANICAL WASTEWATER PRETREATMENT UNIT

03/12/18

GDF



IMPIANTO DI PRE TRATTAMENTO COMPATTO

PRE-TREATMENT COMBINED COMPACT UNIT

03/12/18

GDF - IMPIANTO DI PRE TRATTAMENTO COMPATTOI

Questa macchina combinata viene alimentata da una pompa oppure per gravità, attraverso una tubazione fissa.
Il refluo passa attraverso una filtrococlea che rimuove le particelle solide più grosse, poi giunge in una vasca di sedimentazione dove le particelle sedimentate vengono poi rimosse da un sistema di coclee.
Come optional è possibile installare il sistema di rimozione dei grassi e degli oli sospesi.

FUNZIONI
- Filtrazione
- Lavaggio/compattazione dei solidi rimossi
- Estrazione sabbie
- Degrassatura (versione GDF/D)

VANTAGGI
- Assenza di odori
- Assenza di bloccaggi
- Bassi costi di gestione e manutenzione
- Ridotti spazi richiesti
- Lavori edili non necessari
- Facilità di installazione e gestione
- Bassi residui di materia organica nel solido estratto
- Riduzione fino al 40% in volume dei solidi rimossi

CARATTERISTICHE COSTRUTTIVE

Portata in ingresso	Fino a 150 lt./sec.
Foratura vaglio	ø 3 ÷ ø 7 mm foro tondo

GDF - PRE-TREATMENT COMBINED COMPACT UNIT

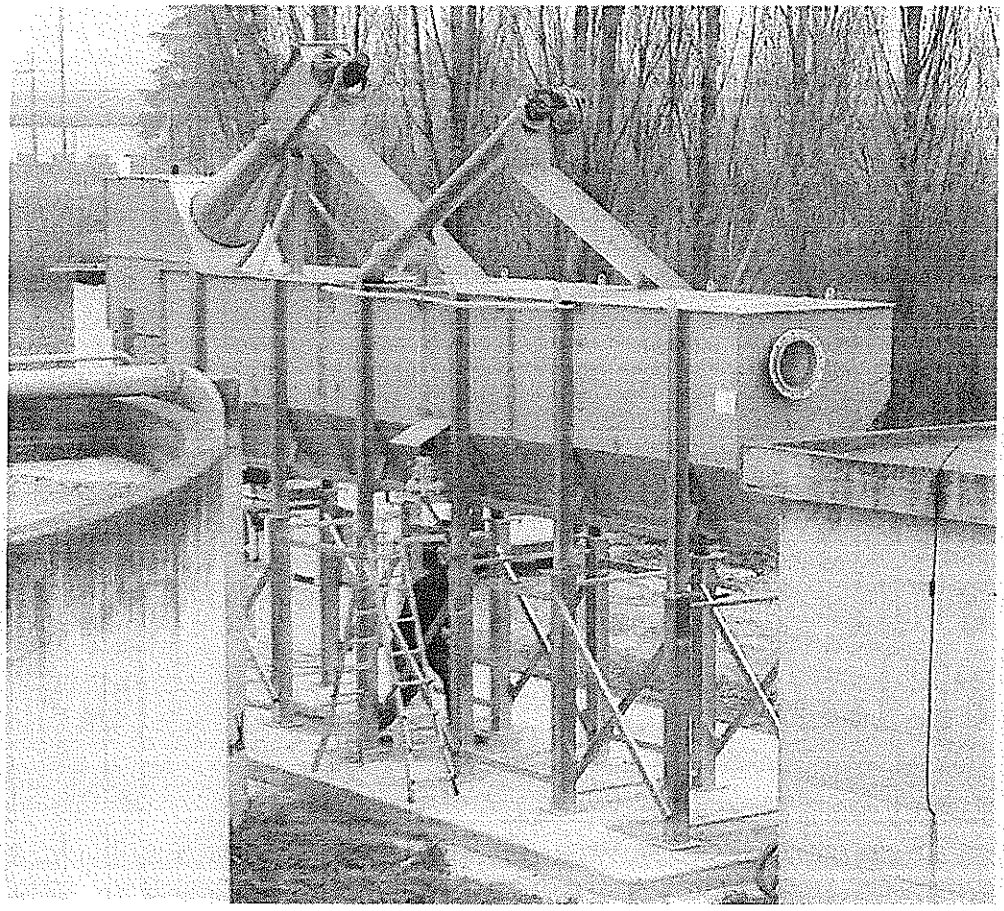
This combined machine is fed by a pump or to gravity, through a fixed pipe.
The effluent passes through a screw screen that removes the most large solid particles, then goes to a sedimentation tank where the particles sedimented are then removed by a system of scews.
As an option you can install the system for removal of fats and suspended oils.

FEATURES
- *Filtration*
- *Wash / compaction of solids removed*
- *Extraction of sand*
- *Degreasing (on GDF/D version)*

ADVANTAGES
- *No odor*
- *Low operating costs and maintenance*
- *Reduced space requested*
- *Construction work is not necessary*
- *Ease of installation and management*
- *Low organic matter in the solid residue extracted*
- *Up to 40% by volume of solids removed*

MANUFACTURING FEATURES

Inlet flow rate	*up to 150 lt./sec.*
Filtering options	*ø 3 ÷ ø 7 mm holes*



03/12/18

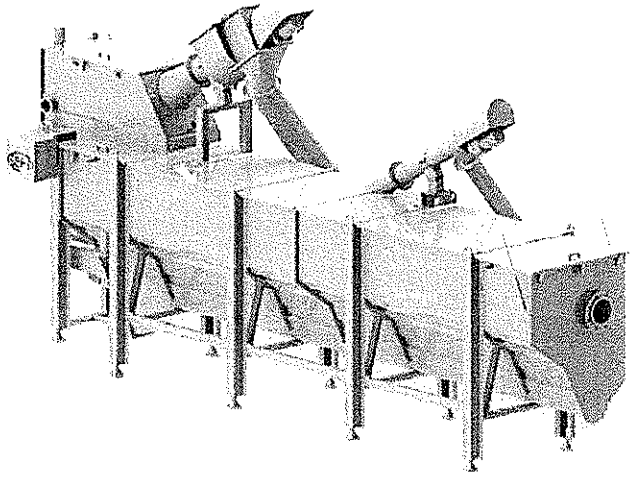
GDF/D 30 Combined wastewater pre-treatment unit

This combined machine is fed by a pump or to gravity, through a fixed pipe.
The effluent passes through a screw screen that removes the most large solid particles, then goes to a sedimentation tank where the particles sedimented are then removed by a system of scews.
As an option you can install the system for removal of fats and suspended oils.



Inlet Flow = 30 l/s

Average characteristics of reference for wastewater: TSS = 500 ppm, sand content 0,5%

Average performances: efficiency up to 90% for sand removal of particles > 200µm and density above 1,65 Kg/dm3.

Screenings weight and volume reduction: up to 30-40%

Screw screen FCP/C 50 with compaction:
Loading basket diameter: **Ø456 mm**
Screw diameter for transport / compaction: Ø219 mm
Filtration type: rounded holes
Dimension: **Ø6 mm**
Inclination: 35°
Squared outlet spout for screening discharge
Basket cleaning through nylon bolted brushes
Motor 1,1 kW, 400V – 50Hz – 3 phases, 4 poles, IP55, F class
Gear reducer, endless screw, 11 rpm

Sand settling tank
Horizontal screw conveyor and sand transport mod. TSA 200
Shaft less screw diameter: Ø180mm
High carbon steel single profile, pitch 1/1, thick. 20mm
With mechanical water tight group.
Motor 0,55 kW, 400V – 50Hz – 3 phases, 4 poles, IP55, F class
Gear reducer, endless screw, 5 rpm

03/12/18

Pull execution
Sand extraction screw conveyor mod. TSA"T" 168
Shaft less screw diameter: Ø168mm
High carbon steel single profile, pitch 1/1, thick. 20mm
With mechanical water tight group.
Motor 0,37 kW, 400V – 50Hz – 3 phases, 4 poles, IP55, F class
Gear reducer, endless screw, 5 rpm
Pull execution

Air blowing system

External structure in stainless steel AISI316 L
Tanks in stainless steel AISI316 L
Shaft less spirals in high carbon steel painted RAL6029
Bolts in A2
Anti-wear material: bolted plates in stainless steel AISI316 L
Inlet: alum. DN250 PN10
Outlet: alum. DN250 PN10
Degreasing outlet: Flanged alum. DN100 PN10

Grease / Oil removal "go & back carriage" system
Motor 0,37 kW, 400V – 50Hz – 3 phases, 4 poles, IP55, F class

Overall dimensions:
Total length: 7.000 mm
Settling tank length: 6.000 mm
Total width: 1.420 mm
Total height after installation: 3.050 mm

Including:
Heating system kit for compaction zone (suitable for use up to 0°C)
Heating system kit for transport zone (suitable for use up to 0°C)
Washing system on compaction zone with manual valve
PE breathing valve on screw screen tank
Discharging chutes for screenings in AISI316 L (LENGTH = 2000 mm)
PE pipe for returning liquid of compaction zone
Rod level sensor on screw screen tank
Safety limit-switches for opening hatches
Warning stickers on unit parts at risk of intrusion
Eyebolts

Not included:
Control panel & wiring connection
Hydraulic connections
Electrical air blower
Potential scaffolding

Consumption:
Water for compaction washing system: 0.5 lt./sec. @ max 5bar
Compressed air for air blowing system: 25 Nm3/h @ 0.15bar

Test:
Running test with empty tanks in our workshop
Settling tank filling with clear water for water tight test

03/12/18

OPTIONS

BYPASS internal with static bars
Structure in stainless steel AISI304L
Bars material: bolted plates in stainless steel AISI304 L
Bars spacing: 15 mm
Bar thickness: 30 x 8 mm
Bar inclination : 75 °

Control panel
PLC Protection degree IP65, 400 V
In fiberglass with buttons at sight + Emergency button
Manual start/stop and automatic cycle start/stop selectors
Warning lights for: line presence, machine running, thermal alarm
Documentation: control panel electrical diagram + CE conformity declaration
Predisposition for remote control for start/stop with thermal alarm signal
Wiring included
Ventilation (if necessary)
Heating included
Consumption and working hours
Communication card for industrial protocol included

Electrical Blower
Flow rate: 25 m3/h
Pressure: 150 mbar
Motor: 0,25 kW 380V, 50hz, 3phases, IP55 grade, F class
1" fitting
Side installation, with stainless steel hoses
Retention valve, Suction filter, Pressure valve
Wiring and installation included

Grease Pump
Brand: SYDEX
Flow rate: 400 lt/h (90rpm)
Pressure: 4 bar
Motor: 1,1 kW, 2,45A, 380V, 50hz, 3phases, IP55

Remarks regarding the selection process

The mixing result depends on the functional quality of the plant equipment in the mechanical treatment stage (preliminary treatment). Mineral fractions (grit and sand) must be always excluded from the process and cannot be kept in suspension. It is absolutely required to check the values mentioned above with the actual values on site.

Selection of submersible mixers

Proposal

Type	TR 50-2.34-4/12 S	
Quantity	1	
Frequency	50	Hz
Rated power	4,5	kW
Propeller speed	338	1/min
Power factor (ISO 21630)	220	N/kW
Propeller diameter	0,5	m
Maximum power input	5,8	kW
Power input in duty point	*1 4,4	kW
System-dependent power input	*2 4,4	kW
Power density	*3 12,1	W/m³
System-dependent power density	*4 12,1	W/m³
Distance to water surface	0,9	m

*1 Measurement at static thrust acc. to ISO 21630 (inflow velocity ~0, Open Sea conditions).
*2 The power consumption of the mixer will be reduced in proportion to the flow velocity which is generated in the tank.
*3 According to ISO 21630.
*4 According to site conditions.

Important note

Installation of the mixer(s) according to installation sketch. Before installing the mixers, the up-to-date tank plans must be submitted without previous request to WILO SE, Hof for revision.

To guarantee a continuous operation, the minimum water cover above the propeller specified by WILO must be ensured.
Please check if our basic data are identical to your application and, if necessary, inform us in writing about modifications/objections. The aforementioned mixer(s) selection data are integral part of our warranty, whereas our warranty comes only into effect, when the submersible mixers are installed according to our recommendation. Because the overall function depends considerably on the correct positioning of the submersible mixers, we will not accept any warranty claims which result from positioning which we did not approve explicitly. Also zones of weak flow due to the tank geometry are not part of our warranty. The values of maximum power input, power input in the duty point and energy density are valid for clean water. Furthermore the use of our submersible mixers in patented procedures or under trade mark rights of third parties is excluded from our liability.

[1]In case of rectangular or round tanks the average flow velocity above the tank section cannot be guaranteed.
For the selected tank shape no directed circulating flow can be generated for physical reasons. The calculated average flow velocity refers only to an undirected turbulent flow.

All attached notes relating to the product and the selection are part of the technical selection of WILO SE.

Hints

The enclosed installation proposal is a schematic drawing and not according to scale. It serves as orientation guide. In case of order, the feasibility of this installation has to be matched with the tank drawing and the actual conditions. If there is an inflow and/or outflow in the immediate vicinity of the mixer, the mixer position must be checked based on updated tank plans to avoid bad influences on the mixer and short-circuit flows.

Covered Bottom Area 5 %
Number of Aerated Zones 2 no.

Tank dimensions

Racetrack / Circular bend

Length of middle wall	21.00 m	Depth	5.00 m
Width	4.50 m	Central Guidevanes	

Product data

Number of mixers	**2**	
Mixer type	**4410**	**without jetring**
Propeller code	**400**	**Polyurethane**

Nominal thrust	1910	N	Frequency	50	Hz
Rated shaft power	2.30	kW	Phases	3	
Max input power	3.10	kW	Poles	4	
Propeller diameter	2.50	m	Approval	STD	
Propeller speed	27	rpm	Rated temperature	40 °C / 104 °F	

Thrust produced/mixer	1359	N	(2717 N total thrust produced)
Power uptake/mixer	1.78	kW	(57% of max input power)
Total thrust required	2598	N	
Recom. Min submergence	0.48	m	(Surface to propeller tip)

For mixer performance tolerances, refer to the mixer data chart.
Xylem guarantees that the proposed mixer selection will perform the specified duty when all mixers are operating positioned according to Xylem's recommendation. The selection is a function of the input data and the supplier of the data is fully responsible for its correctness.

1 Technical specification

1.1 Product description

Usage

Mixer intended for mixing liquid and sludge containing fibers and solids where very high thrust in relation to consumed power is wanted. The mixer is designed to be operated completely immersed in the liquid.

Denomination

Standard version	Explosion proof version
4410.011	4410.090
4430.010	4430.090
4460.010, 4460.020	4460.090

Hydraulic unit

Thin-sectioned, non-clogging, backswept propeller with double-curved blades.

Installation

Tripod guide bar system, 100×100 mm (4×4 in), or 100×150 mm (4×6 in)

Monitoring equipment

- Thermal contacts opening at 125°C, (257°F)
- 4460.020: Thermal contacts opening at 140°C, (284°F)
- Leakage sensor in stator housing (FLS), optional
- Leakage sensor in oil housing (CLS), optional. CLS is not applicable to Ex-approved products.
- 4460.020: Leakage sensors are not available.

Cables

SUBCAB® heavy-duty submersible cable

Materials

Item	Material
Gear housing	Cast iron, ASTM 35B
Stator housing	Cast iron, ASTM 35B
Oil housing	Cast iron, ASTM 35B
Shaft	Stainless steel, ASTM/AISI 431
Propeller blades	Reinforced polyurethane plastic
Hub	Cast iron, ASTM 35B
Lifting device	Stainless steel ASTM 316L
Stand unit	Stainless steel ASTM 316L
Oil, oil housing	Paraffin oil ISO VG32
Oil, gear housing	• Mineral oil with additives, viscosity close to ISO VG 220 • 4460 optional configuration up to 60°C (140°F): Mineral oil with additives, viscosity close to ISO VG 680
O-rings	Nitrile rubber

Surface treatment

Two-component top coating on primer.

03/12/18

- Standard version
- Optional corrosion resistant version
- Optional MBBR wear resistant version

Color: Navy Gray on cast iron parts.

Shaft seals

Inner seals	Outer seal
Lip seals	Corrosion resistant cemented carbide (WCCR) / WCCR

Options and accessories

- Installation systems
- Lifting equipment
- Special cables
- Zinc anodes
- Electrical equipment such as control panels, monitoring equipment, variable frequency drives

Dimensions and weight

See the dimensional drawing.

1.2 Application limits

Data	Description
Liquid temperature	Maximum 40°C (104°F) 4460: Optional configuration up to 60°C (140°F)
Liquid viscosity	Maximum 5000 cp
pH of the mixed liquid	6–11
Depth of immersion	Maximum 20 m (65 ft)

1.3 Motor data

Feature	Description
Motor type	4410: Squirrel-cage 4- or 6-pole induction motor 4430: Squirrel-cage 2- or 4-pole induction motor 4460: Squirrel-cage 2- or 4-pole induction motor
Frequency	50 Hz
Supply	3-phase
Starting method	• Direct on-line • Star-delta • VFD
Maximum starts per hour	30 evenly-spaced starts per hour
Voltage variation	• Continuously running: Maximum ±5% • Intermittently running: Maximum ±10%
Voltage imbalance between the phases	Maximum 2%
Stator insulation	In accordance with class H (180°C, 356°F), trickle impregnated

03/12/18

1.4 Motor Rating

Table 1: 400V, 50 Hz, 3-phase

Product	Propeller diameter, maximum mm	Rotations per minute, rpm	Poles	Rated Power, kW	Rated Current, A	Starting Current, A	Power factor cosφ
4410	2500	1385	4	2.3	5.5	24	0.82

Xylem |'zīləm|

1) The tissue in plants that brings water upward from the roots
2) A leading global water technology company

We're a global team unified in a common purpose: creating innovative solutions to meet our world's water needs. Developing new technologies that will improve the way water is used, conserved, and re-used in the future is central to our work. We move, treat, analyze, and return water to the environment, and we help people use water efficiently, in their homes, buildings, factories and farms. In more than 150 countries, we have strong, long-standing relationships with customers who know us for our powerful combination of leading product brands and applications expertise, backed by a legacy of innovation.

For more information on how Xylem can help you, go to xyleminc.com

Refer to www.xylemwatersolutions.com/contacts/ for contact details of your local sales and service representative.

DNV·GL

MANAGEMENT SYSTEM CERTIFICATE

Certificate No:
2007-SKM-AQ-2512 / 2007-SKM-AE-1239

Initial certification date:
13, June, 2007

Valid:
31, December, 2016 -15, September, 2018

This is to certify that the management system of

Xylem Europe

Bleicheplatz 6, 8200 SCHAFFHAUSEN, Switzerland
and the sites as mentioned in the appendix accompanying this certificate

has been found to conform to the Management System standards:
ISO 9001:2008/ ISO 14001:2004
(See specification in Appendix)

This certificate is valid for the following scope:
Providing water, wastewater and fluid technologies and solutions including associated parts and services.

Place and date:
Solna, 21, December, 2016

SWEDAC ACKREDITERING
1053
ISO/IEC 17021

For the issuing office:
DNV GL - Business Assurance
Box 6046/Hemvärnsgatan 9, 171 06,
Solna, Sweden

Ann-Louise Pått
Management Representative

Lack of fulfilment of conditions as set out in the Certification Agreement may render this Certificate invalid.
ACCREDITED UNIT: DNV GL Business Assurance Sweden AB, Box 6046, 171 06 Solna. Sweden. TEL: +46 8 587 940 00. http://assurance.dnvgl.com

03/12/18

Certificate No: 2007-SKM-AQ-2512 / 2007-SKM-AE-1239
Place and date: Solna, 21, December, 2016

Appendix to Certificate

Xylem Europe GmbH
Locations included in the certification are as follows:

Site Name	Site Address	Site Scope	ISO 9001	ISO 14001

Wastewater Treatment
Biogas
Sewage Handling
Tertiary Treatment for Wastewater

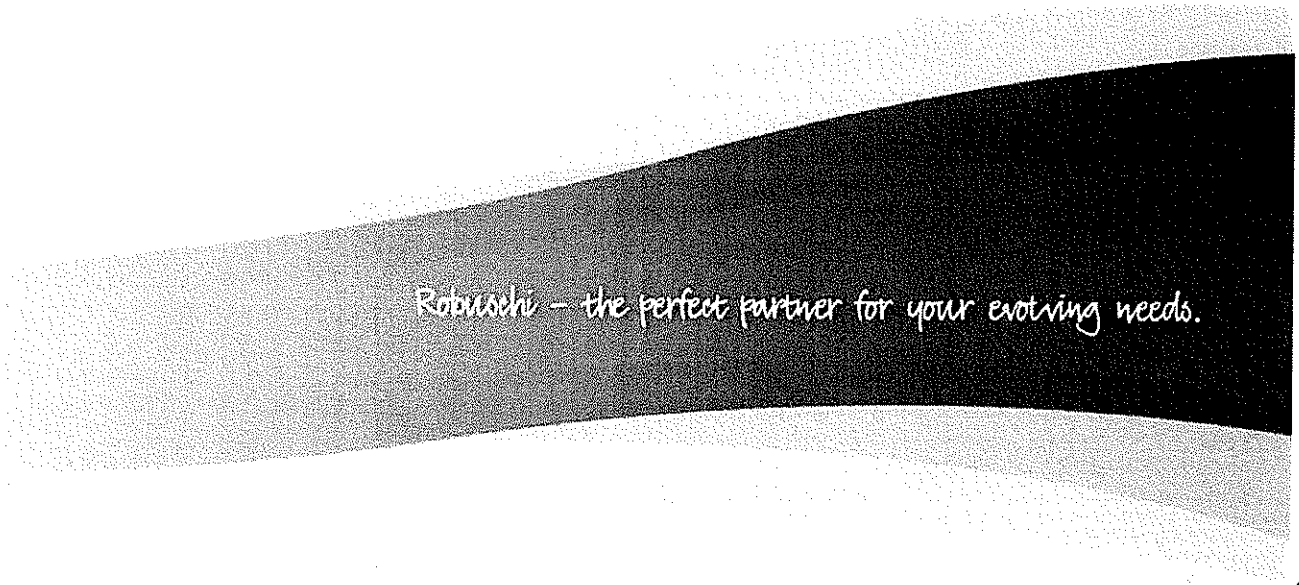
In a competitive and evolving global market, our long history of supplying aeration equipment in wastewater treatment plants that best meets customer specific requirements, makes Robuschi a trusted and reliable partner for the environmental industry. Cost-effective solutions for new plants or refurbishments of existing installations are a major focus of our product excellence and application expertise.

Nowadays, our strategy of combining products and services extends to an ever-wider array of environmental solutions, such us -biogas, mechanical vapor recompression, sewage handling and many more.

Therefore, as a global supplier of environmental solutions, we lead the market in developing innovative technologies that support our customers in reducing life cycle costs, increasing efficiency, meeting legal requirements and, finally, improving the quality of product or services they want to provide to their own customers.

Ecological sustainability is part of the Robuschi strategy, focusing on promoting environmentally friendly solutions, enhancing energy saving and protecting natural resources.

- **Top energy efficiency**
- **Low life cycle costs**
- **Low noise operation**
- **Ease of maintenance**
- **Tailor-made offer**



03/12/18

Environmental Specialist

- **Energy efficiency**
  In wastewater treatment plants power consumption mainly comes from aeration machines.
  Robuschi screw compressors can provide significant energy saving, depending on plant configuration.

- **Oil free**
  Environmental processes require clean and oil free air.
  Robuschi packages are totally oil free (Class 0 certification, according to ISO 8573-1).

- **Flexibility**
  More and more applications demand high turn down capability along with intermittent mode operation.
  Robuschi PD blowers and screw compressors perfectly fit this requirement.

- **Low noise**
  Low noise emission is one of the main evaluation criteria for residential areas and industrial facilities.
  All Robuschi packages have been designed for reducing the noise impact, satisfying customer requirements.

- **User and maintenance friendly**
  Thanks to its simple and robust design, all Robuschi equipment demands little maintenance during its operation and when the machines need to be serviced; every operation is easy and quick.

- **References**
  We are one of the leading suppliers of state-of-the art vacuum and pressure technology for environmental applications.
  Robuschi customers, all over the world, from municipalities to consultants, have put their trust into our engineers and products.
  We are the benchmark for the industry and will continue to work closely with our business partners around the globe.

Robuschi Solutions

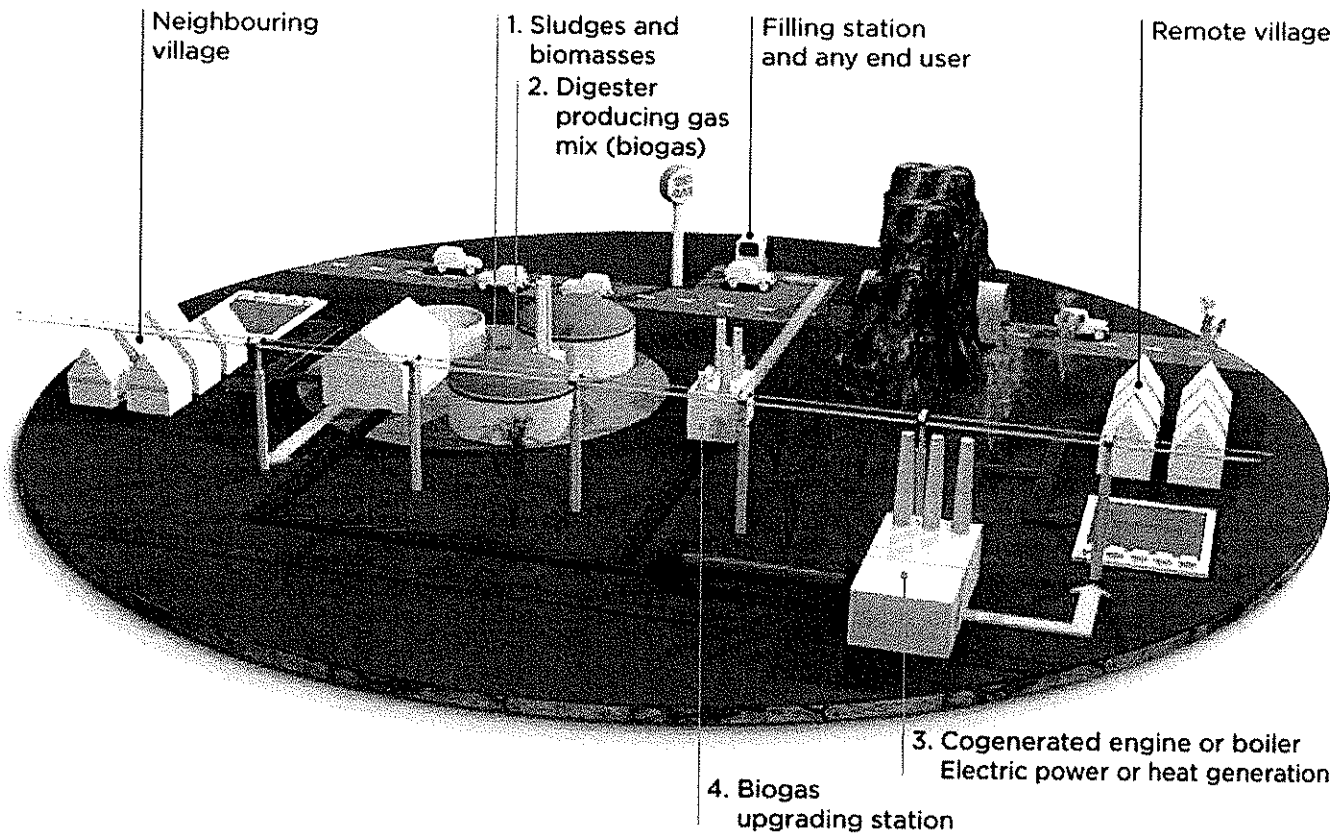
Biogas



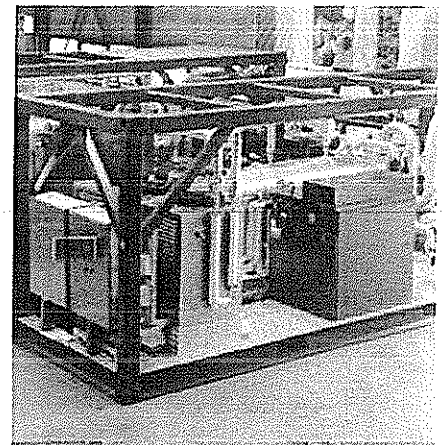
1 Centrifugal Pump
PROMIX (stainless steel execution) - UNI PN 10 - capacity up to 700 m³/h

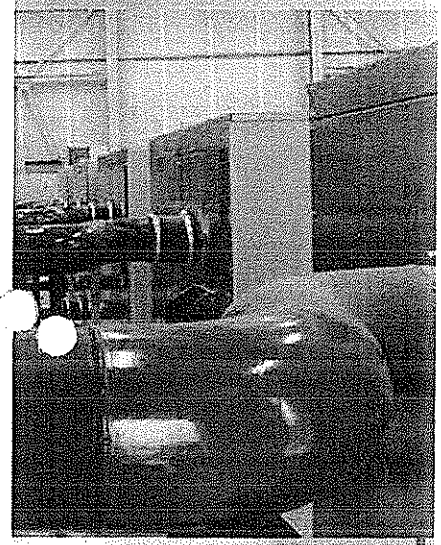
2 Liquid Ring Compressor
RVS - pressure up to 2,000 mbar (g) - capacity up to 4,200 m³/h

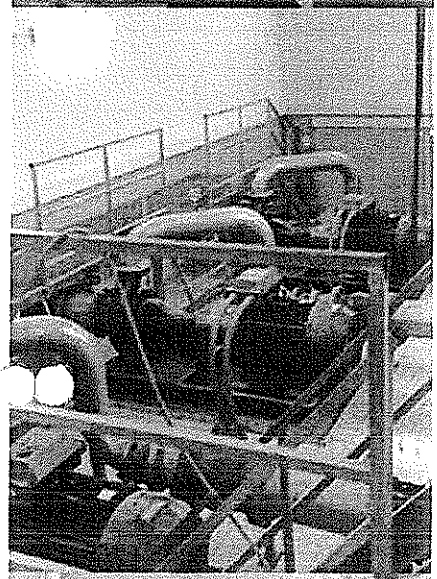
3-4 PD Blower for Biogas
CRBIO - GRBIO up to 400 mbar (g) - capacity up to 3,280 m³/h
ROBOX evolution BIOGAS up to 1,000 mbar (g) - capacity up to 2,850 m³/h

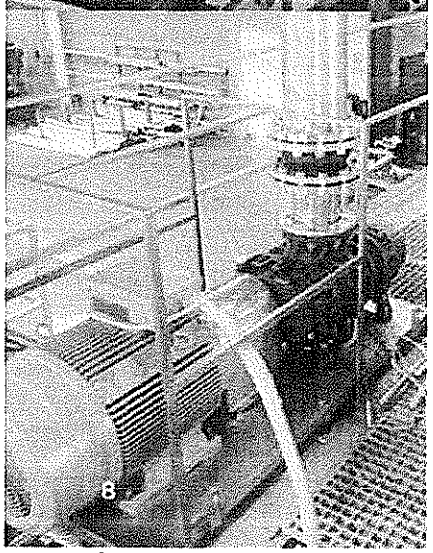
ROBUSCHI

03/12/18









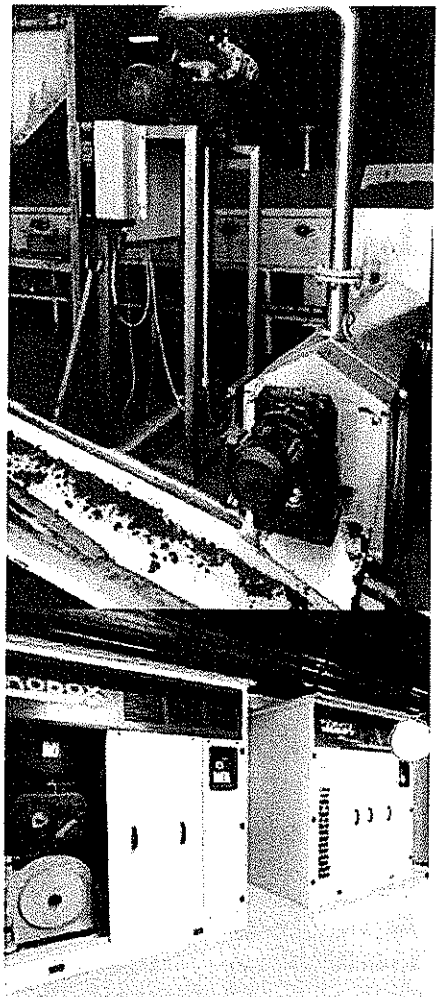
Effective Solutions for Environmental Processes

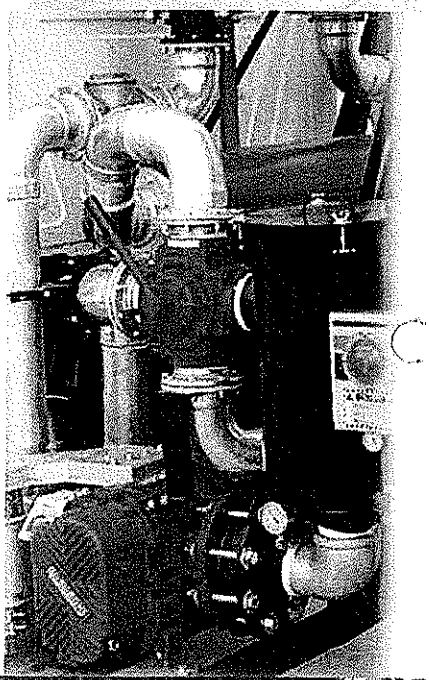
The spectrum of applications and the process complexity in the environmental industry need the choice of specific products. Thanks to its wide range of technologies, Robuschi manages to offer the most suitable one, providing a solution that combines superior efficiency, small footprint, minimum maintenance and operating costs, long service life and low noise emission.

Application	Description	Products
Primary sedimentation	In the primary sedimentation stage, sewage flows through large tanks. These tanks are used to settle sludge while the grease and oil rises to the surface and is skimmed off. Primary settling tanks are usually equipped with mechanically-driven scrapers that drive the collected sludge continually towards a hopper in the base of the tank where it is pumped to treatment facilities using PD blowers or similar technologies. As a result biological materials remain on the surface and the heavy components (mainly sand) are isolated.	**PD Blowers** **Screw Compressors**
Aeration process in wastewater treatment plants	The aeration tanks in wastewater treatment plants are activated with oxygen by using compressed air. A thorough mixing of the sludge with oxygen increases the gas yield and reduces its retention time in the tank. Even better results are achieved with warm compressed air. Blower or screw blower technologies can be found in various types of wastewater treatment plants,including aerobic activated sludge systems, SBR, nitrification-denitrification in a single basin and MBR.	**PD Blowers** **Screw Compressors**
Desalinisation	Desalinisation is the process of removing dissolved salts from seawater or brackish water. Desalting technologies can be used for many applications, most commonly to produce potable water for domestic or municipal purposes.	**PD Blowers** **Screw Compressors**

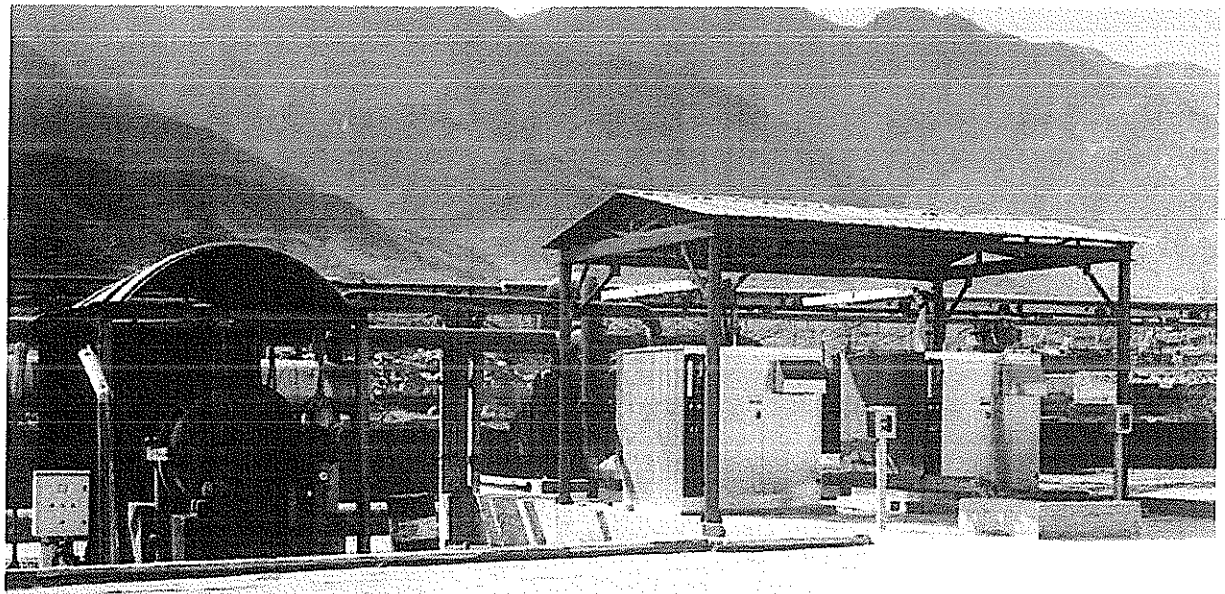
03/12/18

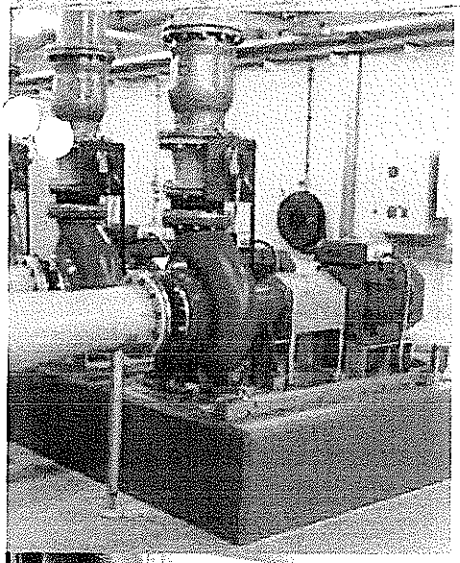
Application	Description	Products
Slurry liquid pumping	Using slurry pumps, tough, abrasive, viscous liquids and particles in suspension can be transferred from one tank to another of the wastewater treatment plant.	**Centrifugal Pumps**
Back washing sand Filtration	Air is used to expand the filter bed, breaking up compacted material. Clean backwash water is pumped in, suspending the loose material from where the particles are lifted through and carried away.	**PD Blowers** **Screw Compressors**
Biogas production	The biomass produced in activated sludge and clarifying tanks is stabilised in the digestion tower and used to produce biogas. A thorough mixing of the sludge increases the gas yield and reduces its retention time in the reactor. During the process, gas is withdrawn from the upper part of the digestion tower, compressed and reintroduced through the nozzles at the bottom.	**Liquid Ring Compressors** **Centrifugal Pumps**
Biogas recovery	This is the process of transfering the biogas from the digestor to the endothermic coogenerating engine or from digestors to upgrading stations.	**PD Blowers Biogas**
Slurry drying process	Farm processes install a phase-separation plant to dry slurryusing PD blowers for vapour recompression processing.	**PD Blowers**

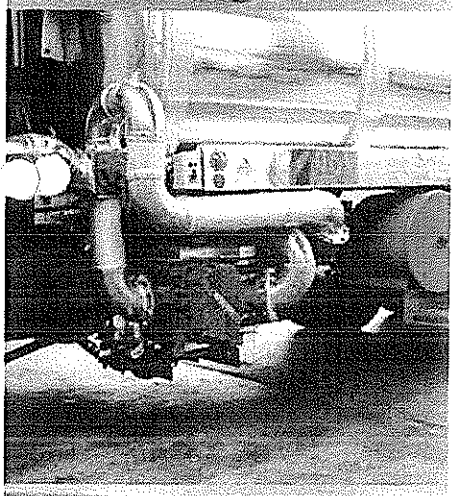


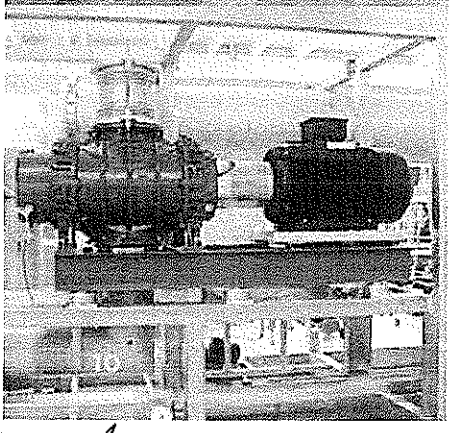


03/12/18



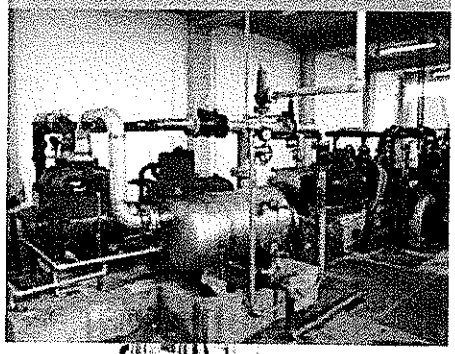




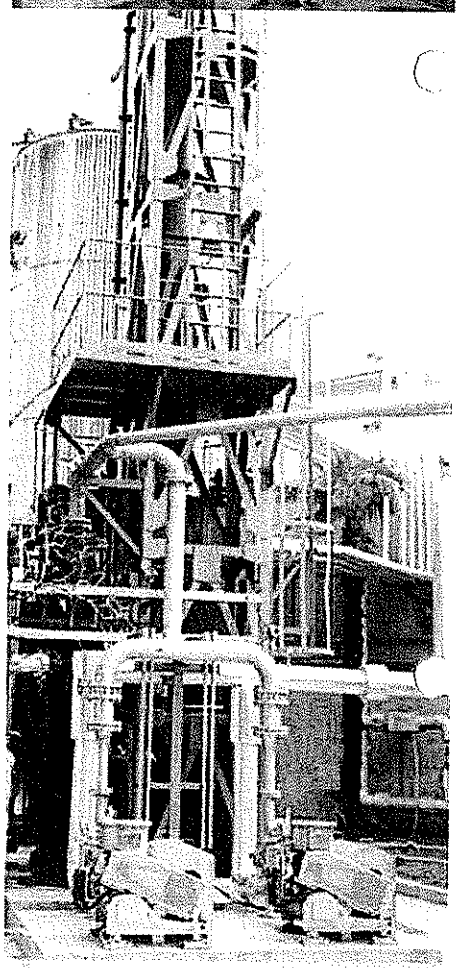


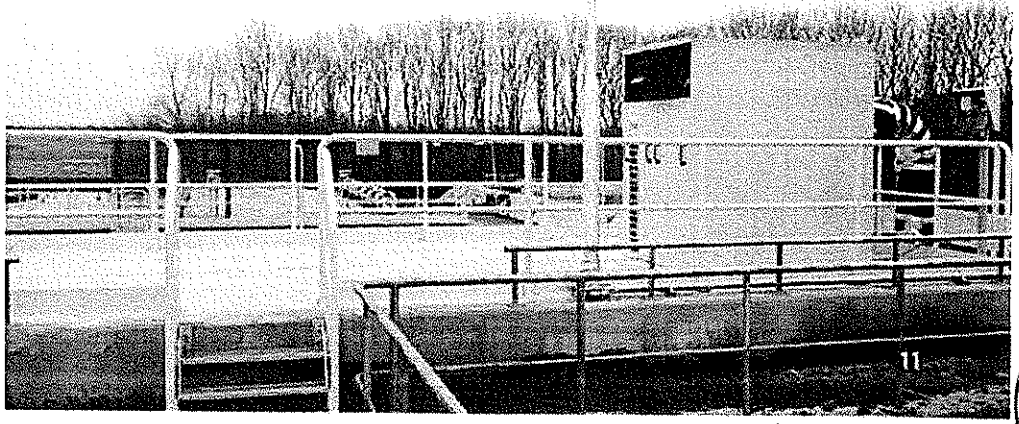
Application	Description	Products
Fish pond aeration	The water's oxygen content can be substantially increased using PD blowers, which increases the volumes of fish that can be kept in a pond. In this process, air is drawn from the atmosphere and forced through an inlet into the tube aerator. It is then diffused into the water through tiny openings and rises in fine bubbles. The oxygen in the water causes the fish to grow and multiply more rapidly, significantly increasing the yield.	**PD Blowers** **Screw Compressors**
Landfill gas recovery	The digestion of covered household waste produces landfill gas. The gas is collected and removed from the landfill, where it is compressed by gas compressors or blowers. This gas can then be used as a heating fuel, converted into electricity or used as liquefied gas.	**PD Blowers Biogas**
Soil gas extraction	This is an approved method for the reclamation of soil polluted with hydrocarbons. Depending on the volume, distribution and saturation pressure of the pollutants and the air flow through the soil, vacuum blowers are used with operating depth range between 10 - 80 m. Disposal of the extracted air must be carried out in compliance with air quality legislation.	**Vacuum Blowers**

03/12/18



Application	Description	Products
Suction vehicles for wastewater	Vacuum pumps provide suction pressure for removing and flushing out contaminants in wastewater and for cleaning sewer networks.	**Vacuum Blowers**
Mechanical vapor compression & recompression	This process uses thermo-compression to extract water as clean condensate from polluted fluids. Because only the heavy residuals are required to be sent for further treatment, a considerable amount of water is recyclable. The distillation process acts inside an evaporator, where a PD blower is used to pressurise the vapor, in order to produce clean water condensate. Since this vapour is generally acidic and chemically aggressive, the PD blower must be encased in stainless steel and use special seals, to avoid the vapour contact the oil pumps.	**PD Blowers**
Truck-Hydroexcavation	The process uses pressurised water and an industrial-strength vacuum to excavate and evacuate soil simultaneously. After the soil is broken up, it is conveyed by vacuum, along with the water slurry to a debris tank.	**Vacuum Blowers**

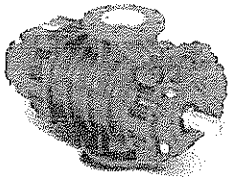




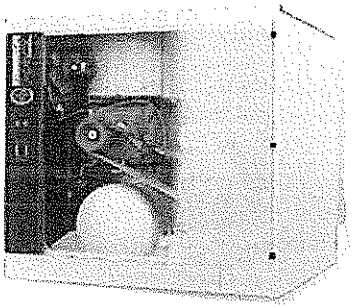
03/12/18

Product Range

PD Blowers

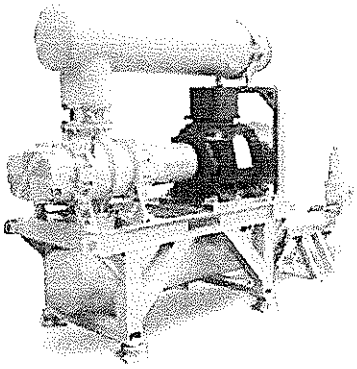


RBS is the innovative three lobe rotary positive displacement blower equipped with a special low pulse system to reduce pressure pulsations.



ROBOX evolution is the low pressure blower package, based on RBS series, operated by an electric motor through a special belt drive, including all accessories and noise enclosure.

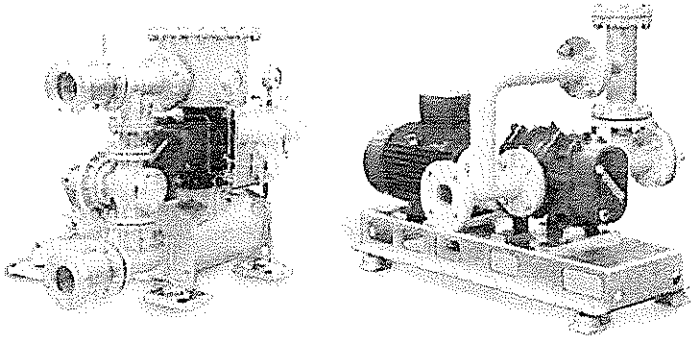
- Robust
- Cost efficient
- Dry running (Class 0 certification, according to ISO 8573-1)
- Maintenance friendly



CRBS - GRBS consist of table top blower packages with RBS series and fitted with all the necessary accessories.

ROBOX evolution BIOGAS and **CRBIO - GRBIO** are blower packages, especially developed for the conveying and compression of biogas, as well as natural and landfill gases.

- Reliable
- Safe
- Resistant
- Full range of accessories
- ATEX certification
- Customised solutions for different biogas applications



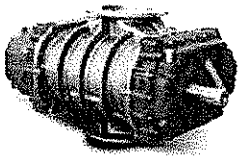
03/12/18

Product Range

PD Blowers

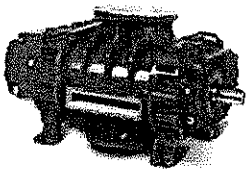
RBS INOX
All components in the PD blower series are constructed from stainless steel (AISI 316 or DUPLEX), to provide excellent corrosion resistance in a variety of heavy-duty applications such as wastewater treatment, ozone and evaporation processes.

- Different configurations available with various sealing systems
- Excellent resistance to corrosion
- Maintenance friendly



RB-DV (air injection vacuum blower) are three-lobe rotary blowers suitable to operate as dry exhausters up to 90% of vacuum.

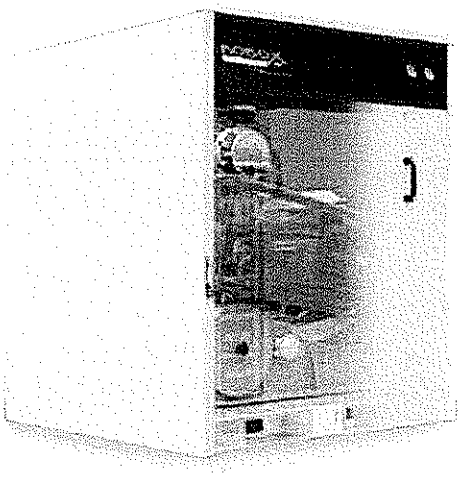
- Patented and unique air inlet design
- Low noise
- Cool operating temperatures (not overheating on a dead head)
- Low maintenance thanks to its robustness and heavy-duty operation



Screw Compressors

The low-pressure compressor unit, ROBOX screw, combines unique characteristics of the "oil-free" RSW screw compressor, with the consolidated characteristics of ROBOX compact units. It is available in two versions: **ROBOX SCREW Hi pressure** up to 2,500 mbar and **ROBOX SCREW Low pressure** up to 1,000 mbar.

- Efficient thanks to its unique RSW patented rotors, which reduce the number of revolutions and enhance the capacity-pressure ratio
- Low noise as a result of high-efficiency internal compression, silencers and advanced enclosure
- Simple installation
- Flexible to ensure the operation at the point of best efficiency
- Oil free for a more environmentally-friendly operation (Class 0 certification, according to ISO 8573-1)
- Ease of maintenance thanks to its simple and robust construction
- Customised with a wide range of options available



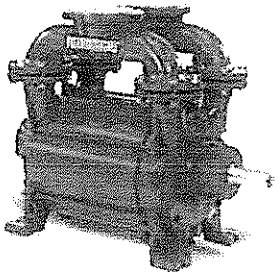
03/12/18

Product Range

Liquid Ring Vacuum Pumps and Compressors

The **RVS** series are liquid ring vacuum pumps, able to suck gas as well as vapours, achieving up to 33 mbar (a). Furthermore, the vacuum portfolio is wide-ranging with complete packages (LRVS, CRVS, KRVS) in total or partial water and oil recirculation versions. They can also be used as compressors for pressures up to 2 bar g. max.

- Reduced noise and vibrations
- Separation of service liquid from compressed gas
- No contact between cooling and service liquid (KRVS packages)
- Easy installation and maintenance



Centrifugal Pumps

The **PROMIX** family is capable of conveying any type of inert, aggressive, viscous liquid containing high percentages of suspended solid particles including sludge and the **PROCHEM** series is suitable for conveying clean or slightly murky liquids.

- Large inlet nozzle, allowing slurry suction and reducing the wear of the impeller
- Shaft protected from the conveyed liquid, preventing any corrosion event
- Stainless steel version and special models available

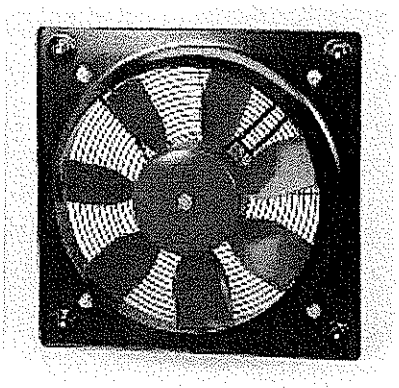
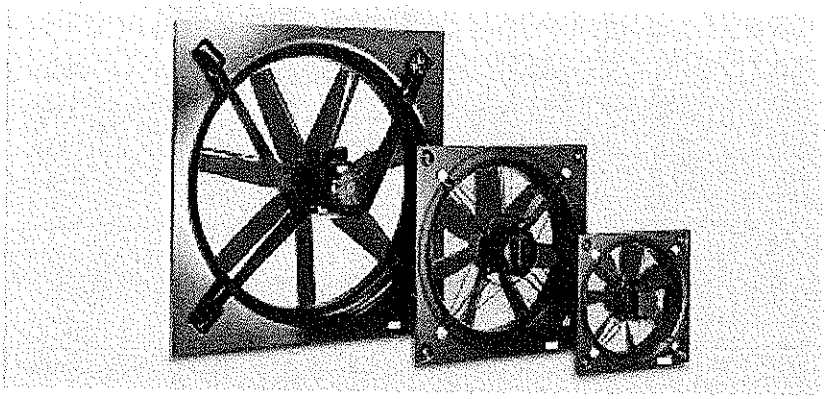
PLATE MOUNTED AXIAL FLOW FANS
COMPACT Series type HCFB-HCFT (Plastic impellers) and HCBB-HCBT (Aluminium impellers)





Description

The S&P Compact Plate Mounted Axial Fans feature, as the name suggests, an extremely compact design created by the combination of an internal rotor motor with factory matched direct drive wrap around impeller hub. This very low profile design optimises airflow performance whilst minimising noise generation. The Compact Plate Mounted Axial Fan series require an absolute minimum depth for any given wall, ceiling or panel mounted installation. Designed to be installed directly into walls, ceilings or panels, the Compact Plate Mounted Axial Fan series are suitable for use within a wide range of residential, commercial and industrial ventilation applications.

Applications

- General Ventilation:
  Shops , Offices, Cafes, Bars, Warehouse premises, Garages
- Agricultural Ventilation:
  For agricultural ventilation applications the Compact Plate Mounted Axial Fan series can be supplied with special high corrosion resistant constructional features. The specific application should be specified when ordering. Please see information concerning "Special Versions."
- Industrial Ventilation
  OEM equipment applications

The range

The Compact Plate Mounted Axial Fan series is available in eleven (11) standard nominal diameters from 250 to 1000mm, and depending upon the model, available with single or three phase motors in 2, 4, 6 & 8 poles.
Air volume performance ranges from 1,200 to 54,000 m^3/hr.

IP 65*

* IP55: Models 2-315, 2-355, 800 & 1000

Construction

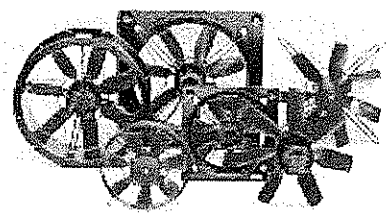
All COMPACT Plate Mounted Axial Fans include a one piece bell mouth inlet and mounting plate manufactured from high grade galvanised steel. The motor and fan impeller are firmly supported within this mounting plate by a strong electrowelded steel support frame. All models up to and including size 710, include a steel finger proof guard as standard mounted to the inlet side of the fan. This whole assembly is protected by a two stage cataforesis primer and tough black polyester paint finish. This particular coating has been evaluated as being suitable for Outdoor Equipment usage, by Underwriters Laboratories, Inc (USA).
All models are supplied with a pre-wired wiring junction box located on the back of the motor hub for easy wiring access. This wiring junction box protects all wiring connections against the ingress of dust and moisture. IP65 Rated*.
All standard Compact Plate Mounted Axial Fans are supplied in Form (A) configuration. Airflow over Motor - Impeller.

Motors
All Compact Plate Mounted Axial fans incorporate asynchronous induction motors with a squirrel cage rotor. All motors are manufactured in accordance with UNE-113 and CEI-34-1 standards. The motor casings are constructed from die cast aluminium with integrated cooling fins and finished with a tough (black) weatherproof polyester paint.
As standard, the Compact Plate Mounted Axial fans incorporate the following motor specifications:
- IP65 (IP55 for models 2-315, 2-355, 800 & 1000).
- Class F Insulation (-40 °C to +70 °C working temperatures).
- Suitable for usage in environments up to 95% RH.
- Speed Controllable (except 2 pole models, /4-630, 710, 800 & 1000 and explosion proof versions).
- Three Phase models can be supplied to special order for use with frequency inverters speed controllers. Please enquire.
- PG-11 cable glands on terminal boxes.
- Thermal protection

Motors can be supplied suitable for the following electrical supplies:
- Single Phase 230V 50 Hz.
- Three Phase 230/400V 50 Hz.
- Three Phase 400V 50Hz.

For other special voltages and frequencies, please enquire.
All single phase motors are supplied complete with a capacitor which is located inside the wiring terminal box.

Special versions



Special versions of the Compact Plate Axial Fan are available, i.e.:

- Agricultural construction.
- Deep guard for OEM applications.

Depending upon the application requirements please enquire.

Before installation, it is important to check that the product electrical characteristics listed on the data plate label (voltage, power, frequency etc), match those of the intended electrical supply.

Acoustic characteristics

The sound levels -NPS- illustrated in the tabulated performance data for the S&P COMPACT Plate Mounted Axial fans, correspond to the value of sound pressure dB(A), measured in free field conditions at a distance equivalent to three times the diameter of the impeller or a minimum of 1.5 meters whichever is the greater.
Sound power level spectrum in dB(A) at the corresponding octave band averages.

03/12/18

Performance curves - HCFB/HCFT - HCBB/HCBT

- Q = Air volume in, m^3/hr and m^3/s
- Pe = Static pressure in mmWG and Pa.
- Dry air at 20 °C and 760 mmHg.
- Air flow data in accordance with the following standards: UNE 100-212-89, BS 848, Part 1, AMCA 210-85 and ASHRAE 51-1985.

Typical fan selection:

Do not select an airflow performance in the area of the graph left of the dashed line (as shown to the right - coloured area).
To find the working point of the fan at a required volume, it is first necessary to plot a system resistance curve. The working point of the fan lies at the intersection of the system resistance curve and that of the fan performance curve - as illustrated to the right.

Example: Required air volume 10,000 m^3/h at 3 mmWG.
Fan working point 11,300 m^3/h at 4 mmWG.

Headloss Summary

System condition 1 : Distribution 1

Grid Design

Parameter	Unit	Tank 1:Pass 1:Zone 1	Tank 1:Pass 2:Zone 1			
Grid count		1	1			
No. of disc diffusers per grid		96	96			
Dropleg/Manifold		110mm PVC	110mm PVC			
Header count per grid		6	6			
Header spacing	mm	435	435			
Manifold length	m	2.17	2.17			
Header length	m	5.43	5.43			
Manifold location		End	End			
Dropleg location		End	End			

Grid Pressure

Air flow per grid (9)	Nm³/h	387.25	387.25			
Diffuser air flow (9)	Nm³/h	4.03	4.03			
Submergence	m	4.77	4.77			
Orifice diameter	mm	5 mm	5 mm			
Static header pressure differential in assembly	kPa	6.14E-2	6.14E-2			
Average header pressure in assembly	kPa	53.127	53.127			
A: Average Headloss from top of dropleg to headers	kPa	1.03E-1	1.03E-1			
B: Diffuser orifice headloss	kPa	2.21E+0	2.21E+0			
C: Diffuser dynamic wet pressure	kPa	4.18E+0	4.18E+0			
D: Static pressure	kPa	46.735	46.735			
Total pressure required at top of dropleg (A+B+C+D)	kPa	53.23	53.23			
Friction headloss (A+B)	kPa	2.31E+0	2.31E+0			

03/12/18

Notes

(1)	Design air is the maximum of process air or mixing air.
(2)	Delivered oxygen based on design air.
(3)	Performance based on diffuser density (At/Ad), submergence, and diffuser unit air flow.
(4)	The pressure at top of dropleg is defined above the water surface, including a 90° elbow.
(5)	The pressure at bottom of dropleg is defined under the water surface, where the PVC plastic dropleg pipe connects to the stainless steel dropleg pipe.
(6)	If the AOR/SOR parameter is not given, then its value will be evaluated later if suitable alpha, beta, D.O., theta, pressure, and temperature data is supplied.
(7)	Round tanks are evaluated as rectangular tanks diameter equal to length and equal surface area.
(8)	Annular tanks are evaluated as rectangular tanks of width equal to the annular width and equal surface area.
(9)	Nm^3/h, air flow defined at 0°C.
(10)	Specified volume is used to design basins with irregular geometries. Specified volume can also be given directly by the client. By default, Xylem calculates basin volume with standard formulas for regular solids given basin footprint dimensions and water depth.

03/12/18

AOR/SOR Calculation

The ratio of actual site oxygen transfer to standard condition oxygen transfer, (AOR/SOR), is dependent on a number of factors:

20°C:	Standard Condition Temperature	Beta:	Field/Std. Condition O2 Saturation Ratio
T°C:	Operating Water Temperature	Theta:	Operating Water Temperature Factor
P_{std}:	Std. Condition Ambient Pressure (1 Atmosphere)	DO:	Operating Oxygen Concentration
C_{surfT}:	Clearwater Surface O2 Saturation at operating Temperature	C^*_{sat20}:	Std. Condition Aerated O2 Saturation in the tank
P_{site}:	Site Ambient Pressure	9.09:	Clearwater Surface o2 Saturation av 20C
Alpha:	Field/std. Condition KIA Ratio		

$$\frac{AOR}{SOR} = \frac{\alpha\theta^{(T-20)}\left[\beta C^*_{sat20}\left(\frac{P_{site}}{Pstd}\right)\left(\frac{C_{surfT}}{9.09}\right) - DO\right]}{C^*_{sat20}}$$

03/12/18

Glossary of Terms

# Zones	Number of taper zones or zones of unique diffuser count in the pass.
Air Distribution Header	Pipes connecting to the manifold to which the diffusers are mounted. In the case of PVC systems, the diffuser holders are glued onto the crown or top of the air distribution header. For stainless steel systems, diffuser connectors are welded onto the invert or bottom of the pipe.
Air Header	See Air Distribution Header.
Annular Tank	Sometimes called a doughnut tank. This tank consists of a center circular tank, commonly a clarifier and an outer wall. The resulting annulus is segregated into compartments for process functions like digestion or aeration.
At/Ad	The ratio of tank area over the fine bubble diffuser area. The reciprocal of At/Ad is the percentage of floor coverage by fine bubble diffusers.
Center Wall Width	Thickness of the dividing wall for an oxidation ditch.
Channel Width	For ditch geometry, channel width refers to the dimension between the dividing wall and the outer wall of the ditch.
Delivered SOR	The Standard Condition Oxygen transfer rate delivered at the Design Air flow rate.
Delivered SOTE	The Standard Oxygen Transfer Efficiency at the Delivered SOR and Process air rate.
Design Air	The air flow used to determine system performance. It is the maximum of the Mixing Air and Process Air.
Dropleg	Vertical pipe connecting air main at top of tank to the floor mounted aeration equipment.
Floor Length	For Slope wall tanks, refers to the length measured at the floor of the basin. Aeration design uses this value in designing the piping layout.
Floor Width	For Slope wall tanks, refers to the width measured at the floor of the basin. Aeration design uses this value in designing the piping layout.
Geometry	Refers to general shape of the tank: Rectangular (Square), Circular, Slope Wall (Trapezoidal), Annular, or Oxidation Ditch
Grid	A single unit of aeration equipment consisting of a dropleg, diffusers, and manifold. Depending on the number of air distribution headers, the manifold may be omitted. Frequently, coarse bubble, stainless steel systems may not have a manifold. PVC systems almost always have a manifold.
Grid Length	For ditch geometry, the grid length dimension allows modifying the grid dimensions to accommodate mixers or other appurtenances in the ditch. If aeration design will design 1, 2, 3, or 4 ditches per basin. User must input number of parallel tanks as 1,2,3, or 4 and set grid length to an appropriate value. For example, a straight length of 100' and 4 grids means the grid length must be less than 50'.
Header	See Air Distribution Header.
Manifold	Horizontal pipe that is the terminating point of the dropleg. The manifold has connections to feed air to the air distribution headers.
Mixing Air	The air flow rate based on Mixing Criteria.

03/12/18

Mixing Criteria	Aeration systems serve two purposes: oxygenation and mixing of the suspended growth process. A certain amount of mixing energy is required to keep the solids mixed and suspended. In some processes, the air required for the oxygen transfer is not enough to keep the solids mixed. This situation is described as 'mixing limited'. In these cases, the air flow must be adjusted to the mixing criteria. By default, Sanitaire applies the WEF MOP/8 mixing criteria (Design of Municipal Wastewater Treatment Plants, Fourth Edition, WEF Manual of Practice 8, ASCE Manual and Report on Engineering Practice No. 76, pg. 11-83) of 0.12 scfm/ft² (2.19 m³/hr/m²). Spiral roll aeration systems generally require 15 - 25 scfm/kcf for mixing. Users may use any value for mixing criteria. Note Fine Bubble Mixing Criteria is air/area and Coarse Bubble Mixing Criteria is air/volume.
Oxidation Ditch	An oval shaped tank described as a rectangle with a half circle at either end. The rectangular area is bisected along its length by a dividing wall.
Oxygen Distribution	Number of taper zones or zones of unique diffuser count in the pass
Pass	A pass is a subdivision of a train. A single train (tank) with a serpentine flow path comprises a multiple pass system. A single tank with transverse baffle walls comprises a multiple pass system. Likewise, a single trains with several discrete basins is a multiple pass system.
Process Air	The air flow required for a given oxygen transfer rate.
SOR	Standard Oxygen Transfer Rate. Oxygen transfer rate defined at 20°C, 1 Atmosphere ambient pressure and clear water (alpha=1; beta=1).
Straight Length	For ditch geometry, straight length refers to the dimension from the end of one curve to the start of the second curve.
Surface Length	For Slope wall tanks, refers to the length measured at the elevation equal to the water depth of the basin.
Trains	A train is a treatment unit. Broadly, a train is a single treatment tank.
Trapezoidal Tank	A slope wall tank having rectangular footprint at both the floor and the water surface.

03/12/18

The selected mixer/mixers in this aeration system, must be manually positioned according to the Xylem Mixer Positioning Principles.

Let's Solve Water

Aeration products

FOR ENERGY-EFFICIENT BIOLOGICAL TREATMENT

03/12/18

Greater energy savings are in the air

Stricter environmental regulations and rising energy costs are forcing wastewater treatment plants to ensure wastewater discharge compliance and at the same time make operations more energy efficient. One of the main areas for environmental and cost savings lies just below the surface of your biological tanks.

Uncover submerged energy savings
Aeration systems today represent an estimated 30 to 70 percent of the total energy costs at a typical wastewater treatment plant. By making your plant's biological treatment processes more efficient, you can realize big energy savings and lower your operating costs.

Reliable cost-effective aeration solutions
Proven reliable for more than 40 years, comprehensive aeration solutions from Sanitaire and Flygt meet virtually every need and operating condition. From fine-bubble diffusers complete with framework, piping, supports and energy-saving blowers to coarse-bubble diffusers and stand-alone mechanical aerators, our aeration systems reduce both your capital expenditures and operating and maintenance costs. Plus they are backed by precise monitoring and control systems.

Optimizing your aeration processes
Although we offer the best aeration equipment, equipment isn't everything. Competence is. Our engineers put more than four decades of expertise and a true passion for high oxygen transfer to work to ensure environmentally sound operations at your plant. So everything you need to know about improving your aeration processes is available through a single and reliable partner.

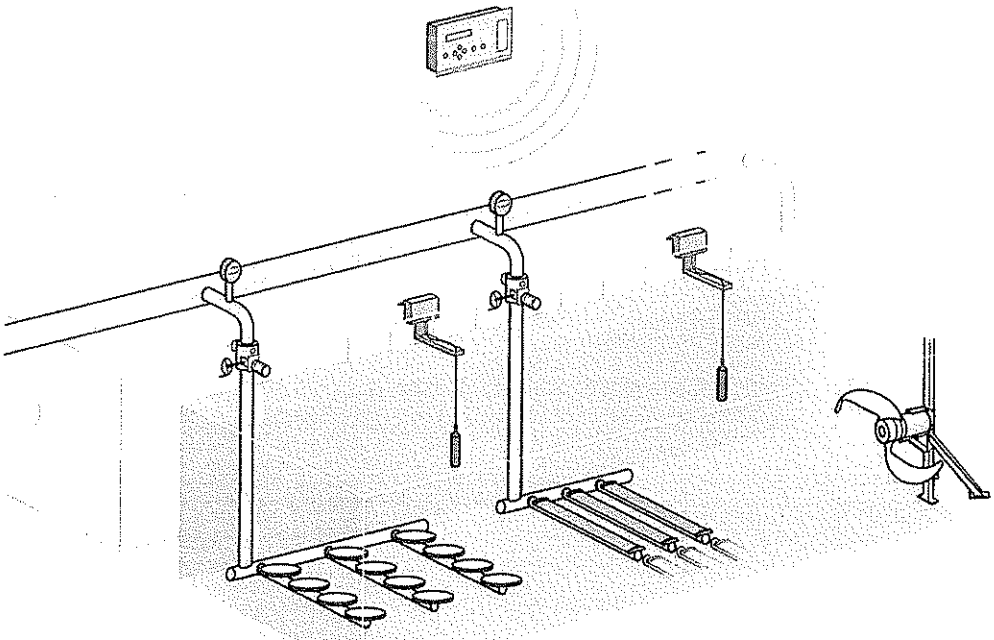
03/12/18



To optimize your process, we design, deliver, commission and, through control systems, support the operation and maintenance of your aeration system – from blowers to diffusers.

We understand how different operating strategies and equipment selection affect energy consumption and costs. So we can determine where additional operational efficiencies can be realized. Introducing an automated monitoring and control system or combining diffusers with mixers, for instance, can drastically boost efficiency and energy savings.

Whatever the challenge, be sure to take advantage of our vast aeration engineering expertise. This not only will improve aeration efficiency at your plant, but enable you to focus on increasing the profitability of your core business.

More oxygen delivered per kilowatt hour

Factors to consider when designing your aeration system:

Standard oxygen transfer efficiency (SOTE)

Used to compare oxygen transfer efficiency, SOTE is the ratio between the amount of oxygen transferred and the amount actually delivered. Per-formance can reach up to 60% depending on the water depth and airflow rate.

Standard aeration efficiency (SAE)

SAE is the ratio between the amount of oxygen transferred to the water and the amount of energy used. Typical values are 1-2 kg O_2/kWh for mechanical aeration systems and 2-8 kg O_2/kWh for diffused aeration systems.

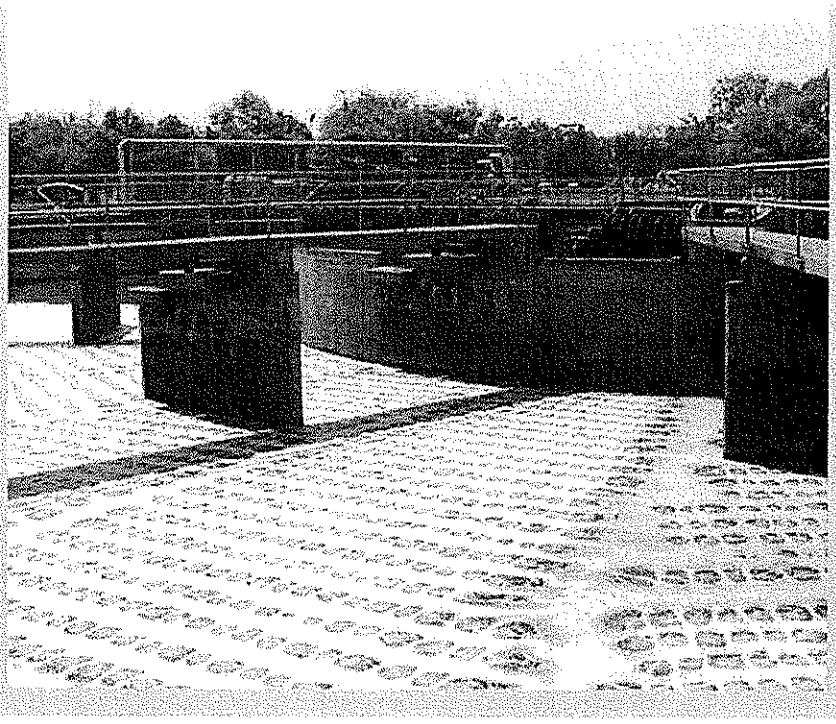
SAE reflects both SOTE as well as blower efficiency and the system pressure loss.

Which aerator is right for you?

Treatment stages	Applications	Diffused aeration	Mechanical aeration
Preliminary and primary	Grit chamber	Coarse bubble	
	Retention basin	Coarse bubble/Fine bubble	Jet aerator
Secondary	Biological aeration	Fine bubble	Jet aerator
Tertiary	Aeration before discharge	Fine bubble	
Sludge	Aerobic digestion		Jet aerator
	Sludge holding	Coarse bubble/Fine bubble	Jet aerator
	Odor control	Fine bubble	Jet aerator

03/12/18

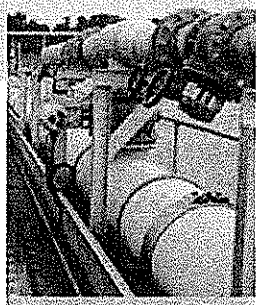
Dissolving into thin air



Grid components

To support Sanitaire fine bubble diffused aeration systems, we offer standardized grid components.

See page 9.



Air supply

No aeration system would be complete without an air supply and distribution system. Using in-house tools, we optimize designs for temperature and pressure considerations. We also complement Sanitaire aeration system with dependable blowers.

See page 11.

For reliable oxygen transfer in all types of wastewater aeration applications, choose Sanitaire® diffused aeration systems. No matter the tank geometry or process application, Sanitaire systems have proven effective in thousands of communities and industries worldwide.

Customize your system
Select the right components from the Sanitaire range and combine them with an air piping system, required support and an energy-efficient blower.

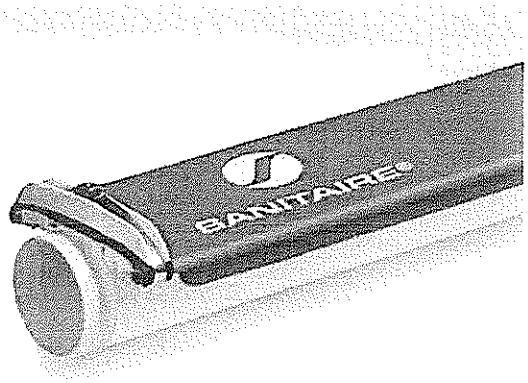
Fine-bubble diffusers
Sanitaire fine-bubble diffusers are generally employed for biological aeration, pre-discharge aeration and sludge holding odor control. Choose between Sanitaire Gold Series for high efficiency, Sanitaire Silver Series II membrane diffusers for standard and low-pressure aeration applications and the durable Sanitaire ceramic diffusers for applications that require corrosion resistance.

Coarse-bubble diffusers
For tougher applications such as sludge or industrial wastewater, Sanitaire coarse-bubble diffusers are the preferred technology. Typically used in grit chambers, retention tanks and sludge holding tanks, the Sanitaire wide-band diffuser doesn't disappoint.

03/12/18

Sanitaire Gold Series diffusers

Sanitaire Gold Series membrane diffusers are the latest innovation in fine-bubble aeration technology. Wherever high-density coverage and low flux rates are required, these can be tightly packed across any given basin floor area to provide unsurpassed aeration efficiency.



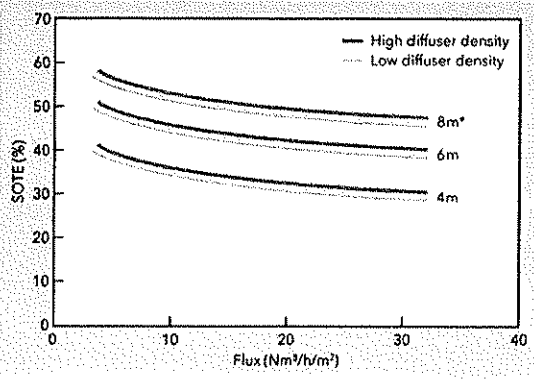
Energy efficiency
The unique diffuser geometry, and advanced micro-punched membrane enable high-density basin floor coverage and low air flux, which together provide high oxygen transfer using the lowest possible amount of energy. The membrane is engineered for low head loss thereby reducing energy consumption further.

High reliability
Thick, highly pliable polyurethane membranes outlast others in accelerated aging tests. Dependability is further enhanced by the watertight construction of the end fittings and sealing system, which withstand the stress of daily operation. It has even proven to be adapted to air-on/air-off applications.

Ease of installation
Compactness makes these complete, pre-assembled diffusers easy to install. This translates into faster commissioning, smarter use of resources and, ultimately, higher productivity.

Modularity
Modular design facilitates installation as well as low-cost, no-hassle retrofits because all Sanitaire components are interchangeable to enable optimization of aeration system performance.

Performance curves
Gold Series



*Submergence

Technical data

Membrane material	Polyurethane
Lengths	2,286 mm (90 in) 1,500 mm (59 in) 700 mm (28 in)
Airflux range	3.7-37 Nm³/h /m² 0.2-2 scfm /ft²
Standard oxygen transfer efficiency (SOTE)	7-10% per m submergence 2.2-3% per ft
Standard aeration efficiency (SAE)	3-8 kg O_2 /kWh 8-15 lbs O_2 /hph

03/12/18

Sanitaire Silver Series II diffusers

For a combination of high aeration efficiency and low operating costs, there's the Sanitaire Silver Series II membrane diffuser - the most widely used fine bubble diffused aeration system available today.

High oxygen transfer efficiency
The Sanitaire Silver Series II membrane features a unique slit pattern and slit shapes, which disperse air bubbles in an extremely fine, uniform pattern for optimal oxygen transfer.

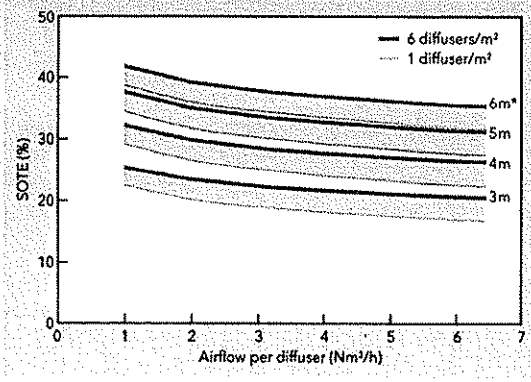
Long service life, low maintenance
The high elasticity and degradation-resistance of specially blended high-grade EPDM elastomer compounds contribute to a service life of 10 or more years.

Operating efficiency
The unique membrane shape, integrated O-ring and top-sealing threaded retainer ring eliminates leakage. This reduces energy consumption and raises operating efficiencies.

Great application flexibility
A highly effective, integrated check valve enables the aeration zones to easily be shut down for air-on/air-off applications.

Sanitaire Silver Series II LP
This 9" low-pressure version of the Sanitaire Silver Series II membrane features a modified slit pattern to handle airflow up to 17Nm³/h (11 scfm) with minimal pressure loss. It is an excellent choice for sludge and other heavy-duty applications.

Performance curves
Silver Series II



*Submergence

Technical data

Disc material	Specially blended high-grade EPDM
Diameter	178 or 229 mm (7 or 9 in)
Airflow range per disc	0.8-7 Nm³/h (0.5-4.5 scfm)
Standard oxygen transfer efficiency (SOTE)	Approx. 6.5% per m submergence (2% per ft)
Standard aeration efficiency (SAE)	2.5-6 kg O_2 /kWh (4-10 lb O_2 /hph)

03/12/18

Sanitaire ceramic diffusers

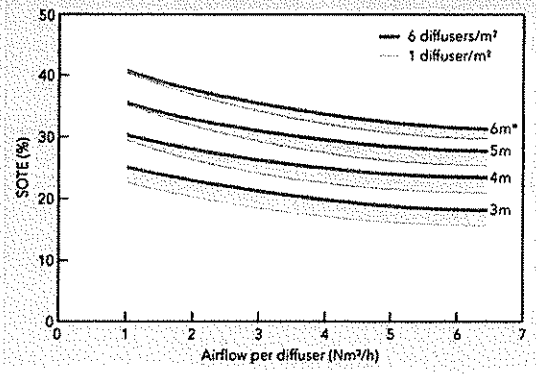
Sanitaire ceramic diffusers handle aeration of aggressive, highly corrosive wastewater, delivering high oxygen transfer both efficiently and cost effectively.

Low total cost of ownership
Sanitaire ceramic discs are specially compression-molded to achieve optimal contours for high oxygen transfer efficiency at low operating pressures. Variable areas of density across the disc surface promote uniform airflow distribution. This contributes to low system head loss, low energy consumption, low operating costs and, thereby, a low total cost of ownership.

Energy efficiency
Sanitaire ceramic discs feature a top-sealing threaded retainer ring, which ensures an airtight seal. As air pressure increases, the sealing force on the O-ring increases thus creating an airtight seal. Because there are no air leaks, no energy is wasted.

20-year-long life expectancy
Durable, reliable and clog-resistant, Sanitaire ceramic discs are low-maintenance diffuser elements that typically last 20 or more years. To prolong service life further, an optional in-place gas cleaning system enhances continuous performance.

Performance curves
9" ceramic



*Submergence

Technical data

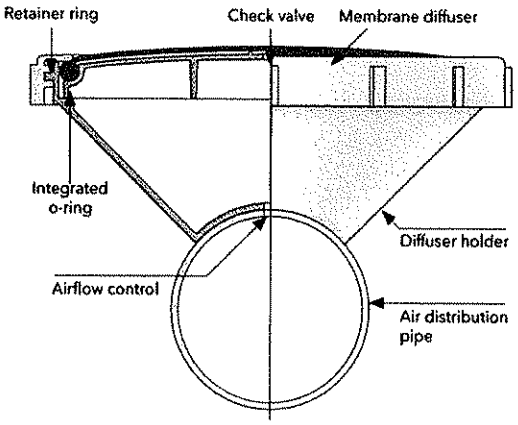
Disc material	Special compression-molded ceramic
Diameter	178 or 229 mm (7 or 9 in)
Airflow range per disc	0.5–4.7 Nm³/h (0.3–3 scfm)
Standard oxygen transfer efficiency (SOTE)	Approx. 6.5% per m submergence (2% per ft)
Standard aeration efficiency (SAE)	2.5–6 kg O_2 /kWh (4–10 lb O_2 /hph)

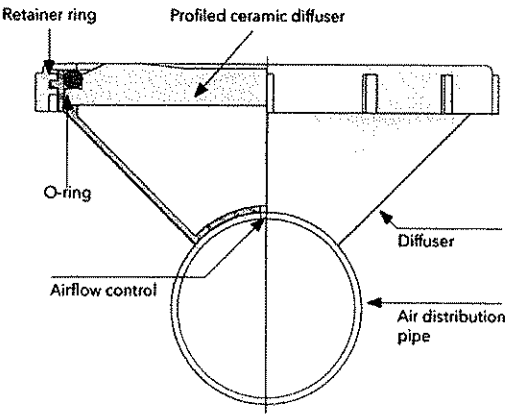
03/12/18

Sanitaire diffuser holders

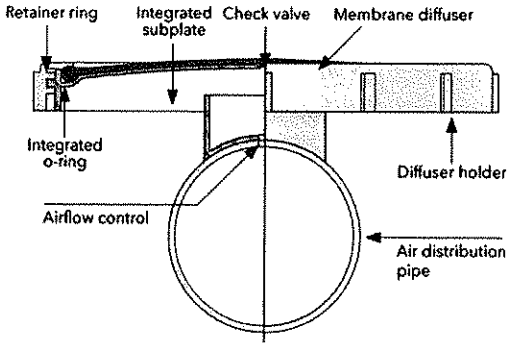
These easy-to-install Sanitaire diffuser holders provide superior mechanical strength to support Sanitaire Gold Series and Silver Series II membranes and Sanitaire ceramic discs.

Sanitaire 2300 holder
Designed for use with Sanitaire Silver Series II membranes, Sanitaire Silver Series II LP membranes and Sanitaire ceramic discs.

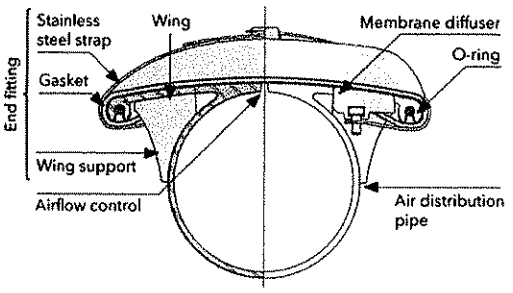




Sanitaire 2802 holder
A cost-effective alternative, the Sanitaire 2802 is designed for use with the Sanitaire Silver Series II and Silver Series II LP membranes.



Sanitaire Gold Series holder
Designed for use with Sanitaire polyurethane membranes and based on the highly efficient cross-section of the 7" holder.



03/12/18

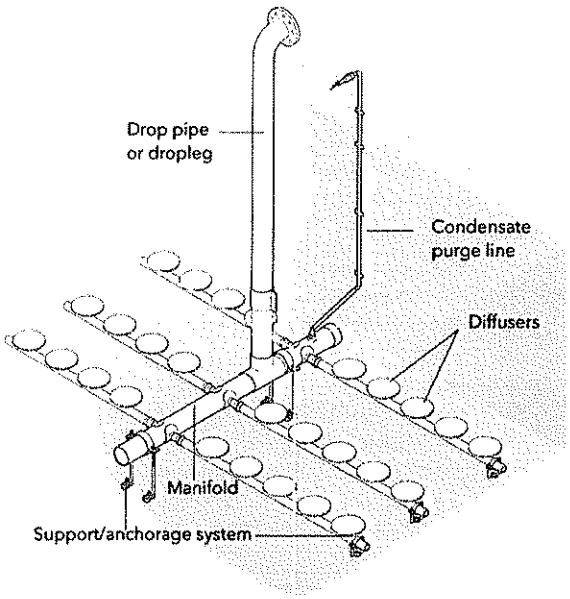
Sanitaire grid components

Beneath every Sanitaire diffused aeration system is a solid foundation. These components are integral to the Sanitaire fine bubble range and hold important supporting roles.

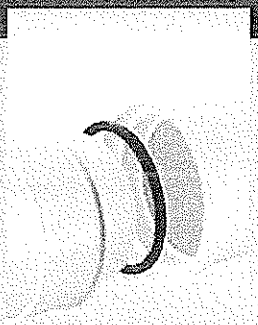
Solid framework
Patented Sanitaire spline joints ensure firm connection of air supply pipes from the dropleg to the diffusers. Engineered to withstand thermal expansion and contraction, water hammer and other dynamic stress, these spline joints securely fasten the pipes, thereby preventing air leakage, pipe blowapart and pipe rollover.

Upstanding system support
Made of durable corrosion-resistant stainless steel, Sanitaire guide supports securely anchor Sanitaire diffused aeration systems. These robust threaded supports feature an infinite height adjustment mechanism to ensure accurate grid leveling. The pipe bracing assembly accommodates pipe expansion while providing a stable foundation. Specially reinforced Sanitaire guide supports are available for high velocity and mixer zones.

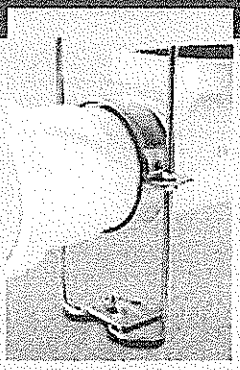
Easy to adapt
Sanitaire air distribution pipes are delivered with factory-welded diffuser holders and Sanitaire Gold Series are delivered as pre-assembled units, to facilitate installation. Moreover, Sanitaire grid components are fully interchangeable with your existing system. To meet more stringent emissions requirements, for example, it's easy to replace Sanitaire ceramic discs with Sanitaire Gold Series or Silver Series II membranes.



Aeration purging
After condensation, water levels in the manifold can rise and extend to the headers. To deal with water buildup, we offer a separate purge system that removes condensate from the lowest point in the system.



Spline joints



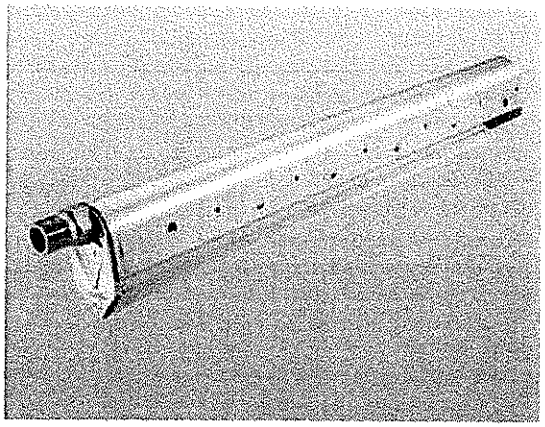
Adjustable grid support

Technical data	
Dropleg	Stainless steel AISI 304 or 316
Manifolds	Stainless steel, specially formulated polyvinyl chloride (PVC) to prevent UV degradation.
Distribution headers	PVC or CPVC for higher temperatures
Supports and anchor bolts	Stainless steel AISI 304 or 316
Gaskets	EPDM

03/12/18

Sanitaire coarse bubble wide-band diffuser

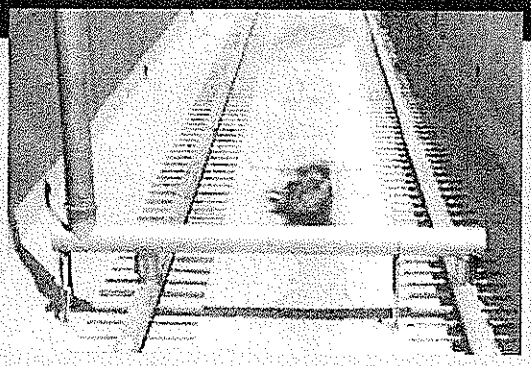
The Sanitaire stainless steel wide-band diffuser is an excellent choice and a smart alternative to mechanical aeration. It is especially suited to tough sludge-related applications such as aerobic sludge digestion, grit chambers, flow equalization and channel aeration.



Clog-resistant, maintenance-free design
The Sanitaire wide-band diffuser features an innovative inverted air reservoir. This stores a sufficient air volume at the centre of the diffuser for use to ensure continuous and uniform airflow. This prevents clogging. Another smart feature is a bottom deflector, which prevents the entry of debris into the diffuser and reduces the need for maintenance.

Erosion/corrosion resistance
Thanks to immersion passivation after fabrication, the Sanitaire wide-band diffuser is erosion/corrosion-resistant and maintains full structural integrity even in welded heat-affected zones. This prolongs service life.

Solid oxygen transfer efficiency
Dual horizontal levels of diffusion ports on the diffuser side ensure uniform air distribution and aeration efficiency.



Technical data	
Material	Stainless steel AISI 304 or 316
Length	305 or 610 mm (12 or 24 in)
Airflow range per band	15–63 Nm³/h (10–40 scfm)
Standard oxygen transfer efficiency (SOTE)	1.6–2.5% per m submergence (0.5–0.8% per ft)
Standard aeration efficiency (SAE)	0.7–2 kg O_2 /kWh (1.1–3.5 lbs O_2 /hph)

03/12/18

Blowers

Optimizing your aeration systems is of paramount importance. Which is why we can complement every Sanitaire diffused aeration system with a fully packaged blower system that is reliable, energy-efficient and easy to maintain.

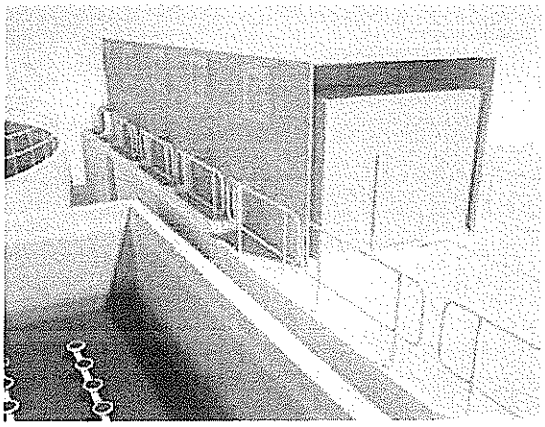
It takes experience and expertise to select the right blower for your aeration system. We have both. We understand the parameters that influence blower selection - from energy efficiency and reliability to life cycle cost, operational flexibility and installation footprint through to noise levels and maintenance requirements.

Whatever your aeration needs, we help you select the right blower from among these technologies, which are typically found in a wastewater treatment plant.

Rotary lobe blowers
A pair of spinning rotors delivers a fixed volume of air for each rotation. Rotary lobe blowers rely upon external compression whereby the air is compressed by the system backpressure. While these offer the advantage of low capital investment costs upfront, they also provide low efficiency.

Screw rotor blowers
A pair of intermeshing screws progressively reduces the volume of air as it moves along the length of the screw element. These provide higher efficiency than other positive displacement blowers due to the use of internal compression.

Multi-stage centrifugal blowers
Multiple impellers are mounted on a single low-speed shaft normally operating at a fixed speed. These are employed for larger flows and require less capital investment than other types of centrifugal blowers, however are also generally less efficient.

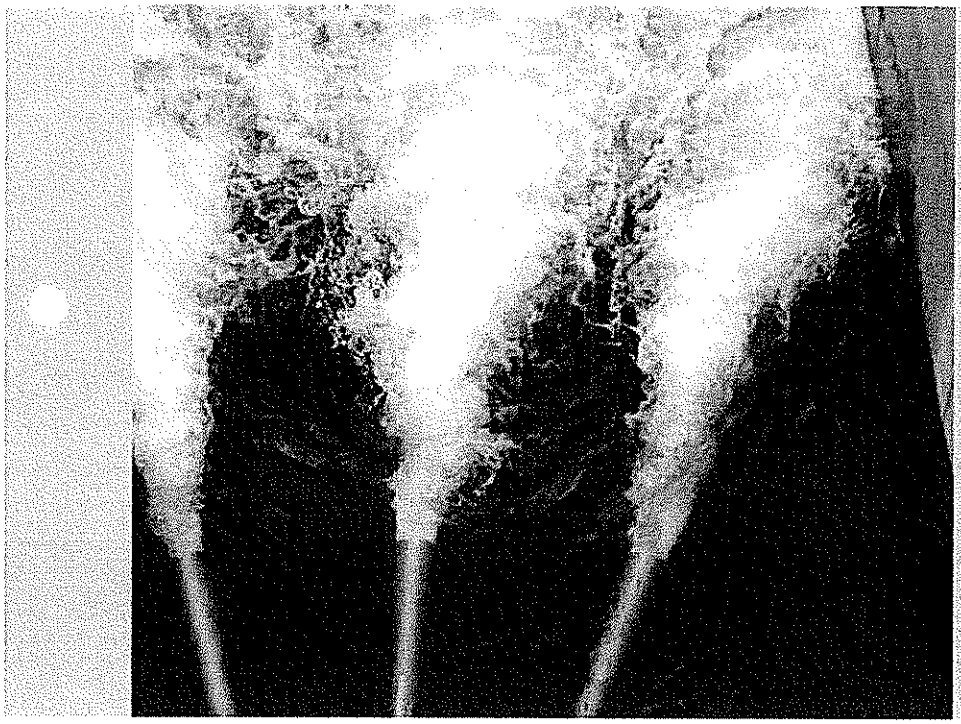


Single-stage, integrally geared centrifugal blowers
A single impeller achieves higher rotational speed via a step-up gear. These can be equipped with variable inlet guide vanes and diffuser vanes to achieve high efficiency over a range of operating flows. Single-stage, integrally geared blowers are more efficient than positive displacement and multi-stage centrifugal blowers.

Variable-speed, single-stage direct-drive centrifugal blowers
A single or dual impeller is mounted directly on to the shaft of a high-speed motor with low-friction magnetic or air foil bearings. These have integrated VFD (variable frequency drive) to match pressure and flow rate demands. While more expensive than positive displacement and multistage centrifugal blowers, these are more efficient, with magnetic bearing blowers often being more efficient than those with air foil bearings.

03/12/18

Flygt jet aerators

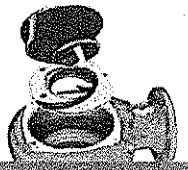


Mechanical aeration systems from Flygt provide an affordable alternative to our highly efficient diffused aeration systems. Convenient lift-in, lift-out solutions, submersible Flygt jet aerators provide reliable, low-cost oxygen transfer for small to medium-sized sludge tanks, retention tanks and bio-reactors.

Quick, low-cost installation
Convenience doesn't come easier than with Flygt jet aerators. Simply lift and position these stand-alone aeration systems into any small to medium-sized tank without having to empty it, using the Flygt pump lift and chains. Installation is complete. Then plug in Flygt jet aerators and let them work. No blowers, special housing or superstructures are required.

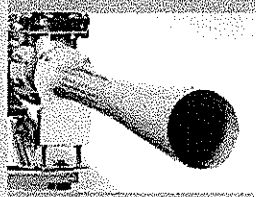
Proven long-term reliability
Flygt jet aerators provide maximum uptime and minimal maintenance. Proven N-technology, a specially engineered Flygt ejector assembly and air suction pipe bend combine to provide high operational reliability.

Better working environment
Because the submersible Flygt jet aerator rests on the tank bottom, there's significantly less spray and lower noise levels and vibrations. This greatly improves the working environment.



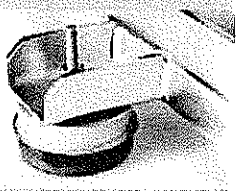
Proven N-technology

Flygt jet aerators feature Flygt N-pumps with N-technology, renowned for its non-clogging design and high efficiency.



Ejector assembly

The robust, non-clogging ejector assembly creates high turbulence where wastewater combines with air to form a liquid jet containing fine air bubbles.



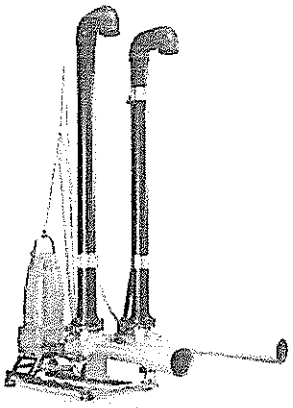
Pump feet

Robust stand with damper feet prevents vibration, which could damage the ejector system.

03/12/18

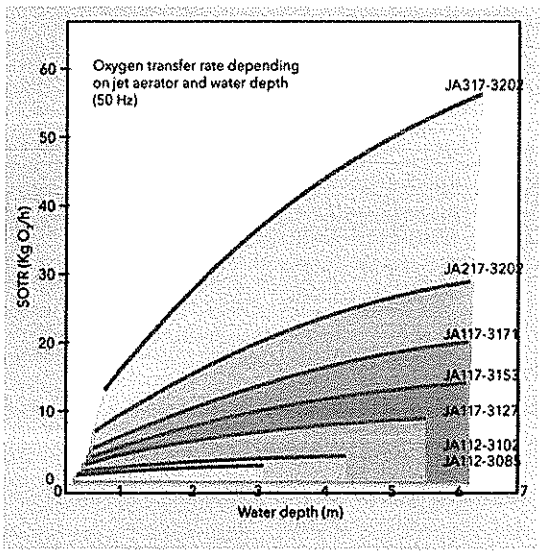
Operational flexibility
Compact Flygt jet aerators fit into any tank regardless of size or shape. Choose the Flygt pump capacity, number of mechanical ejectors and materials that match your requirements. Pumps can serve between one and three ejectors.

Erosion/corrosion-resistant operation
Greater durability can be achieved by choosing the stainless steel ejector assembly and Hard-Iron™ N-impeller over the standard galvanized steel ejector assembly and cast iron N-impeller.



The Flygt jet aerator consists of air suction pipes, an N-pump, ejector housings and ejectors.

Performance curves



Working principle; The velocity of the water creates air suction which is mixed in the ejector and transferred into the wastewater tank.

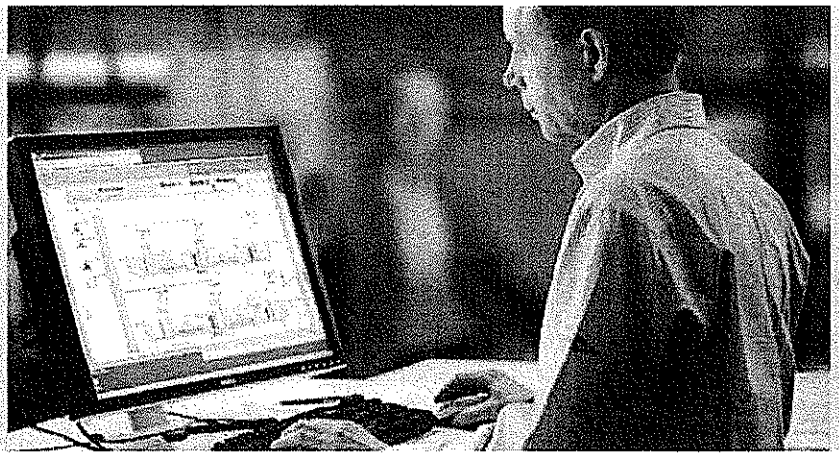
Empowering system performance

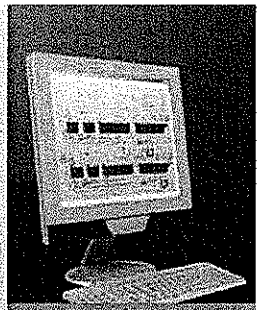


Take command of the performance of your aeration systems with our monitoring and control systems. To help you meet your responsibilities in a constantly changing environment, you can rely on us to put you in total control of your entire plant or plant subsystem/s.

Saving energy on a daily basis
The Flygt APX process controller automatically adapts the air supply to your oxygen requirements based on daily and seasonal variations. This drastically reduces power consumption and boosts energy savings by up to 40%. The information in our systems flows seamlessly to most existing third-party control system. So after installation, you can immediately begin saving more energy.

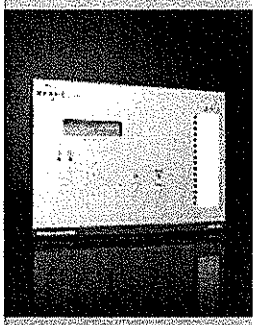
Total control, total performance
For full end-to-end control of your entire plant, combine the Flygt APX process controller with the Flygt AquaView SCADA system. Both are based on open standards, no special interfaces are required to communicate with most programmable logic controllers (PLCs) or SCADA systems. This makes continuous real-time monitoring of individual components possible. It also provides detailed data on events to identify trends and diagnose problems before they even occur. With total control, you can boost energy efficiency every step of the way and raise performance at your plant.

Total peace of mind
We understand that system reliability is of paramount importance. With us as your single reliable partner, you not only can improve control over your operations, but improve productivity and profitability. Managing your plant from any remote location is easy, thanks to web-based tools and online support. What's more, our control systems are flexible, scalable and future-proof and can accommodate additional equipment in virtually any treatment plant configuration.



Flygt AquaView SCADA system

- Provides a complete plant overview
- Collects and stores data to identify trends and diagnose problems before they occur
- Provides extensive alarm handling

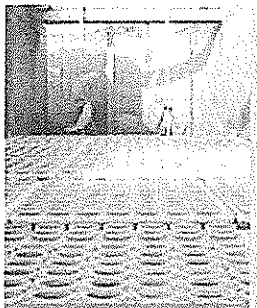


Flygt APX 700 process controller

- Distributes the required oxygen to tanks and grids
- Operates blowers at optimal efficiency
- Provides extensive alarm handling

03/12/18

Aeration expertise runs deep

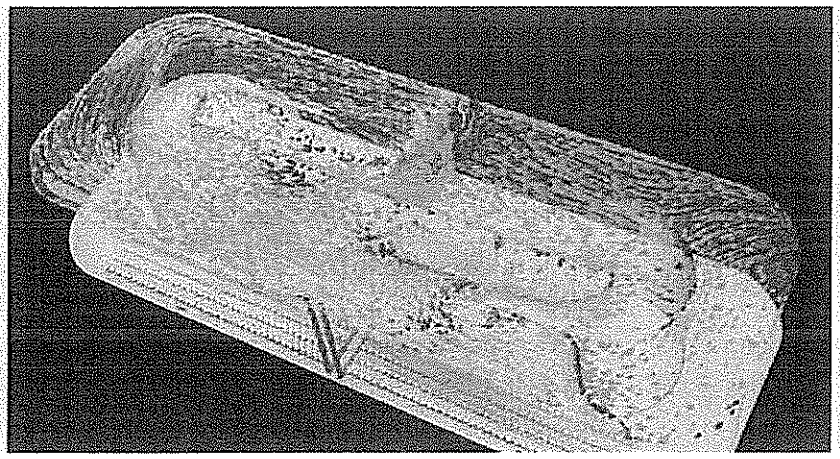


Combining aeration & mixing technologies

To deliver high oxygen transfer and mixing efficiencies with minimal energy consumption, you can rely on our engineers to share their knowledge about system design.

Comprehensive system design services

- System simulation utilizing CFD
- Engineering software development
- Advisory services
- System design assistance
- System specification assistance
- Oxygen transfer testing
- Model testing



We are passionate about the design and execution of comprehensive aeration treatment solutions. We have knowledge and understanding of the aeration process to safeguard the wellbeing of your business and the environment.

Extensive systems engineering
Our competence in systems engineering runs deep. We can assist you every step of the way - from developing mixing and aeration specifications to shop testing. Through thorough aeration design analysis, we are able to achieve the highest possible oxygen transfer while using the least possible amount of energy.

Smart tools to analyze aeration design
Our engineers combine their experience and expertise with specially developed software programs and tools so that we can design new and existing aeration installations tailored to your requirements.

Computational fluid dynamics (CFD) programs enable our engineers to simulate your aeration operating conditions, determine how best to optimize flow turbulence in your tanks and minimize energy consumption.

We use system temperature and pressure calculations to determine the optimal conditional for every single component in your entire aeration system - from blower to grid.

Grid configuration is another area where we excel. We tailor your grid to meet your requirements for oxygen transfer.

Support all along the way
Customers worldwide have come to rely on us for comprehensive range of aeration system components and accessories, spare parts and support. Whatever your requirements, we support you all the way - from designing and commissioning to optimizing and maintaining your aeration systems.

03/12/18

Xylem |'zīləm|

1) The tissue in plants that brings water upward from the roots;
2) a leading global water technology company

We're 12,000 people unified in a common purpose: creating innovative solutions to meet our world's water needs. Developing new technologies that will improve the way water is used, conserved, and re-used in the future is central to our work. We move, treat, analyze, and return water to the environment, and we help people use water efficiently, in their homes, buildings, factories and farms. In more than 150 countries, we have strong, long-standing relationships with customers who know us for our powerful combination of leading product brands and applications expertise, backed by a legacy of innovation.

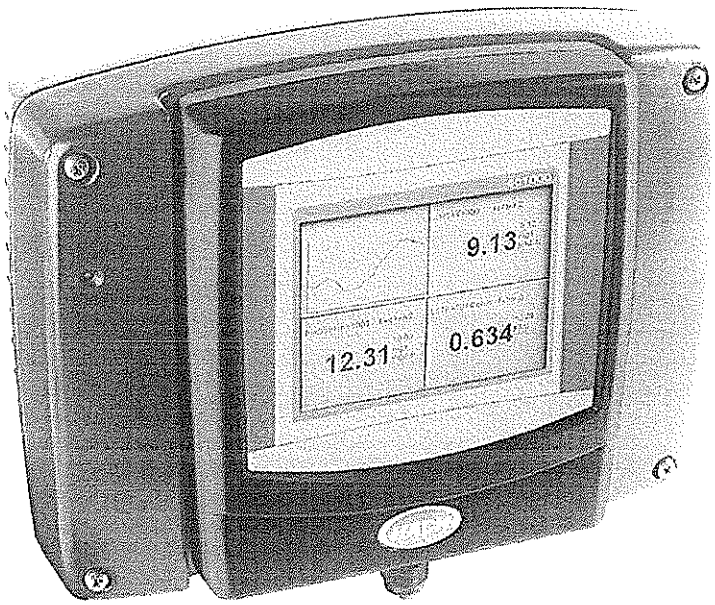
sc1000 MULTI-PARAMETER UNIVERSAL CONTROLLER

Applications

- Drinking Water
- Wastewater
- Power
- Industrial Water



PROGNOSYS™ READY

A fully modular system consisting of a display module and one or more probe modules.

More Confidence in Your Instrument's Performance

Available exclusively on the sc1000, PROGNOSYS predictive diagnostics uses patented multivariable diagnostic software to read multiple inputs from your instrument and alert you to the instrument's overall performance. An easy-to-read dashboard provides instant indication of measurement reliability and service requirements.

Plug and Play Operation

There's no complicated wiring or set up procedures with the sc1000 controller. Plug any Hach digital sensor into a Probe Module and it's ready for use. No special ordering or software configuration is needed.

Communication Options to Fit Any Application Need

The sc1000 controller features state-of-the-art Modbus TCP/IP communications protocol for seamless integration into a network of devices that support TCP/IP sockets. Use a standard Ethernet cable or connect wirelessly using GSM/GPRS to communicate with your SCADA, PLC, or other network. The sc1000 also offers up to 12 analog outputs for measured values and up to 12 analog or digital values from non-digital sensors.

Expandable and Upgradable

The sc1000 Controller can adapt to your needs. Add or change probes without having to change the controller. Plus, with a single Display Module, additional Probe Modules and associated sensors can be added or removed depending on operational needs. Fully upgradable software ensures that this system will not be obsolete. Hach service plans are available.

Expandable and Upgradable

The Hach sc1000 Controller can adapt to your needs. Change probes without changing the controller. With a single Display Module, additional Probe Modules can be added or removed depending on operational needs. Fully upgradable software ensures that this system will not be obsolete. Hach service plans are available.

Specifications*

Operating Temperature Range	-20 to 55 °C (-4 to 131 °F), 0 to 95% relative humidity, non-condensing
Storage Conditions	-20 to 70 °C (-4 to 158 °F), 0 to 95% relative humidity, non-condensing
Power Requirements (Voltage)	100 - 240 V AC, 24 V DC
Power Requirements (Hz)	50/60 Hz
Display	1/4 inch VGA graphical backlit TFT color Glas/Glas-Touch screen, high resistance, 320 x 240 pixels
Display Viewing Area	11.4 x 8.6 cm (4.5 x 3.4 in)
Alarm	Low alarm point, low alarm point deadband, high alarm point, high alarm point deadband, off delay, and on delay
Relays	Up to four SPDT, user-configurable contacts rated 100 to 230 VAC, 5 Amp resistive maximum per probe module. Additional relays are available with additional probe modules.
Inputs	Up to 12 analog 0-20 mA, maximum impedance 500 Ohms per probe module. Additional analog inputs are available with additional probe modules.
Outputs	Up to 12 analog 0/4-20 mA, maximum impedance 500 Ohms per probe module. Additional analog outputs with additional probe modules. Optional digital communcations via Modbus® (RS485) and Profibus® DP/V1.
Analogue Output Functional Mode	PID, high/low phasing, setpoint, deadband, overfeed timer, off delay, on delay
Communication	Modbus® (RS485): Advanced communications/networking with PLC or SCADA system directly from analyzer Profibus® DP/V1 (certified) GSM/GPRS Quad-band cellular module (FCC and IC approved, EU and US only) Ethernet service port, RJ45, 10 MB/s
Mounting Configurations	Surface, panel, and pipe (horizontal and vertical) with optional sun shield
Enclosure Rating	IP65
Material Enclosures	ABS (display module) and metal (probe module) enclosure with corrosion resistant finish
Dimensions Metric (H x W X D)	150 mm x 315 mm x 250 mm
Certifications	North American Certifications: cTUVus to UL 61010A-1 and CSA C22.2 No. 1010.1 FCC ID QIPMC56 / IC ID 267W-MC56 European Certifications: CE per 73/23/EEC and 89/336/EEC TUV-GS to EN 61010-1 EN 61326 Amd's 1 & 2
Weight	Approximately 14.33 lbs. (6.5 kg) depending on configuration
Warranty	1 year

Subject to change without notice.

03/12/18

Dimensions

The sc1000 controller unit can be installed on a pole, wall, or a floor stand.
No tools are needed to connect the controller unit to any Hach digital sensor.

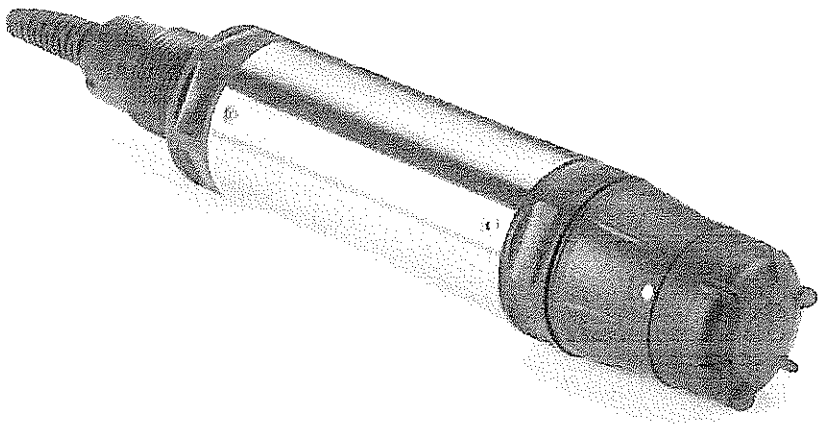
DISSOLVED OXYGEN: HACH LDO® PROBE, MODEL 2

Applications

- Wastewater
- Industrial Water
- Drinking Water



Take "No" for an answer when measuring dissolved oxygen with the next generation Hach LDO probe.

No Calibration Required

The Hach LDO probe is ready to work in your process right out of the box with no calibration required for the entire 2 year life of the sensor cap.

No Membranes to Replace

There is virtually no maintenance with Hach's breakthrough luminescent technology. There are no membranes to replace, no electrolyte solution to replenish, and no anode or cathode to clean.

No Missed Cleaning Cycles

Customizable service indicators trigger a service message so that a cleaning cycle is never missed.

No Drift

A cutting-edge, 3D calibration procedure at the factory makes oxygen measurement with the Hach LDO probe more accurate than ever before.

No Complications

A robust new design gives the Hach LDO enhanced durability and reduced size for easier handling.

Specifications*

Range	0 to 20.00 ppm
	0 to 20.0 mg/L (or ppm)
	0 to 200 % air saturation
Accuracy	± 0.05 ppm below 1 ppm
	± 0.1 ppm below 5 ppm
	± 0.2 ppm above 5 ppm
Response Time	T_{95} < 60 s
	T_{90} < 40 s
Resolution	0.01 ppm DO 0.1% saturation
Repeatability	± 0.1 (mg/L) ppm
Flow Rate	None required
Sensor Immersion Depth	Down to 345 kPa 345 kPa (50 psi), maximum; accuracy may not be maintained at this depth
Transmission Distance	1000 m (3280 ft.) maximum when used with a termination box
Cable Length	10 m (options with 30m, 60m, 100m)
Dimensions (D x L)	1.9 in x 10 in (48.25 mm x 254 mm)
Weight	2.2 lbs. (1 kg), probe only

**Subject to change without notice.*

Principle of Operation

The HACH LDO sensor is coated with a luminescent material. Blue light from an LED is transmitted to the sensor surface. The blue light excites the luminescent material. As the material relaxes it emits red light. The time it takes for the red light to be emitted is measured. Between the flashes of blue light, a red LED is flashed on the sensor and used as an internal reference.

Increased oxygen in the sample decreases the time it takes for the red light to be emitted. The time measurements correlate to the oxygen concentration.

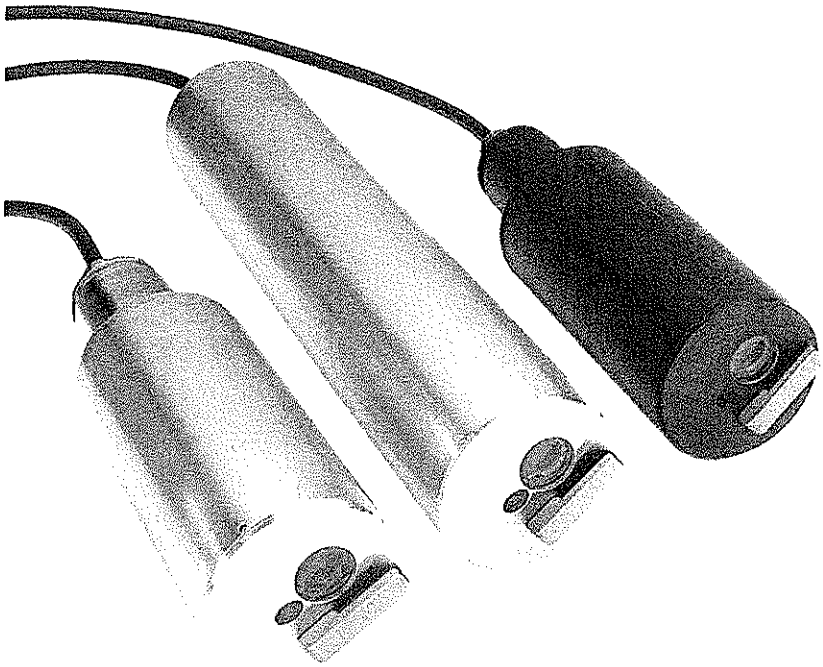
SOLITAX sc TURBIDITY & SUSPENDED SOLIDS SENSORS

Applications

- Drinking water
- Wastewater
- Beverage
- Industrial water
- Power



PROGNOSYS® READY

Accurate, colour-independent suspended solids and turbidity measurements

Greater accuracy, less maintenance

Hach®'s Solitax sc sensors provide accurate, colour-independent measurement of turbidity and suspended solids in drinking water, wastewater and industrial process applications. A self-cleaning device prevents biological growth and interference of gas bubbles. This system's reliable performance and full data communication capability help improve process control and reduce treatment costs associated with polymer use, digester volume, and sludge handling.

Excellent correlation to laboratory analysis

Solitax sc sensors show an exceptional correlation to laboratory analysis. On-line measurement not only saves time on manual analysis, but also provides critical real-time measurements that can be used to operate the plant more efficiently.

Fully serviceable sensors

Conventional turbidity and suspended solids sensors are potted and are discarded when they no longer function. Solitax sc sensors are fully serviceable, which often doubles the useful life of the sensor.

Easy one-point calibration

Factory calibrated in conformity with DIN EN ISO 7027 for long-term calibration stability. Calibration is easy with a simple correction factor procedure.

Multi-channel, multi-parameter system

Multiple Solitax sc sensors can be installed on one Hach SC Controller. The same controller can also accommodate any combination of parameters. All of Hach's model sc sensors are "plug and play" with no complicated wiring or set-up procedure necessary.

03/12/18

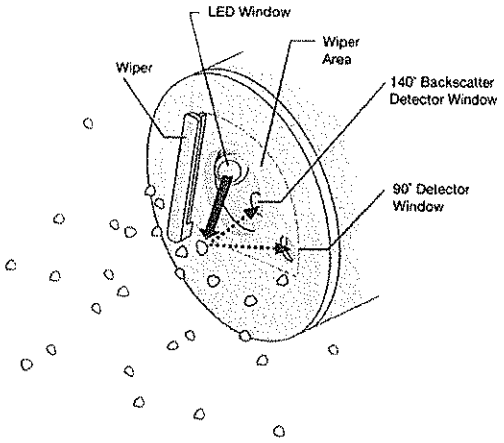
Principle of Operation

Solitax sc ts-line sensor with dual-beam optics and added backscatter detector

- Dual infrared light beams. LED light source transmits light at 45° to sensor face.
- Nephelometric photoreceptors detect light at 90° to the transmitted light beam.
- Backscatter photoreceptor (included on all models except the Solitax sc t-line) detects light at 140° to the transmitted light beam to measure suspended solids in heavily loaded sample streams.
- Self-cleaning wiper, optional.
- T-line probes measure turbidity only. TS, HS, inline, and highline sensors measure either turbidity or suspended solids.



Dimensions

Hach Solitax sc sensors can be fixed to the rim of the tank for immersion applications or inserted directly through the sidewall of a pipeline for insertion applications. A variety of installation kits are available.

Be certain in your measurements with a first class Service Partner. Be confident with Hach Service.

By having regular on-site preventative maintenance and calibration, you maximise your measurement reliability and instrument uptime. Hach Service Programs give you full assurance that your instruments stay in compliance, and you stay within your budget.

Start-Up:
Commissioning will ensure you get the best performance from your instrumentation from the first day you use it.

Service Agreements:
Hach offers a wide range of service agreements that can be tailored to you to help maximise your measurement reliability and instrument uptime.

Contact us to get a service offering designed for you.

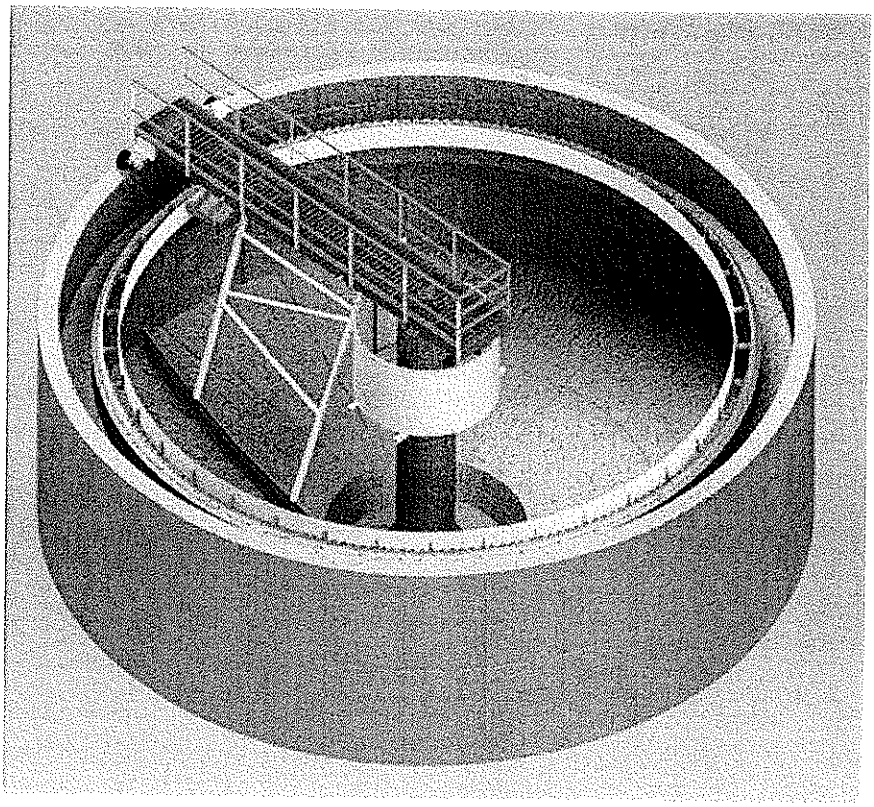
Circular Sedimentation tank

EQUIPMENT



The equipment is classified as follows:
-Protection provided against electric shock: Class II
-Protection provided against the intrusion of solid objects, dust, and water: IP44

The scraper bridge is manufactured according to the following instructions and standards:
- EN 292-1: Safety of machinery - Basic concepts, general principles for design. Basic terminology, methodology
- EN 292-2: Safety of machinery - Basic concepts, general principles for design. Technical principles and specifications
- EN 60204-1: Safety of machinery - Electrical equipment of machines. General requirements

SPECIFICATIONS of SCRAPPER BRIDGE

Type	: ROTATING / DK05
Bridge Length	: 8,50 m
Walkway Width	: 0,80 m

Gear Motor

Manufacturer	: BONFIGLIOLI RIDUTTORI
Type of reducer	: MVF44_86FC_700
Type of electric motor	: P71 BN71B B4
Motor Power	: 0.37 KW, 400 V, 50 Hz, class F
Torque	: 474 Nm
Speed	: 2 rpm^{-1}

Power Transmission

Directly to the gearbox

TECHNICAL DESCRIPTION

The rotating half bridge scraper is designed to remove settled sludge and scum from circular settlement tanks. The equipment in a tank comprises a galvanized fabricated bridge structure of channel or universal beam sections complete with a galvanized chequer plate walkway and suitable handrails. The scraper bridge is constituted also from the central pivot, a rotation unit, the bottom scraper, the surface scraper with scum box and the central deflecting hood while additional equipment is offered which consists of scum board and weir. All the emerged parts of the structure are made of hot-dip galvanized carbon steel S235JR and the immersed parts of stainless steel type AISI 304L.

Bridge structure

The bridge frame is a frame structure made from standard open section beams. The designation of the Chanel profiles depends on the dimensions of the bridge. Its walkway flooring consists of galvanized chequer plate while double-row tubular handrailing of 1m height is supplied.

Central pivot

The scraper bridge is supplied with a central heavy duty bearing unit that is adapted to the tank's center part. This unit is suitable to bear all the loads (axial, radial and torque) safely and will not be affected from the level differences of the peripheral wall. Slip ring collector for supplying electricity to the motor is included.

3/12/18

Prospect

The central support of the tank can be made of either of reinforced concrete or of stainless steel beam (in case of small diameter tanks).

Drive unit

The drive unit is located at the outer end of the bridge and consists of a motor reducer and two wheels, one driving wheel and one driven wheel. The motor reducer is placed on the driving wheel in order to achieve the bridge motion. The gear motor is suitable for continuous operation in outdoor installation (weatherproof). The wheels are manufactured from cast iron and wear-resistant rubber, supported by ball bearings.

Bottom scraper

A series of bottom scraper blades are attached on the bridge by vertical tubular supports and remove the settled sludge from the tank floor. The scrapers are arranged to form a continuous volute (spiral) pattern to ensure that sludge is directed towards a central hopper in the tank floor. The angle of the spiral is so calculated, to ensure optimal scanning of the sludge without dead spots in the center of the tank.

Surface scraper with scum box

Surface scraper is also located under the bridge at the water level of the tank and moves the floating scum towards the periphery where is located the scum box.

Energy dissipating well

The energy dissipating well made of stainless steel intends to calm the water, distributing it evenly throughout the enclosure.

Scum board and weir

The scum board is made of stainless steel and prevents the escape of floating scum in the weir. The perimeter weir is a triangular V-notch weir and is also made of stainless steel sheet.

CERTIFICATE

This is to certify that

WILO SE

Nortkirchenstraße 100
44263 Dortmund
Germany

with the organizational units/sites as listed in the annex

has implemented and maintains a **Quality Management System**.

Scope:
Development, manufacture, sales and service of pumps and pump systems for Building Services, Water Management and Industry.

Through an audit, documented in a report, it was verified that the management system fulfills the requirements of the following standard:

ISO 9001 : 2008

Certificate registration no.	060313 QM08
Date of revision	2016-04-24
Valid from	2015-04-30
Valid until	2018-04-29
Date of certification	2015-04-30

DAkkS
Deutsche
Akkreditierungsstelle
D-ZM-16074-01-00

DQS GmbH

Υποβρύχια αντλία λυμάτων — Rexa PRO V05 DA-222 / EAD1X2-T0025-540-O

Τεχνική περιγραφή
Υποβρύχια αντλία λυμάτων, ως υποβρύχιο συγκρότημα με κινητήρα, για σταθερή, κατακόρυφη τοποθέτηση, για άντληση ανεπεξέργαστων, χημικά και μηχανικά μη διαβρωτικών για την αντλία, λυμάτων. Ακτινικά διατεταγμένο στόμιο κατάθλιψης και αξονική αναρρόφηση. Το συγκρότημα είναι κατασκευασμένο με τρόπο εύκολο για τη συντήρηση. Οι παροχές πρέπει να εξασφαλίζονται κατά ISO 9906 Παρ. Α.

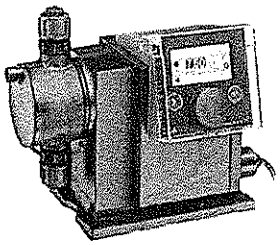
Position	Qty.	Description
	1	**DDA 30-4**



Note! Product picture may differ from actual product

Product No.: 97722256
DDA 30-4 AR-PVC/V/C-F-31U2U2FG

The SMART Digital DDA is a compact positive displacement, diaphragm dosing pump with variable-speed drive (stepper motor) and intelligent control electronics with minimum energy consumption. The SMART Digital Dosing series operates at full stroke length to ensure optimum accuracy, priming and suction, even for high-viscosity or degassing liquids. The duration of each discharge stroke varies according to the capacity set, resulting in optimum smooth and continuous discharge flow.

The click-stop mounting plate allows installation in three different positions without using any additional accessories. The control cube can be turned easily into front, left or right position. The click wheel and the multi-coloured backlit graphical, plain-text LC display make commissioning and operation intuitive. The control elements are protected by a transparent cover.

The dosing head is composed of:
- Long lifetime and universal, chemically resistant full-PTFE diaphragm.
- Double ball valves for highest dosing accuracy.
- Deaeration valve for easy start-up.

Operation modes:
- Manual dosing in ml/h, l/h or gph.
- Pulse control in ml/pulse (incl. memory function).
- Analog control 0/4-20 mA (scalable).
- Pulse-based batch function in ml, l or gal.
- Timer-based batch function (Dosing timer, cycle or week).
- Fieldbus control (Genibus prepared for ProfibusDP E-box).

Other features:
- Auto deaeration during pump standby to avoid breakdowns due to air-locking.
- Two SlowMode steps (anti-cavitation), 50 % (maximum flow: 15 l/h) and 25 % (maximum flow: 7.5 l/h), e.g. for high-viscosity or degassing liquids.
- Service information display to show when service and which wear-part order number is required.
- Two-step key lock function to protect the pump against unauthorised access.
- Additional display function to provide further information, e.g. the actual mA input signal.
- Counter for total dosed volume (resettable), operating hours, etc.
- Save and load customised settings as well as reload of factory settings.

Signal inputs/outputs:
- Input for pulse, analog 0/4-20mA, external stop.
- Input for low-level and empty-tank signal.
- Two potential-free output relays for max. 30 V AC/DC (configurable, e.g. alarm, stroke signal, pump dosing, timer etc.)
- Output analog 0/4-20mA.
- Fieldbus communication interface (GeniBus, also for additional Profibus DP E-box to retrofit).

Technical:

Type key:	DDA 30-4 AR-PVC/V/C-F-31U2U2FG
Max. Flow:	30 l/h
Max. flow in slow mode 50%:	15 l/h
Max. flow in slow mode 25%:	7.5 l/h
Min flow:	30,0 ml/h
Turn-down ratio:	1:1000
Approvals on nameplate:	CE,CSA-US,NSF61,EAC,RCM
Valve type:	Standard

Position	Qty.	Description

Maximum viscosity at 100 %: 150 mPas
Maximum viscosity in slow mode 50 %: 600 mPas
Maximum viscosity in slow mode 25 %: 1500 mPas
Accuracy of repeatability: 1 %

Materials:

Dosing head:	PVC (Polyvinyl chloride)
Valve ball:	Ceramic
Gasket:	FKM

Installation:

Range of ambient temperature:	0 .. 45 °C
Maximum operating pressure:	4 bar
Installation set:	NO
Installation type:	No installation set
Pump inlet:	4/6, 6/9, 6/12, 9/12 mm
Pump outlet:	4/6, 6/9, 6/12, 9/12 mm
Max. Suction lift during operation:	6 m
Max. Suction lift during priming:	2 m

Liquid:

Pumped liquid:	Water
Liquid temperature range:	-10 .. 45 °C
Liquid temperature during operation:	20 °C
Density:	998.2 kg/m³

Electrical data:

Maximum power input - P1:	24 W
Mains frequency:	50 Hz
Rated voltage:	1 x 100-240 V
Enclosure class (IEC 34-5):	IP65 / NEMA 4X
Length of cable:	1.5 m
Type of cable plug:	EU
Inrush current:	25A at 230V for 2ms

Controls:

Control variant:	AR
Level control:	YES
Analog input:	0/4-20 MA
Pulse control:	YES
Ext. Stop input:	YES
Analog output:	0/4-20 MA
Output relays:	2
Bus communication:	YES

Others:

Net weight:	3 kg
Gross weight:	4 kg

Certificate DE13/81841218

The management system of

Grundfos Management A/S

Poul Due Jensens Vej 7
8850 Bjerringbro
Denmark

has been assessed and certified as meeting the requirements of

ISO 9001:2008

For the following activities

Development, manufacturing, service, repair, sales and distribution of components, pumps, electrical motors, pump systems, equipment and services in connection with movement of liquids.

This certificate is valid from 15 February 2015 until 14 February 2018 and remains valid subject to satisfactory surveillance audits.
Re certification audit due before 31 December 2017
Issue 5. Certified since 17 June 2011

This is a multi-site certification.
Additional site details are listed on subsequent pages.

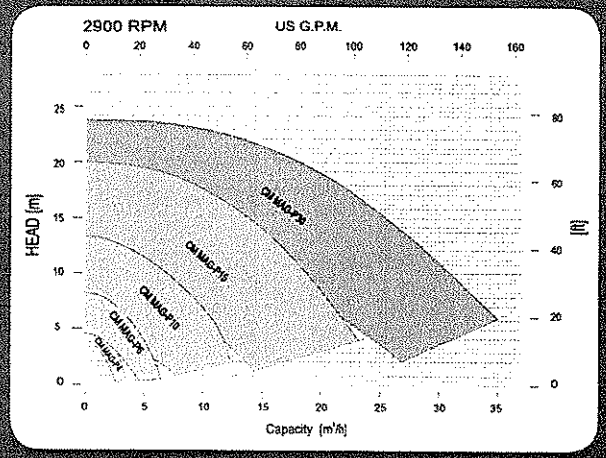
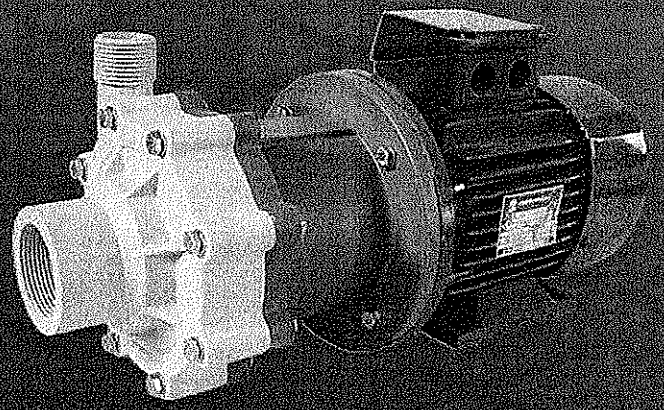
Performance curves



Pump construction and Operative Limits

Close-coupled drivers are conventional drivers mounted directly to pumps frame. No base, coupling or guards are required for this mounting style.

- Connections: Threaded BSP (GAS) & NPT
- Max viscosity: 200 cSt
- Max system pressure: 5 bar
- Flow up: to 35mc/h
- Head up: to 23 m
- Temperature range: from 24 °F (-5 °C) to +194 °F (+90 °C)
- Electric motors from 1,5Kw up to 5kW



CM MAG-P Series

The separation of liquid chamber/atmosphere by means of an isolation shell is the best solution to pump aggressive chemical, high purity liquids and liquids difficult to seal.

Hermetic sealless injection moulded thermoplastic pumps are the best solution for light duty applications.

A wide range of pumps covers the different performances.

Manufactured by:

M PUMPS

A unit of Mischiatti GROUP

M PUMPS s.r.l. - Via dell'Artigianato, 120
45015 Corbola (Ro) - Italy - www.mpumps.it

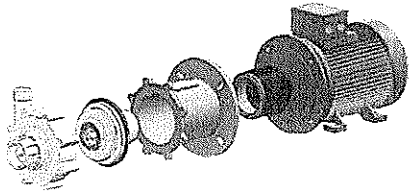
For more information please contact:

Printed on 06-06-2012

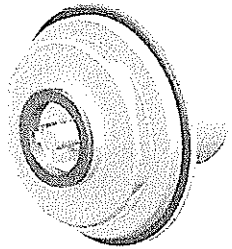
PUMP DETAILS

Making a comparison between this range of pumps and the other two M PUMPS series C MAG-P and C MAG-PL, the correct definition becomes few components (extremely easy maintenance), competitive prices, guaranteed chemical compatibility.



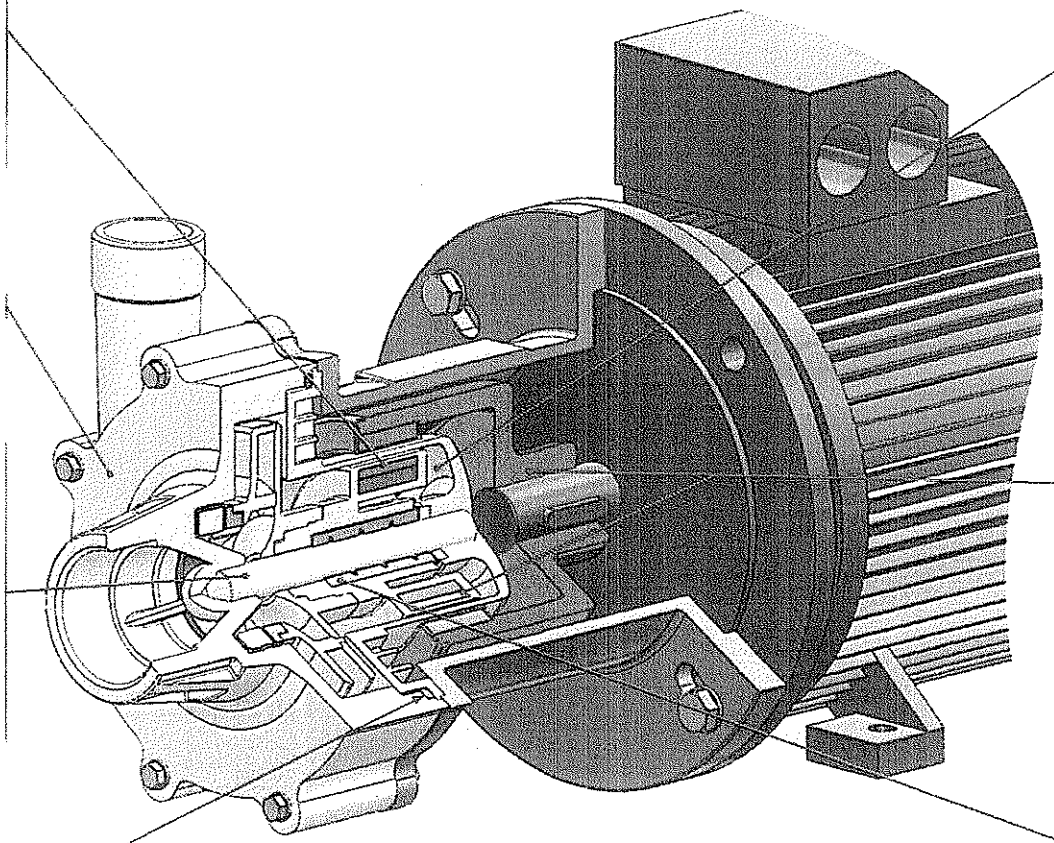
Pump casing shall be one single piece, injection moulded designs, made of GFR PP and CFR PVDF.

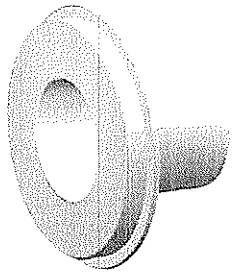
RWP QUICK CHANGE CARTRIDGE KIT
to guarantee an easy and fast maintenance, materials PP and PVDF.



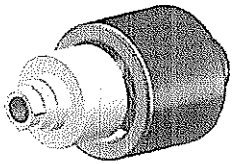
The sealing system with O-Rings prevents from leaking in the atmosphere – different materials available:

- EPDM
- VITON®





The rear shell is made of thermoplastic materials, ellipsoidal profile, zero magnetic losses, GFR PP or CFR PVDF materials.



High power synchronous magnetic coupling designed by our Technical Office and with magnetic elements mechanically locked.

Rare earth guarantee the magnetic-balancing to avoid the thrust bearings wear and the heat generation.

Field assembling of the product lubricated bearing arrangement does not require special tools.
The Shaft / Bearing materials are available in two different configurations to provide the best solution for each application:

- PTFEC – ALLUMINA 99,7% (standard)
- CARBON – ALLUMINA 99,7%

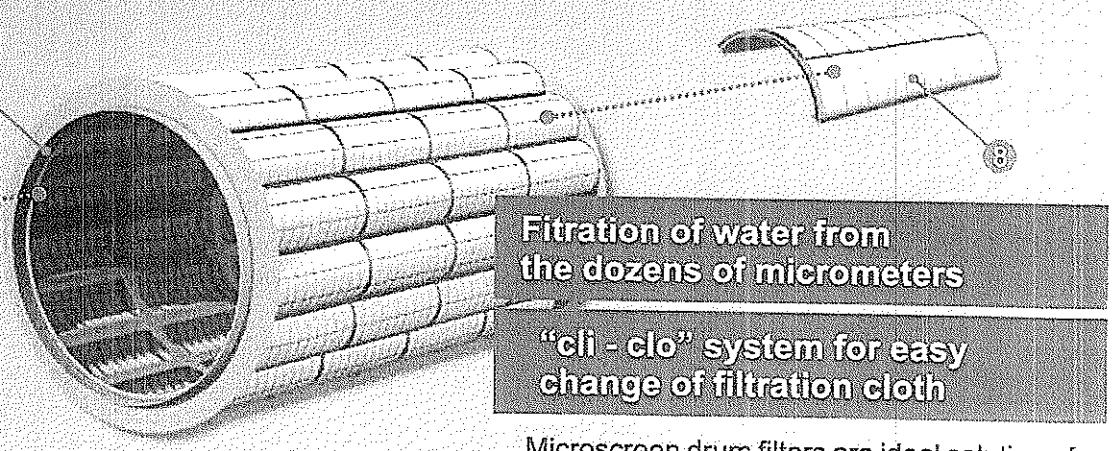
"cli - clo"



Fitration of water from the dozens of micrometers

"cli - clo" system for easy change of filtration cloth

Microscreen drum filters are ideal solution of filtration of wastewater at WWTP.

Another solution of their use is to filtrate water from papermill and textile industry, power plants, heating plants, fish farms, ZOOs and many other operations.

"CLI-CLO" SYSTEM

Princip is based on uniform cartridge for all the filter sizes.

Montage of filtration cartridge is done very quickly with no need of fixing elemnts neither the tools.

- designed for concrete channels or stainless steel tanks
- removing of SS, COD, BOD5 from the wastewater
- its own emergency overflow
- already filtrered water is used for backwash of filtration cloth
- made of stainless steel

Microscreen drum filter

Use

Microscreen drum filters of FB type are suitable for tertiary treatment, mainly for removal of undissolved matter in municipal and industrial waste water treatment plants. Further it is used in fish farms, food processing and paper manufacturing plants and for recycling of cooling water in power plants. In some cases filters can be used for recovery of rare substances.

Operation

Water containing solid particles flows through the inlet pipe (sewer) into the interior part of the filter drum. Impurities are caught on the inner side of the filter cloth and the filtered water flows through the cloth out. The entire filter remains off during this process. As the filter cloth slowly becomes clogged by the increasing amount of filtered debris, its resistance to the flow increases and the water level inside the filter drum rises. When the preset difference between the levels inside and outside of the filter drum is reached, the water level sensor positioned at the front of the filter, is automatically activated. Simultaneously the drum drive and the backwash pump/-s which pumps the filtered water into the jet rinse system are activated. The debris accumulated on the inner side of the filter cloth is removed by the directed jet stream of water from the nozzles and then washed into the waste trough positioned in the inner drum. The debris is then washed into the sludge tank where it is washed out by the sludge pump. This pump is automatically controlled by the level sensors located on the wall of the sludge tank. If there is a gravitational discharge pipe, the sludge pump is not necessary.

After the rinsing process is finished, hydrostatic pressure drops. The rinsed cloth is moved to the bottom of the filter by the rotation of the drum, the difference in levels inside and outside the drum diminishes and the sensor automatically switches off the drum rotation and the pump. The rotating drum and the pump remain off until reactivated. This operation mode repeats in cycles. The ratio of the rest cycle and the rotation cycle depends on the amount of detritus flowing into the filter, its character and the condition of the filter cloth.

As the flow of untreated water remains uninterrupted throughout the entire filtration process, and the flow of the rinse water is taken directly from the filter, no additional backwash trays or sludge trays are needed. This significantly reduces investment costs.

The automatic activation and deactivation of the filter reduces the amount of electricity needed for the operation of the filter. It also improves the average quality of the water filtered (creation of auxiliary filtering layer), increases the density of the effluent sludge and prolongs the life of the entire system.

Right choice

The basic parameter of the filtering capacity of the filter is the effective area of the filter cloth which is given by the selected filter size. The second parameter is the size of pores in the filter cloth and the third is its free functional area. Filtering capacity is also considerably influenced by the **character of filtered solids,** such as shape of filtered solids (flat particles clog pores more easily than round ones), mechanical strength (cohesive particles are easier to filter than non-cohesive, mucous ones) and the proportion of small and big particles in the total volume of influent water. At a certain quantity of cohesive particles bigger than the pores in the filter cloth, a thin layer of sludge is formed – secondary filter layer, capable of catching particles which are considerably smaller than the size of pores in the filter cloth. Therefore it is advisable to select a filter with a bigger filter area so the idle time of the filter is long enough to create a secondary filter layer on the inside part of the filter cloth. This layer is washed away into the waste trough during backwash of the filter cloth.

3/12/18

All the above mentioned criteria, which normally are not constant, influence the immediate filtering capacity of the filter.

Filter cloth with the pore size of 0.04mm have proved to work well for microscreen filters used for tertiary treatment in municipal and industrial waste water treatment plants. In the case of big pollution of waste water or in the case of special usage, the size of the filter and parameters of the filter cloth must be selected based on the experience with filtration in the similar conditions or by a filter test.

In any case it is recommended to consult the type of filter to be used with IN-EKO representative and to know **the average amount of undissolved matter** in water which is to be filtered, proposed **average flow** through the filter and estimated **maximum flow** through the filter.

Filters are manufactured in several versions to satisfy possible requirements of the designers:

1. Installation into the concrete channel

The base is a concrete channel of accurate dimensions according to the design drawing, with an overflow edge. There is also a service area and a by-pass channel.

The overflow edge is not part of the delivery and must be absolutely waterproof!

There must be no reinforcing or other bearing partitions in the channel for the filter e.g. for gratings and they must not, in any way, narrow the channel.

The cover of the channel and service tank must be insulated and made of solid material to prevent it from freezing. The filter can be supplied with an insulated cover, it is used in cases when it is not possible to insulate the channel or when the filter reaches over the channel. This way the cover is protected against freezing and there is no danger of rupture of the filter cloth by ice.

Service area:

- The main advantage of the drum innovation is that it is not necessary to remove the filter from the channel (there is "cli-clo" system) when changing the filter cloth (filter sections). The service area provides good access to the filter.
- Regular check of the filter (checking the function of the level sensors, sludge pump, drive, etc.) can be easily performed from the service area.
- The sizes of the service tank are given in the design drawings. Normally the service area should be at least 700mm wide, and the height of the edge between the filter and the service area should be 1,100mm.

By-pass channel:

- The filter itself has only an auxiliary bypass!
- The basic function of this channel is cheaper and faster service of the filter.
- In the case of excessive flow or breakdown of the filter, water level in front of the filter rises quickly. This is signalled by water level sensors. For the lifespan of the filter it is not good for the drum to rotate with such quantity of water. It is, therefore, necessary to avoid water flow to the filter and to use a bypass facility.
- The bypass channel can be shut in two possible ways:
  - *Passive:* overflow edge
  - *Active:* manual or electrically controlled sluice gate which opens if there is an overflow or breakdown.
- It must be designed in such a way to have enough capacity to manage full bypass of the filter (battery). If there is an overflow edge, it must be designed in such a way to ensure smooth overflow and be long enough.

3/12/18

The inlet area and bypass channel should be covered by a grating.
If there is a danger of freezing, it is necessary to insulate the channel.

The standard delivery of the filter includes a sludge tank and a sludge pump, which is automatically activated by a water level sensor to empty the tank when it is full. There is also a possibility of gravitational discharge upon agreement with the sales representatives of our company.

The filter can be installed to the concrete channel into batteries (more filters for one inlet). Each filter operates independently but all the filters are set to one another to operate fully automatically. There can be only one switchboard for several filters. Each filter should have a service channel either together with another filter or separate.

All filters are equipped with a cover.

2. Installation into the steel tank

The filter can be used on an open area. The filter is connected by pipes. The diameters of the connections can be changed within a certain range. Standard connecting points for inlet and outlet are ended with flanges.

The standard delivery of this filter includes a sludge tank.
Sludge discharge can be done in two possible ways, which can be combined:

- Gravitational discharge, sludge is discharged by gravitational flow
- Sludge pump situated in the tank where sludge is pumped away.

The switchboard, if part of the delivery, is recommended to be positioned directly on the filter. It is necessary to ensure good access to the switchboard.

The filter should be installed in places where it does not freeze. If it is not possible to ensure this, the filter must be equipped with an insulated cover for the filter as well as the sludge tank. Normally, the filter is not insulated all.

Two types of water level sensors can be used for the filter:

- Contact:
  - Three sensors at the inlet of the filter (switch-on, switch-off and emergency)
  - Two sensors in the sludge tank (switch-on and switch-off)
  - It is possible to mechanically set levels by the sensors.

- Pressure:
  - Only one sensor at the inlet of the filter and in the sludge tank (2pcs in total)
  - The switchboard controlling these sensors includes PLC (logo siemens)
  - Levels can be easily set in the PLC.

In both cases level sensors must be cleaned of impurities (see the manual).

Installation of the filter

The filter, mainly when installed in the concrete channel, must be positioned in such a way so the water level on the influent side of the filter ranges within the limits (see the design drawings). The water level in the preliminary devices (secondary settling tank, flotation unit DAF,...) must be at least 100mm higher than maximum (emergency) level of the filter.

3/12/18

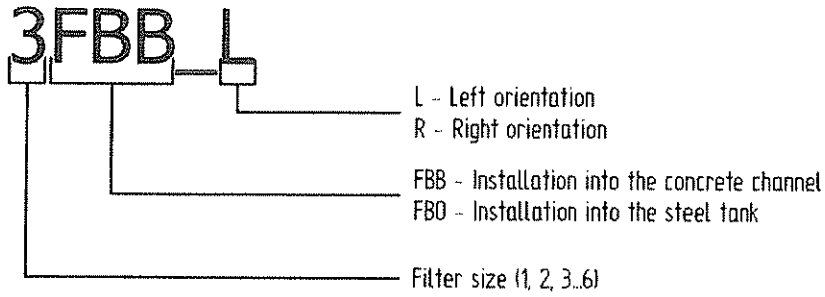
The flow of inlet water to the filter must be gradual, water must not splash or whirl or bounce off. Therefore, in the case of the filter to the concrete channel, it is necessary to have a stilling chamber (see the drawing). Another solution is to have inlet under the water level in front of the filter (water flows and does not splash). In the case of the filter installed in the steel tank, the solution is to have a stilling chamber placed in front of the filter.

It must be possible to stop the inlet to the filter (e.g. using a sluice gate) and empty the tank with the filter. The bypass of the filter can be equipped with an overflow edge (**of necessary length**!) or electric sluice gate.
Inlet water to the filter must be removed of impurities exceeding 10mm, sharp impurities, grit, fat and sticky substances.
Every filter produces sludge. The concrete filter usually contains a sludge tank from which the sludge is pumped by a sludge pump. The sizes of connecting points are given in the drawings. In the place of the installation of the filter the coupler for the sludge pump pipe must have a backflow valve. If there is a danger of freezing, the coupler must be insulated or heated. If there is a gravitational discharge pipe for sludge, it is necessary to prepare pipes for connection.

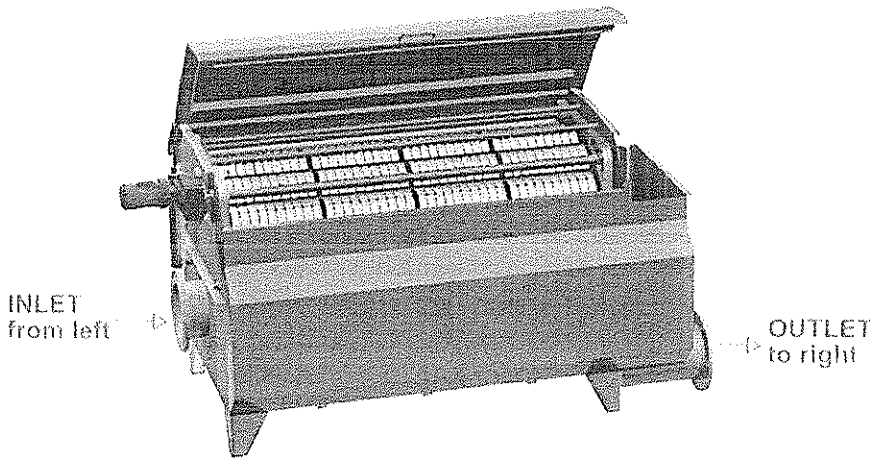
The filter can be equipped with a terminal board, free cables or cable bundle in the gooseneck. This cable line must be preset according to applicable standards as well as the position of the switchboards.

A lifting device for filter assembly must be prepared at the channel with the appropriate load (according to the type of the filter) so the filter can be set in the channel.

Type designation



Note:the filter side orientation is established when looked at the filter from the side of the opening cover. When water flows through the filter from left to right, it is the right version and vice versa. (see the figure below)



Right-hand model of the filter

3|12|18

Innovation of the filter drum

A new type of filter drum was developed in order to simplify replacement of filter cloth (now filter sections). This easy replacement makes the process faster and the service cost-efficient. Innovation of the filter sections also increases the life span and resistance of the filter cloth.

The size of the filter is given by the number of sections in a row and along the circumference of the filter drum (see Tab. 1)

FILTER TYPE	NUMBER OF SECTIONS IN ONE ROW	NUMBER OF ROWS	TOTAL NUMBER SECTIONS
1FBO	1	7	7
1FBB	1	7	7
2FBO	2	9	18
2FBB	2	9	18
3FBO	3	12	36
3FBB	3	12	36
4FBO	4	15	60
4FBB	4	15	60
5FBO	5	18	90
5FBB	5	18	90
6FBO	6	23	138
6FBB	6	23	138

Tab. 1

The installed section already contains the filter cloth and its replacement is done piece by piece using the "cli-clo" system.

Filter area of the drum

FILTER TYPE	FILTER AREA OF THE DRUM in m^2	APPLICABLE FILTER AREA OF THE DRUM in m^2

5FBB		
6FBO	13.104	8.736
6FBB		

3/12/18

Tab. 2

The switchboard must be placed in such a way to enable a visual check of the operation of the filter. If the delivery includes a switchboard and assembly, IN-EKO representative must be informed of the location of the switchboard and cable line one week before the assembly!

Replacement of filter cloth using the "CLI-CLO" system:

- The filter cloth is attached to a plastic frame which constitutes a separate filter section, the same for all filter types. The number of filter sections to be replaced depends on the size of the filter.
- Replacement of filter sections is very easy, there are no fixtures or couplers.
- The lifespan of the filter cloth is considerably higher. The filter cloth can be made of polyamide or stainless steel.

- There is no inbuilt bypass of filter itself!
- Placement of switchboard is recommended to be above the crest
- It is possible to have two different options of sludge outlet at this device. It is not possible to combine these options. First option is the gravity outlet which solved via U-pipe with extended pipe. The second option consists of sludge tank and sludge pump
Dimensions: Lenght: 2260mm
Width: 1150mm
Height: 1250mm

Junction box
MICROSCREEN DRUM FILTER 4FBB_R
- Crest is not part of supply, must be completely waterproof
- It is useful to built bypass because of better maintenance of filter, as filter in flooded channel can not be maintenanced
- Vital to build Maintenance area, allows faster change of cartridges with filtration cloth, better access (maintenance)
- No braces across the channel neither along the walls inside the channel are allowed, otherwise filter can not be installed
- Vital to hold channel depth or at least elevation of the wall between maintenance area and filter channel (1160 mm) because of maintenance and opening of filter cover
- Filter itself is equipped with only partial bypass, not the full bypass
- Placement of switchboard is recommended to be above the crest
- It is not possible to combine these options. First option is the gravity outlet which solved via U-pipe with extended pipe. The second option consists of sludge tank and sludge pump
Dimensions: Length: 2500mm
Width: 1300mm
Height: 1460mm
Weight: 860Kg

3/12/18

Working platform:

If the filter design does not enable to build a service channel (e.g. due to insufficient space), it is possible to use a working platform, which can be supplied together with the filter upon agreement with the IN-EKO representative. It is a stainless steel platform which enables better access to the filter, which is set deep in the channel.

MICROSCREEN DRUM FILTER	4FBO_R

- Sludge outlet from the sludge tank can be solved with two different ways and also can be both command together. - first option is the gravity outlet (where the pipe can for example be equipped with sample and water flows out by gravity). - the second option is to use the sludge pump. The pump s run is based on the signal from probe.
- Probes on inlet as well as the outlet (sludge tank), if the sludge pump is used, can be of different types. - It is possible to use contact water level sensor or pressure probe (function is still same)

3/12/18

Dimension chart of steel filters

FILTER TYPE	LENGTH [mm]	WIDTH [mm]	HEIGHT [mm]
1FBO	1330	910	1360
2FBO	1840	1170	1260
3FBO	2660	1380	1490
4FBO	3130	1560	1600
5FBO	3450	1680	1950
6FBO	4420	2080	2370

Tab. 3

Mounting ramp, shown in the drawing for 5FBO and 6FBO filters is not part of the delivery. This ramp (platform) can be made and supplied with the filter upon an agreement with the IN-EKO representative.

Connecting sizes for filter inlet and outlet in the steel tank:

FILTER TYPE	INLET [DN]	OUTLET OF PRETREATED WATER [DN]	OUTLET FROM SLUDGE TANK [DN]	DISCHARGE VALVE OF THE TANK ["]
1FBO	150	150	80	2
2FBO	200	200	80	2
3FBO	250	250	150	2
4FBO	300	300	150	2
5FBO	350	350	150	2
6FBO	500	500	150	2

Tab. 4

3/12/18

Dimensions of switchboards and their stands

A stand for a switchboard is necessary if the switchboard is not positioned directly on the filter or on the wall next to it, but e.g. on the floor near the filter or directly on the concrete channel. Figures 3-5 show the recommended shapes of stands for the switchboards. Fig. 6 a 7 show 2 standards types of switchboards for our filters. One is for a filter with pressure sensors and the other for a filter with contact sensors.

Stands for switchboards:

If mounted on the concrete channel:

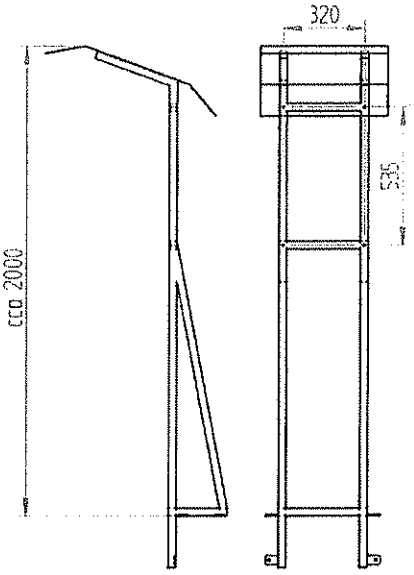

Fig. 3 – for a filter with contact sensor

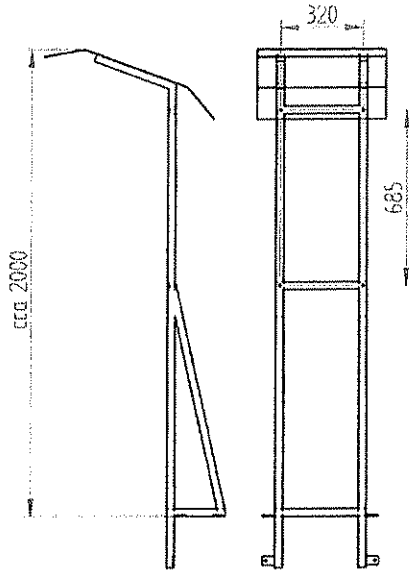

Fig. 4 – for filter with a pressure sensor

If mounted on the floor:

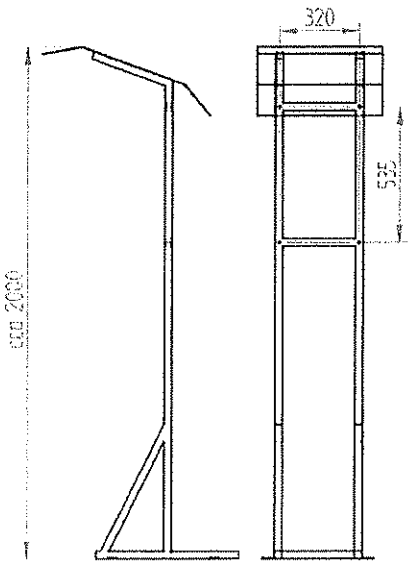

Fig. 4 – filter with a contact sensor

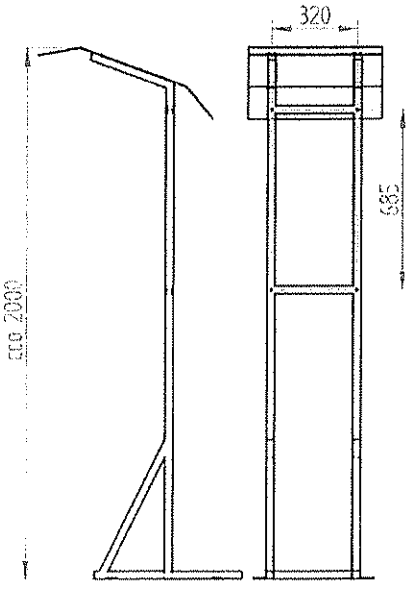

Fig. 5 – filter with a pressure sensor

BUREAU VERITAS
Certification

Certifikát

udělený organizaci

IN - EKO Team s.r.o.

Sídlo: Zatloukalova 172/4, Ivanovice, Brno
Provozovna: Tišnov, Trnec 1734
Česká republika

Bureau Veritas Certification Holding SAS – UK Branch tímto osvědčuje, že systém managementu výše uvedené organizace byl posouzen a shledán ve shodě s požadavky následující systémové normy:

Norma

ISO 9001:2008

Oblast certifikace
(Oblast certifikace je platná pouze pro provozovnu)

NÁVRH, VÝVOJ, VÝROBA, PRODEJ A SERVIS ZAŘÍZENÍ PRO ČIŠTĚNÍ ODPADNÍCH VOD. PROVÁDĚNÍ ZÁMEČNICKÝCH PRACÍ.

Počáteční datum certifikačního cyklu: 16. ZÁŘÍ 2016

Tento certifikát platí – za předpokladu následného uspokojivého udržování funkčnosti systému managementu do: 15. ZÁŘÍ 2018

Datum počátečního schválení: 30. ZÁŘÍ 2004

Číslo certifikátu: CZ005250-1/A

Verze 1, Datum revize: 16. ZÁŘÍ 2016

Podepsáno jménem BVCH SAS UK Branch

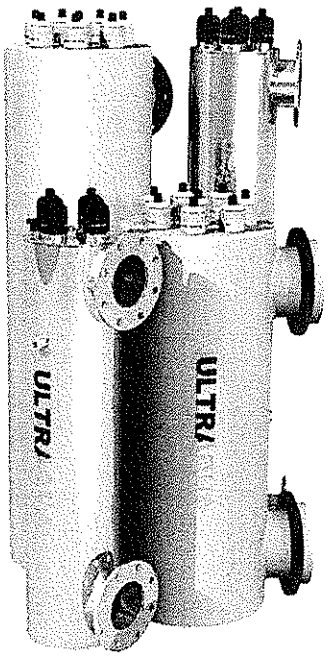
ULTRAAQUA

UV DISINFECTION SYSTEMS



PROPOSAL FOR UV-DISINFECTION SYSTEM

UV-SYSTEM:	MonoRay 16-220 SS Channel
Company:	**KARKANIAS SA**
PROJECT:	WWTP DANILOVDRAD MONTENEGRO
APPLICATION:	Channel UV-disinfection
DATE	30-08-17

3/12/18

ULTRAAQUA COMPANY

Ultraaqua has been leading manufacturer of UV-disinfection systems for more than 25 years.
Ultraaqua's design team employs dedicated scientists and engineers with research careers of the highest academic level and many years of experience in design and operation of water treatment facilities.
The application expertise by our sales teams ensure correct model selection and sizing. Engineering and design group provide unmatched operation performance with regard to both disinfection efficency and life cycle cost.
Uncompromized product quality results in very long life time even in harsh and corrosive environments. High product quality and performance efficiency goes hand in hand with all major international standards such as CE, UL, DVGW, ÖNORM. High quality is also reflected in the fact that Ultraaqua warrant all products two years.
Ultraaqua is represented globally. UV-systems have been installed in more than 100 countries in a broad range of applications.

ULTRAAQUA MAJOR BENEFITS

Years of intensive research and and product optimization has resulted in superior market leading performance.
All UV-systems are designed, manufactured and tested in Denmark.
Most important features related to quoted UV-system:

- More than 15 years experience with open channel UV-systems
- Reactor in electro-polished AISI316L stainless steel
- ECOTEC electronic lamp driver technology
- Advanced LPHO amalgam UV-lamps
- 16000 hours lamp life time
- Full UV-Lamp and system state control
- Optional channel type UV-sensor
- Two years warranty from start up

QUOTED UV SYSTEM

Application data and calculated UV-dose from performance model simulation is seen in following table.
Please note that Ultraaqua UV-dose calculation is always done based on radiation emission data for used UV lamps.

Quoted UV system		MonoRay 16-220 SS Channel
Design flow rate	M3/h	108,0
Design UV transmittance pr 10 mm, UVT	%	70
Design UV dose, EOLL	mJ/cm2	> 85
Calculated UV dose, EOLL	mJ/cm2	86,3

3/12/18

TECH NOTES

UV-dose in mJ/cm2 can be calculated by dividing J/m2-value with 10.
UV-dose in µWs/cm2 can be calculated by multiplying J/m2-value with 100.

UV transmittance or UVT is a measurement of the amount of ultraviolet light at 254 nm that passes through a water sample compared to the amount of light that passes through a pure water sample. The measurement is expressed as a percentage, % UVT. UVT can vary over time and from site to site as it is related to the quantity of organics, colloidal solids and other material in the water which absorb the UV light as it passes through the water column. The effective UV dose is dependent primarily on the combined effects of the UV light intensity, the exposure time and the UVT. Always consult Ultraaqua specialist if in doubt about specific UVT values. Different pathogens require different amounts of UV energy to inactivate them. Therefore, for any UV system, it must be clear which pathogens are to be inactivated. The UV dose required to achieve different log removals of pathogens vary. For example to achieve 99% removal (log 2) removal of Cryptosporidium requires approx 60 J/m2. To achieve 4-log removal (99.99% removal) requires 220 J/m2 (under laboratory conditions). It is important to note that the relationship between the dose and the log removal, the so called dose response, is not linear. It takes a very much higher dose to achieve log-4 removal compared to log-2 removal. Please also note that parasites and especially virus in general require higher UV-doses compared to bacteria such as E.coli.

WARRANTY

Ultraaqua UV-systems are warranted for 2 years. The warranty covers reactors, mechanical parts and electrical components. Excludes consumable spares & labour. Warranty cover material properties, but it exclude damage as a result of corrosion. It is buyers responsibility that material component properties match operating conditions.

3/12/18

ADDITIONAL SALES TERMS

All our deliveries and services are exclusively subject to our General Terms of Delivery, which are available under http://www.ultraaqua.com/support/terms-and-conditions/ and which we will also transmit to you upon request. Any implied or statutory warranty, including the warranty of fitness for a particular purpose, is excluded to the extent permitted by applicable law. You are solely responsible to check, whether the products are suited for the intended use, in particular whether the products can be operated in your system and whether the desired results will be achieved. Ultraaqua assumes unlimited liability for claims under the Danish Product Liability Act, for claims which are based on fraudulent misrepresentation or wilful intent, and in cases where a liability of Ultraaqua cannot be excluded under mandatory law. In all other cases, the total liability of Ultraaqua for the customer's claims for damages is limited to the order value. Ultraaqua shall under no circumstances be liable for any loss of profit, any indirect, special or consequential loss or damage, costs, expenses or other claims for consequential compensation whatsoever, arising out of or in connection with this purchase order. Any implied or statutory warranty, including the warranty of fitness for a particular purpose, is excluded to the extent permitted by applicable law. You are solely responsible to check, whether the products are suited for the intended use, in particular whether the products/systems can be operated in your system and whether the desired results will be achieved.

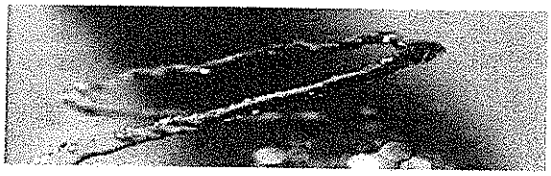
ULTRAAQUA OPEN CHANNEL UV-SYSTEM SPECIFICATIONS MR16-220SS AISI316L



ULTRAAQUA

ULTRAAQUA A/S
Tømmervej 7
9220 Aalborg Ø, Denmark

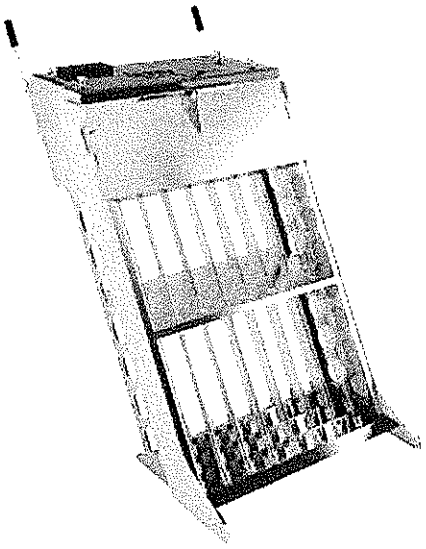
WWW.ULTRAAQUA.COM

Design and dimensioning have been based upon numerous tests, screening of every relevant scientific publication and lots of experiences from several hundred high flow UV-systems installed worldwide.

UV-dose:
The UV system is designed to deliver effective UVC doses calculated using peak flow rates and conservative estimates for water UVT. Doses are calculated at end of lamp life time and after reductions for limited quartz sleeve fouling.
This channel UV-system is equipped with automatic quartz sleeve cleaning system and UV-intensity monitoring.
Lamp life-time is 16000H.

UV-Lamp bank/reactor:
The reactor is made of high quality stainless steel AISI316L. The reactor is designed for very low head loss. It can be installed either vertically or vertically angled to fit lower water depths. Please remember that due to the length of the UV-lamp one meter service area is needed above. The reactor is equipped with overheat protection.
Options include:

- Water level control
- Water flow guide plates
- UV-intensity sensor
- Automatic cleaning system



Lamp bank shown with tilted configuration

Service work incl. quartz sleeve and UV-lamp replacement is done without the need of any tools. Quartz sleeves can be cleaned in a few minutes. Quarts sleeves are typically cleaned every 6-12 months.

Control cabinet:
Cabinet is designed for installation in industrial environments. Standard enclosure material is GFRP. It has a user-friendly touch display for easy access to settings and performance data.
Control of lamp start and switch off as well as system state can be remotely controlled/monitored as standard. SCADA via MODBUS is optional.

Both reactor and control cabinet can be customized to fit almost any requirements.

Please contact ULTRAAQUA or representative for more information.

3/12/18

Specifications

Ultraaqua UV-system	MR16-220 SS Channel
Reactor units	
Reactor material	AISI316L
Minor parts materials	PTFE/PVDF/VITON/POM
Reactor configuration	1 bank with 16 lamps each vertically installed
Channel widths	604 +/-8,0mm
Water level, min / max	1120/1400 mm
Max head loss @ 1000 m3/h	35 mm
Guide plate for hydraulic control	Yes
Temperature sensor	Danfoss pT100
Dimensional drawings	Upon request
Manufactured in	Denmark
UV lamps	
Lamp type	Low pressure high output amalgam
Lamp power pr. lamp	220W
Number of UV-lamps	16
Lamp lifetime	16000H
Wire coating	PTFE
Manufactured in	Germany
Lamp drivers (ballasts)	
No of drivers pr. system	4
Product	4x220W UltraAqua 220W series
Type	Electronic HF modbus controlled
Serial communication	Modbus Daisy chain RJ45 wiring
Power Factor	> 0.98
Efficiency	95% at nominal power
Continuous monitoring	Individual electrical lamp parameters
Protection	Ground fault, temperature, input voltage
On-board diagnosis	LED indicators
Manufactured in	Holland
Control cabinet	
Material	GFRP (optional Stainless steel AISI304)
HMI	3.4" touch sensitive menu driven screen
System control	PLC
Installation	Wall mount
Cabinet dimension	700x500x300mm
Lamp cable length	5,0m (max length 30,0m)
Lamp cable type	Silicon acc. UL Style 4476 and CSA AWM II A/B
Power supply	3x400VAC+N+Pe,47-63 Hz
Power	3,9 kW @ 100% power level
Temperature	0-45 °C
Thermal control	Forced cooling
Rel. humidity	20-95% non-condensing
Enclosure type	IP54 (Optional IP55-IP68)
Approval	CE
Manufactured in	Denmark
Control features	
Lamp dimming	60-100% (UV-dose)
Lamp state indication	Individual
Accessible information	Reactor temperature
	Lamp hour
	Individual lamp state

3/12/18

	Individual lamp driver state
	Individual lamp electrical data
	Individual lamp driver temperature
	Individual lamp driver power input
	Remote control state
	Wiper system state (opt)
	Cleaning cycles (opt)
	UV-intensity (opt)
Alarms	Reactor temp. pre- and main
	Cabinet temperature
	Lamp state pre- and main
	Lamp driver state pre- and main
	UV-intensity pre- and main (opt)
	Wiper system (opt)
Digital inputs	Remote ON/OFF
Digital outputs	Main alarm
	Lamps ON signal
Analog output (4-20 mA)	UV-intensity (opt)
Optional intensity sensor	
No of sensors	1
Type	Digital silicium carbide vertically mounted
Manufactured in	Germany
Optional fully automatic quartz sleeve wiping system	
Wiper rings	Long life PTFE
Motor type	Integrated servo
Service feature	Full access to UV-lamps and quartz sleeves without dismantling wiper system
Optional water level control	
Type	Level switch
Material	AISI316L

Manufacturer:
All Ultraaqua UV-systems are manufactured by ULTRAAQUA A/S in Denmark using the stringiest quality measures.

Warranty:
2 years from date of invoice.

(SPECIFICATIONS ARE SUBJECT TO CHANGE)

Υποβρύχια αντλία λυμάτων — Rexa PRO V05 DA-222 / EAD1X2-T0025-540-O

Τεχνική περιγραφή
Υποβρύχια αντλία λυμάτων, ως υποβρύχιο συγκρότημα με κινητήρα, για σταθερή, κατακόρυφη τοποθέτηση, για άντληση ανεπεξέργαστων, χημικά και μηχανικά μη διαβρωτικών για την αντλία, λυμάτων. Ακτινικά διατεταγμένο στόμιο κατάθλιψης και αξονική αναρρόφηση. Το συγκρότημα είναι κατασκευασμένο με τρόπο εύκολο για τη συντήρηση. Οι παροχές πρέπει να εξασφαλίζονται κατά ISO 9906 Παρ. A.

Remarks regarding the selection process

The mixing result depends on the functional quality of the plant equipment in the mechanical treatment stage (preliminary treatment). Mineral fractions (grit and sand) must be always excluded from the process and cannot be kept in suspension. It is absolutely required to check the values mentioned above with the actual values on site.

Selection of submersible mixers

Proposal

Type	TR 36.145-4/12 S17	
Quantity	1	
Frequency	50	Hz
Rated power	4,5	kW
Propeller speed	1400	1/min
Power factor (ISO 21630)	141	N/kW
Propeller diameter	0,25	m
Maximum power input	5,8	kW
Power input in duty point	*1 4,95	kW
System-dependent power input	*2 4,46	kW
Power density	*3 14	W/m³
System-dependent power density	*4 12,6	W/m³
Distance to water surface	0,5	m

*1 Measurement at static thrust acc. to ISO 21630 (inflow velocity ~0, Open Sea conditions).
*2 The power consumption of the mixer will be reduced in proportion to the flow velocity which is generated in the tank.
*3 According to ISO 21630.
*4 According to site conditions.

Important note

Installation of the mixer(s) according to installation sketch. Before installing the mixers, the up-to-date tank plans must be submitted without previous request to WILO SE, Hof for revision.

To guarantee a continuous operation, the minimum water cover above the propeller specified by WILO must be ensured.
Please check if our basic data are identical to your application and, if necessary, inform us in writing about modifications/objections. The aforementioned mixer(s) selection data are integral part of our warranty, whereas our warranty comes only into effect, when the submersible mixers are installed according to our recommendation. Because the overall function depends considerably on the correct positioning of the submersible mixers, we will not accept any warranty claims which result from positioning which we did not approve explicitly. Also zones of weak flow due to the tank geometry are not part of our warranty. The values of maximum power input, power input in the duty point and energy density are valid for clean water. Furthermore the use of our submersible mixers in patented procedures or under trade mark rights of third parties is excluded from our liability.

[1]In case of rectangular or round tanks the average flow velocity above the tank section cannot be guaranteed.
For the selected tank shape no directed circulating flow can be generated for physical reasons. The calculated average flow velocity refers only to an undirected turbulent flow.

3|12|18

All attached notes relating to the product and the selection are part of the technical selection of WILO SE.

Hints

The enclosed installation proposal is a schematic drawing and not according to scale. It serves as orientation guide. In case of order, the feasibility of this installation has to be matched with the tank drawing and the actual conditions. If there is an inflow and/or outflow in the immediate vicinity of the mixer, the mixer position must be checked based on updated tank plans to avoid bad influences on the mixer and short-circuit flows.

Technical data

Submersible sewage pump FA 20.54E

with motor T 24-4/29K

Tender text
Submersible Sewage Pump as submersible, single-stage block unit in stationary, vertical installation to pump untreated sewage which doesn't attack the pump neither chemically nor mechanically. Pump with radially arranged discharge piece and axial pump intake. Service-friendly design by separated motor and pump casing. Pumping values to be guaranteed as per ISO 9906 Annex A Submersible motor in pressure-resistant design, double mechanical shaft seal in EMU block design, as well as separate sealing chamber with medical white oil. Motor chamber dry. Sealing of the motor at the shaft by a double, wear-resistant mechanical shaft seal independent of the direction of rotation entirely made of silicon-carbide as closed unit, in stainless steel sealing cartridge. Both seals in the sealing cartridge are cooled and lubricated by medical white oil.Power supply cable and control cable with longitudinally tight cable trumpet, cores embedded in casting resin and soldered strands as additional protection against penetrating humidity by capillary action. Protection of the motor winding by thermistors installed. Both closed ball bearings are maintenance-free and filled with high-quality-grease. Possibility for retrofitting a moisture probe by means of a pencil electrode as protection against penetrating humidity. All casing parts are of cast iron. Shaft and connecting elements are of stainless steel.

Sludge pumping

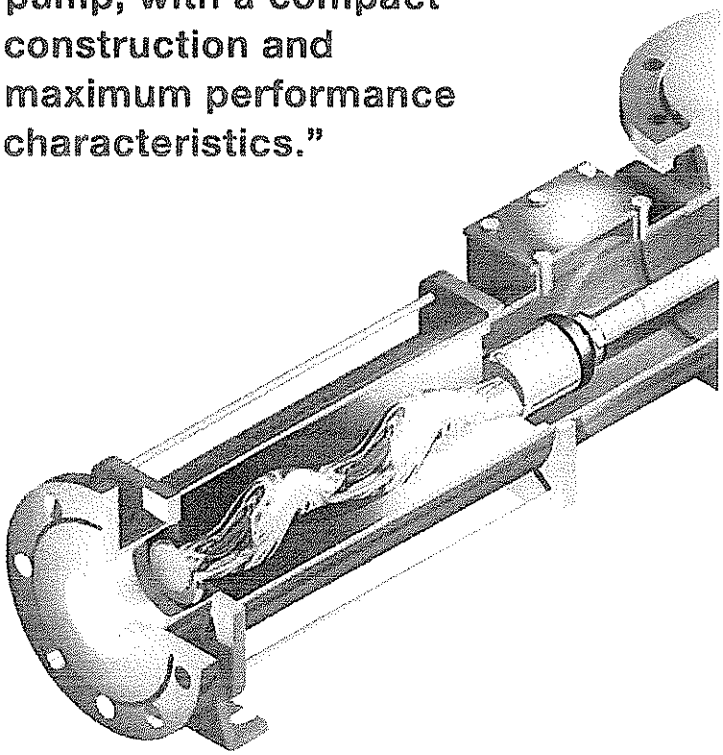
Features & Benefits

Capacity	up to 440m³/h
Pressure	up to 24 bar
Temperature	-10°C up to 100°C

Typical applications include:

- Domestic and industrial effluents
- Hydrated lime slurry
- Sludge
- Shear sensitive latex emulsion
- Milk curds, sauces, fruit juices
- Industrial chemicals and detergents
- Starch slurries
- Coating clays, gypsum and silicate
- Paper stocks
- Agricultural slurries

"A competitively priced progressing cavity pump, with a compact construction and maximum performance characteristics."



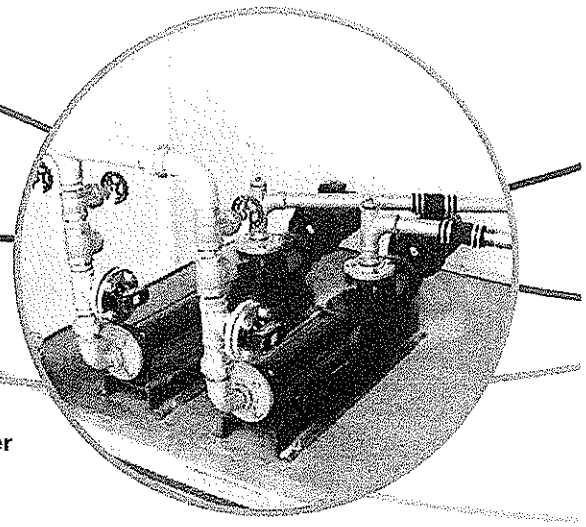
Materials of construction
Available in cast iron or stainless steel, with a choice of rotor and stator materials to suit individual applications e.g. hard chrome plated rotor or natural rubber stator.

High pressure / long haul pumping
Can offer considerable project cost savings by utilising small bore pipework and eliminating the need for a series of pumps, when pumping over long distances or with high head requirements.

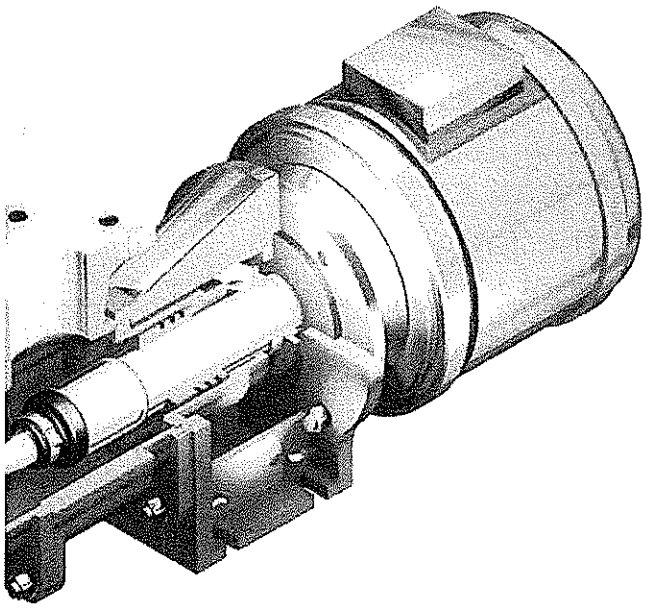
Low running speeds
Reduced wear for a longer working pump life which extends the periods between routine maintenance. Think of the savings you could make on abrasive applications.

To minimise the impact on the environment, this has been printed on recycled paper

3/12/18



Waste water pumping



Compact unit
As the drive forms an integral part of the unit, the pump is ideal for space-saving installations.

Gentle pumping action
Minimises shear and crush damage to the pumped product.

Surface mounted
Making it easier, cleaner and less hazardous for maintenance.

Up to 8.5m suction lift
Deep sumps can be easily pumped without the use of submersible equipment.

Plug in shaft
Ease of maintenance when assembling or dismantling, with extraction facility.

Viscous products
The pump can be supplied with a square inlet and conveyor to assist viscous slurries into the pumping element.

Inspection cover
Available for applications where rag content is a problem.

Baseplate
Pumps are supplied on a baseplate to ease installation.

Sealed joints
Fully sealed drive train to maximise life and minimise downtime.

Shaft sealing options
Packed gland or single and double mechanical seals are available.

Versatile
Can be installed vertically or horizontally to suit the application. Can be run in either direction.

Robust drives
Specially selected drives and gearboxes for longer life. Options include electric motor drive units supplied as overhead vee belt driven, direct-coupled or variable speed drives with mechanical variable speed or frequency inverter.

Duracoat coating
Rotors can be supplied with Mono's range of specialist coatings to help extend the life of the rotors by increasing wear and corrosion resistance.

Handles gas entrainment
No air or gas locking in the pump. The positive seal formed by the interference fit between rotor and stator enables the pump to self prime and it also allows tri-phase liquids i.e. solids, gases and liquids to be handled easily.

Certificate of Approval

This is to certify that the Management System of:

NOV Process & Flow Technologies UK Limited

Greengate, Middleton, Manchester, M24 1SA, United Kingdom
has been approved by LRQA to the following standards:

ISO 9001:2008

David Derrick
Issued By: Lloyd's Register Quality Assurance Ltd

Current Issue Date: 11 December 2016
Expiry Date: 14 September 2018
Certificate Identity Number: 10006275

Original Approvals:
ISO 9001 1 June 1990

Approval Numbers: ISO 9001 – 00004265

The scope of this approval is applicable to:

Design, manufacture, installation, service and repair of progressing cavity positive displacement pumps, pumping systems , screening equipment, disintegrators, drive arrangements and ancillary plant and provision of associated spares

For the attention of the Accounts Manager

Dear Sir or Madam

Change of Name for Mono Pumps Limited

With effect from 1 July 2015, Mono Pumps Limited will change its name to **NOV Process & Flow Technologies UK Limited.**

<u>What is changing and why?</u>
The only detail that is changing is the legal entity name. Mono Pumps Limited will be renamed **NOV Process & Flow Technologies UK Limited**. The reason for the change of name is that the entity now supplies an increased number of branded products and it is no longer relevant to solely refer to one of those brands in our legal entity name.

<u>What is remaining the same?</u>
This is simply a change of name for a legal entity you are already trading with. The company is still registered in England under registration number 00300721 and its registered office remains Stonedale Road, Oldends Lane Industrial Estate, Stonehouse, Gloucestershire, GL10 3RQ.
The VAT number remains GB 582 8958 76.

You can reach all of your contacts as normal at Greengate, Middleton, Manchester, M24 1SA.

Our Bank details will remain the same although the bank account name will change as follows:

Account Name:	NOV Process & Flow Technologies UK Limited
Bank:	Barclays Bank Plc
Address:	163-165 Union Street Aberdeen, AB11 6AL
Sort Code:	20-00-77
Swift:	BARCGB22

Account **Sterling**:
Account Number : 73135497
IBAN : GB23BARC 200077 73135497

Account US Dollar:
Account Number: 54306488
IBAN : GB58BARC 200077 54306488

Account Euro:
Account Number: 89853577

Data for selection

Mixed liquid

Kind	Activated sludge	
Density	1000	kg/m³
pH value	7	
Temperature	20	°C
Dry solids content	0,5	%
Flow behaviour	Newton flow	
Kind of thickening	None	
Additional thickener	No	

Solids

Origin	Municipal	
Kind	Sludge	
Solid size	Not determined	

Mixing task

Operating mode	Continuous	
Mixing task	Suspend	
Average calculated flow velocity[1]	0,3	m/s

Tank

Material	Concrete	
Outlet	On bottom, laterally at the tank edge	
Tank shape	Round tank	
Tank volume	60,87	m³
Vertical / inclined walls	Tank with vertical walls	
Upper diameter	5	m
Tank height	3,1	m
Maximum filling level	3,1	m
Minimum filling level	3,1	m
Relevant filling level	3,1	m

Preparation

Preparation	Screen with gap width < 10 mm, but no pre-clarification

Remarks regarding the selection process

The mixing result depends on the functional quality of the plant equipment in the mechanical treatment stage (preliminary treatment). Mineral fractions (grit and sand) must be always excluded from the process and cannot be kept in suspension. It is absolutely required to check the values mentioned above with the actual values on site.

Selection of submersible mixers

Proposal

Type	TR 21.145-4/11 S14	
Quantity	1	
Frequency	50	Hz
Rated power	1,3	kW
Propeller speed	1390	1/min
Power factor (ISO 21630)	200	N/kW
Propeller diameter	0,21	m
Maximum power input	1,74	kW
Power input in duty point	*1 1,2	kW
System-dependent power input	*2 1,08	kW
Power density	*3 19,7	W/m³
System-dependent power density	*4 17,7	W/m³
Distance to water surface	0,2	m

*1 Measurement at static thrust acc. to ISO 21630 (inflow velocity ~0, Open Sea conditions).
*2 The power consumption of the mixer will be reduced in proportion to the flow velocity which is generated in the tank.
*3 According to ISO 21630.
*4 According to site conditions.

Important note

Installation of the mixer(s) according to installation sketch. Before installing the mixers, the up-to-date tank plans must be submitted without previous request to WILO SE, Hof for revision.

To guarantee a continuous operation, the minimum water cover above the propeller specified by WILO must be ensured.
Please check if our basic data are identical to your application and, if necessary, inform us in writing about modifications/objections. The aforementioned mixer(s) selection data are integral part of our warranty, whereas our warranty comes only into effect, when the submersible mixers are installed according to our recommendation. Because the overall function depends considerably on the correct positioning of the submersible mixers, we will not accept any warranty claims which result from positioning which we did not approve explicitly. Also zones of weak flow due to the tank geometry are not part of our warranty. The values of maximum power input, power input in the duty point and energy density are valid for clean water. Furthermore the use of our submersible mixers in patented procedures or under trade mark rights of third parties is excluded from our liability.

[1]In case of rectangular or round tanks the average flow velocity above the tank section cannot be guaranteed.
For the selected tank shape no directed circulating flow can be generated for physical reasons. The calculated average flow velocity refers only to an undirected turbulent flow.

All attached notes relating to the product and the selection are part of the technical selection of WILO SE.

Hints

The enclosed installation proposal is a schematic drawing and not according to scale. It serves as orientation guide. In case of order, the feasibility of this installation has to be matched with the tank drawing and the actual conditions. If there is an inflow and/or outflow in the immediate vicinity of the mixer, the mixer position must be checked based on updated tank plans to avoid bad influences on the mixer and short-circuit flows.

Max. weight* m	40 kg
Protection class	IP 68
Explosion protection	ATEX, FM
Ex classification ATEX	II 2G EEx d IIB T4
Ex classification FM	CLASS I, DIV. 1, GROUPS C, D; CLASS II, DIV. 1, GROUPS E, F, G; CLASS III

* ∞ maximum weight including accessories

Propeller	
Propeller model	2-blade propeller with self-cleaning hub; backward-curved as a result clogging- and entwining-free
Nominal propeller diameter	210 mm
Propeller speed n	1392 rpm
Transmission ratio	1
Fill quantities and types	
Filling sealing chamber	White oil
Fill level sealing chamber V	0.35 l

Motor data	
Type of motor	T 12-4/11 (Ex)
Motor type	Submersible motor according to DIN/VDE 0530 (IEC 34)
Mains connection	3~400 V, 50 Hz
Rated current I_N	3.3 A
Starting current - direct I_A	16 A
Starting current - star-delta I_A	6 A
Power consumption P_1	1.74 kW
Rated power P_2	1.3 kW
Rated speed n	1392 rpm
Motor efficiency level	-
Efficiency η_M	75.0 %
Power factor $\cos \varphi$	0.76
Fluid temperature T	+3 ... +40 °C
Max. immersion depth	20 m
Insulation class	H
Max. switching frequency t	15 /h
min. switching break t	3 min
Starting torque M	19.8 Nm
Moment of inertia	0.0021 kg/m^2
Motor bearings	1 grooved ball bearing
Materials	
Motor housing	EN-GJL-250
Motor shaft	1.4021
Static seal	FPM
Sealing on pump side	SiC/SiC
Sealing on motor side	SiC/SiC
Propeller	1.4571

2. INTRODUCTION

Dear Sirs,
thank you very much for your inquiry. We are pleased to provide our Quotation for **N. 1 ALFA LAVAL dencanter centrifuge model ALDEC 45 VFD,** which is recommended by Alfa Laval Corporate AEBE (AL) for the *WWTP DANILOVDRAD MONTENEGRO.*

The equipment described in this proposal is recommended on the base of the received requirements.

Our local Service can be on your site for maintenance, repairs and installation optimization very quickly. Spare parts are stored in 3 Regional Distribution Centers (Netherlands, Singapore, USA) to guarantee spares delivery in less than 48 hours.

For further details we invite you to examine also the possible documents attached.

Finally, for any further questions or clarifications about it you can contact us directly:

George Asteris
Regional Sales Manager, Food & Water Division
Tel direct: +30 210 668 35 72 mobile: +30 6932402332

3. PROJECT DATA

3.1 GENERAL DATA

Sludge origin	Municipal
Sludge type	Oxidation Ditch Sludge
Duty	Dewatering

Hydraulic feed flow rate of the equipment (m^3/h)	≤5
Sludge feed concentration (%)	≤2,5
Solids load (KgSS/h)	≤125
Estimated concentration of inlet volatiles (%)	≤70

Centrifuge Performance expected:

Expected cake solids (%)	Dewatering: ≥23±1
Expected recovery (%)	≥95
Expected polymer dosage consumption (Kg/t SS)	≤10 The expected consumption refers to a polyeletrolite with an activity of 100%. Possible changes in the sludge type could required the change of the used polyelectrolyte terms of type and quantity. The control, choice and supply of the polyelctrtolyte according to the sludge carachteristics is part of the WWTP management and is a customer's responsibility. The use of a polyeletrolyte not correctly selected can influence the decanter performances.

3/12/18

3.2 HAZARDOUS COMPOUNDS

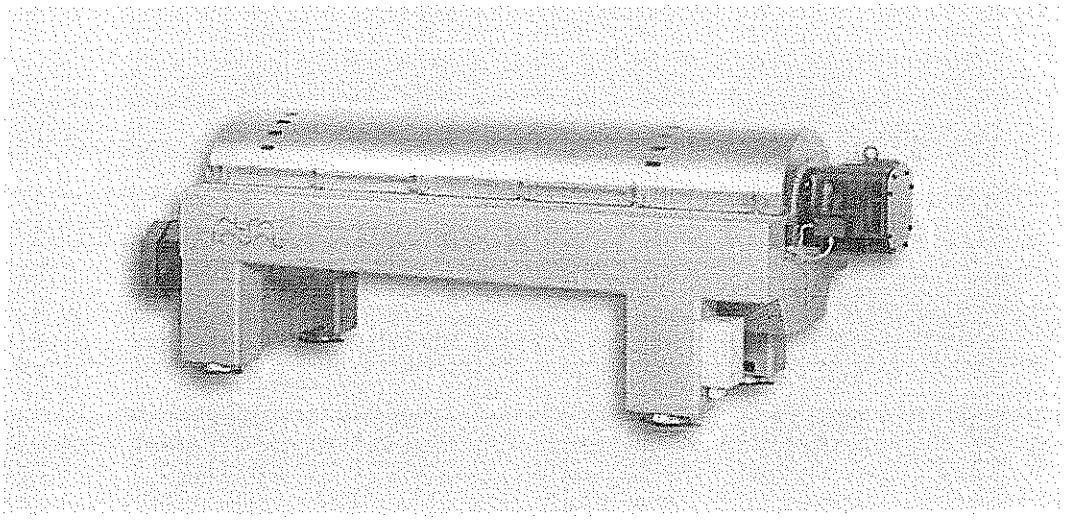
EROSIVE COMPOUNDS*	Silicates e Sands > 500 ppm
CORROSIVE COMPOUNDS	Cl- Fl- and other corrosive coumpounds
OTHER COMPOUNDS	FeO_2 and F_eO_3
PARTICULATE (organic and inorganic) WITH DIMENSIONS *	> 5mm

*=we suggest, if not already existing, to install before decanter a macerator and a grit chamber.

3/12/18

4. GENERAL DESCRIPTION

4.1 CENTRIFUGE MODEL ALDEC GENERAL DESCRIPTION



Alfa Laval Decanter ALDEC

The ALDEC is an open, non-pressured horizontal centrifuge. It features a solid horizontal bowl and scroll type conveyor, with counter current flow design.

Gearbox
The gearbox is equipped with a three-stage planetary gear reducer unit which controls the maximum differential speed between the centrifuge bowl and conveyor.

Frame and Casing
The frame and casing is a box beam profile type with integral casing. The inside surface of the casing consists of steel liners in the discharge areas and a painted surface in the neutral compartment.

Conveyor
The screw conveyor includes a forward type feed zone and a baffle disc.

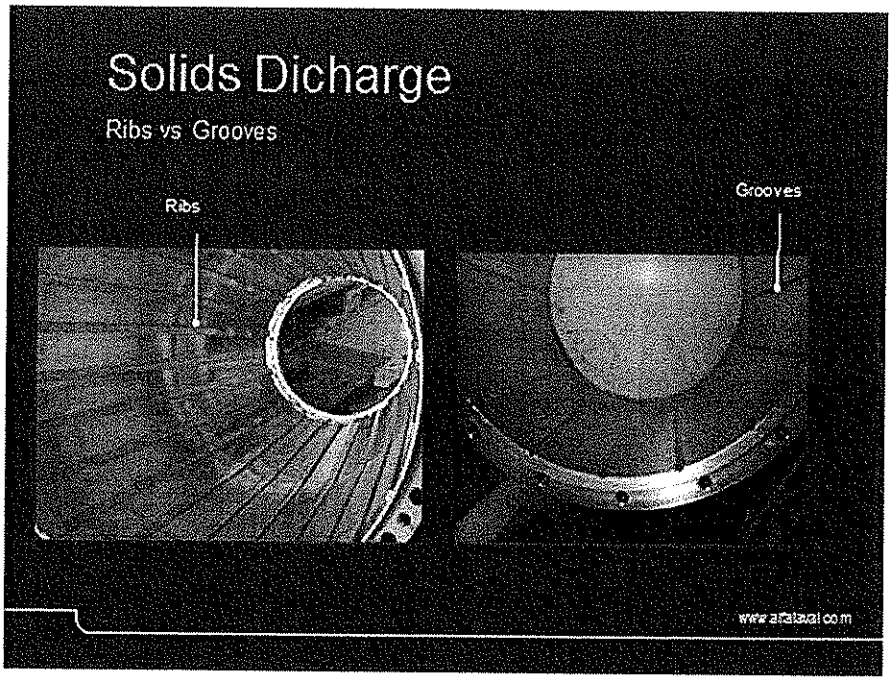
Bowl
The bowl is manufactured from a centrifugal fusion.
Prior to final machining, all surfaces are examined for cracks, shrinkage, prodity or other defects.
The clarified liquid leaves the bowl by flowing over adjustable plate dams into the casing.

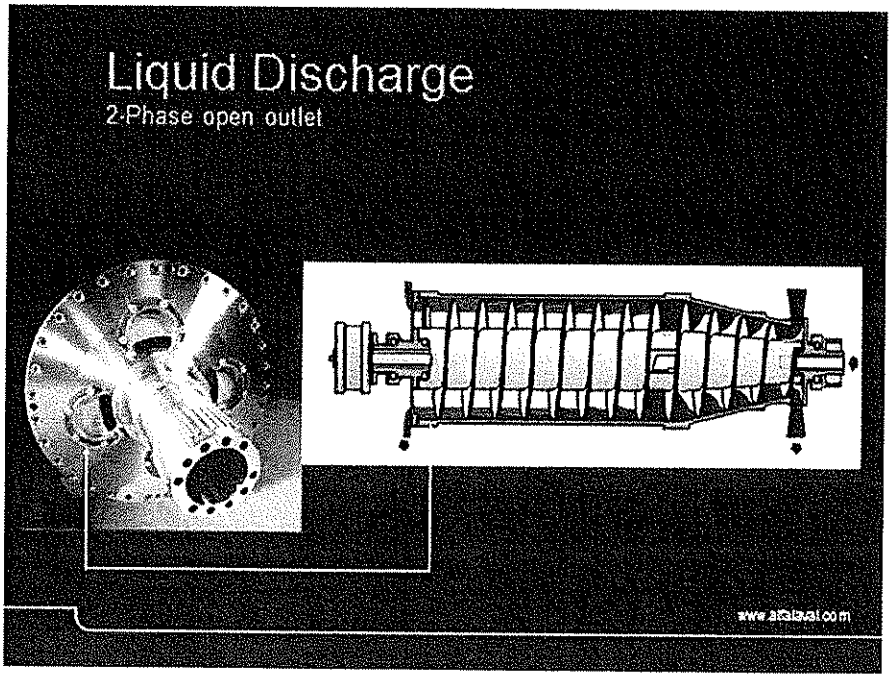
Wear Protection
The conveyor flights are protected with TM40 flame sprayed tungsten carbide on the tip only.
The conveyor feed zone is protected with flame sprayed tungsten carbide.
The solids dicharge area is protected with a wear liner of tungsten carbide.
A wear liner is installed in the upper casing.

3/12/18

Electrical Components and Control Systems

The electrical components consist of a main-motor drive and a back-drive motor type ABB with VFD.





3/12/18

4.2 DATA SHEET ALDEC 45

N° 1 BOWL	
Diameter	360 mm
Lenght	1512 mm
Maximum main speed	4.200 rpm
G-force at operating speed	3.549 g
Material - bowl shell	AISI 316
Material - hubs	Duplex SS
Materiale – bolts	AISI 316
Beach angle	20°
WEAR PROTECTION	
Solids trasportation aids, cylindrical and taper section	Ribs in AISI 316
Solids dicharge	Tungsten carbide
N°1 CONVEYOR	
Pitch	130 mm
Flight thickness	4 mm
Material flights and hub	AISI 316
WEAR PROTECTION	
Flame sprayed tungsten carbide on tip flights.	
N°1 FRAME AND CASING	
Type frame-casing	Box beam profile with integral casing
Material - frame	Mild steel colour medium blue NCS 3560 R75B
Material casing	SS AISI 316
Wear protection	Wear liner in AISI 304 on discharge area/ discharge clarified
N°1 MAIN MOTOR	
Type ABB, VFD 15 kW , 3x380V, 50 Hz. IP55 type.	
N° 1 BACK DRIVE	
Type ABB, VFD 5.5 kW , 3x380V, 50 Hz. IP55 type.	
N° 1 GEAR BOX	
Type	Planetary 2 stage
Ratio	1: 159
Max. torque	2,5 kNm
Max differential speed and torque	44 rpm at 2,5 kNm
Differenzial speed conveyor regulation	by inverter
N°1 CONTROL SYSTEM	
Type BCC. See decription below.	
LUBRIFICATION	
Grease.	

3/12/18

4.3 NOISE DECLARATION ALDEC 45

RUMORE ALDEC 45		
Bowl speed [rpm]	Sound power L_{wAd} [B(A) re 1pW]	Sound pressure L_{pAd} [dB(A) re 20mPa]
4.200	9,7	79

L_{wAd} : declared A-weighted sound power level from the decanter.
L_{pAd} : declared A-weighted emission sound pressure level in a free field over a reflecting plane at 1 m distance from the decanter

Uncertainty on declared values:
L_{wAd} : K_{wA} = 2 dB
L_{pAd} : K_{pA} = 4 dB

The emission sound power level is measured according to ISO 9614-2 while operating the decanter with water as process medium. The sound pressure level is determined from the measured sound power level according to EN ISO 11203.

The sound pressure level can vary – 1 dB a + 2 dB at different positions around the decanter.
Noise emission data for the decanter declared in accordance with the requirements in EN ISO 4871 e EN 12547.

4.4 OTHER EQUIPMENTS

N°2 CONTROL PANEL	• Control panel in compliance with the technical specification.
OTHER	• N.1 Intermediate Kit conveyor bearings • N.1 set of liquid levels • N.1 set of special tools • N. 1 instruction manual in english + N. 1 copy on CD • Packing according to our standard
ENGINEERING	Unless otherwise specified the decanter will be installed according to the P&ID attached.

3/12/18

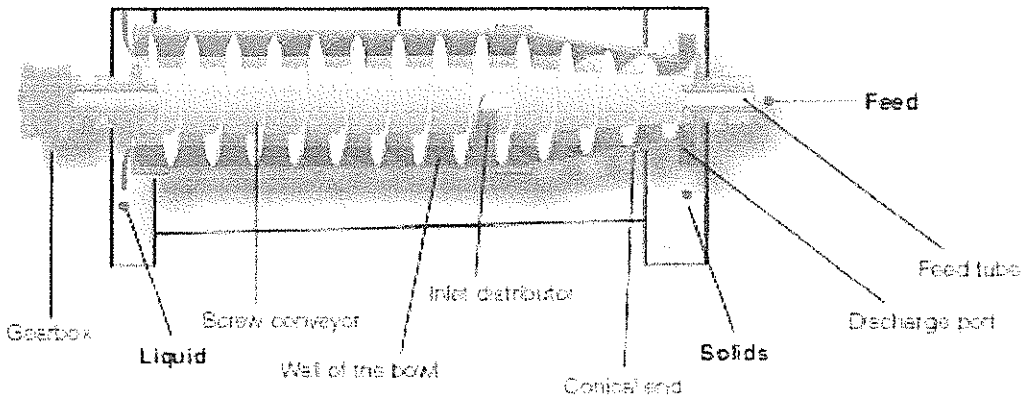
4.5 DECANTER OPERATING PRINCIPLE

WORKING OPERATION

The solid-liquid separation takes place in a horizontal cylindrical bowl equipped with a screw conveyor. The feed enters the decanter at the intersection of the conical and the cylindrical part of the bowl through a central feed pipe in the hollow drive shaft. After leaving the feed pipe, the feed suspension is distributed into the rotatign liquid in the bowl and smoothly accelerated to the full rotational speed. The centrifugal force makes the solids settle at the bowl shell. The screw conveyor continuously transports the solids toward the conical end of the bowl and through conical bowl part.

The separation takes place throughout the total length of the cylindrical part of the bowl, and the clarified liquid discharges at the large end where it flows over the rim of exchangeable and/or adjustable plate dams or power tubes.

The solids are discharged from the small end by centrifugal force through outlet opening.



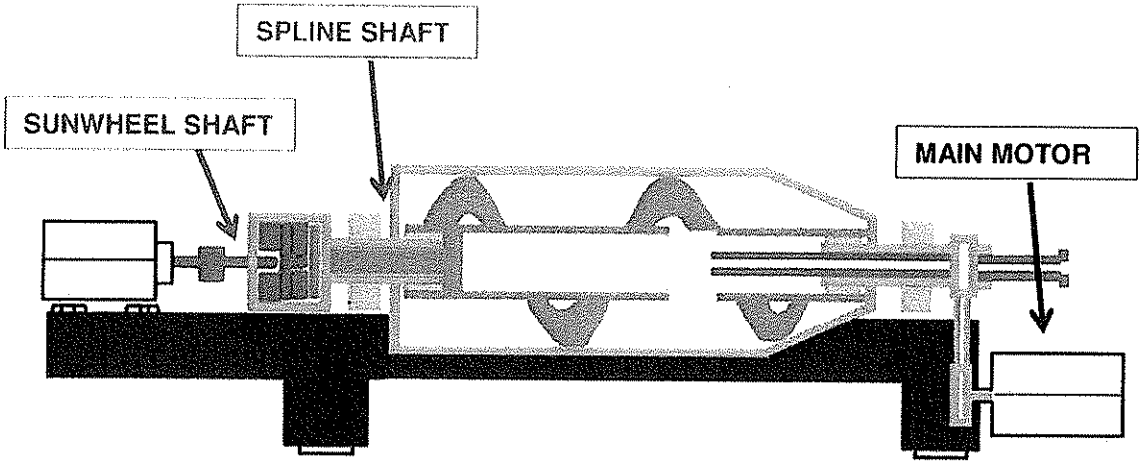
DRIVE SYSTEM

The decanter is driven by an electric motor. The motor shaft carries a drive pulley, and motive power is trasmitted through V-belts to the bowl pulley to drive the bowl.
Power is transferred to the conveyor via a planetary gearbox.

Gearbox (GB) lower the supplied power from the BackDrive (BD) and allows for the torque required by the conveyor. It's all about controlling the Sunwheel Shaft (SS) speed.

The SS is connected directly to the BD system. Controlling the SS speed controls the speed of the Spline shaft which is directly conneted to the conveyor speed and thereby controls the differential speed. The planetary GB has two stages. To create a differential speed with a planetary GB it's required to brake the SS duting normal operation. To run with higher differential speed the direction of SS hence the direction of the BD needs to be reversed.

3/12/18



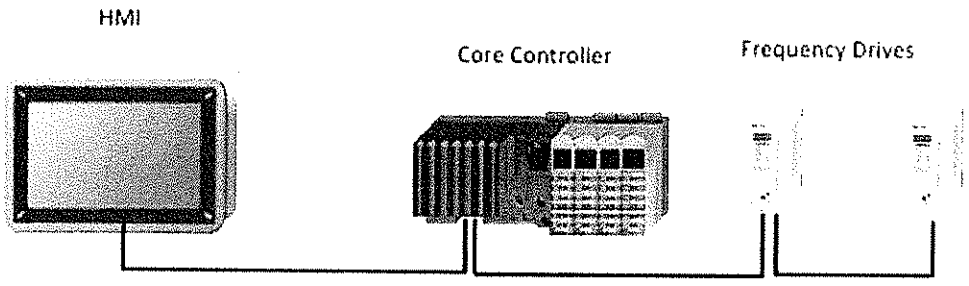
THE BASIC CORE CONTROLLER

The differential speed is controlled by a decanter controller, which takes care of all basic control functions related to the decanter. Each decanter is delivered with the Basic Core Controller (**BCC**). This control package is capable of fully controlling the decanter operation, ensuring the most efficient performance and keeping costs for installation, commissioning, operation and maintenance to a minimum.

The decanter BCC control system consist of:

- HMI panel,
- Core Controller;
- Frequency Drives.

The components are connected with bus communication as illustated below.

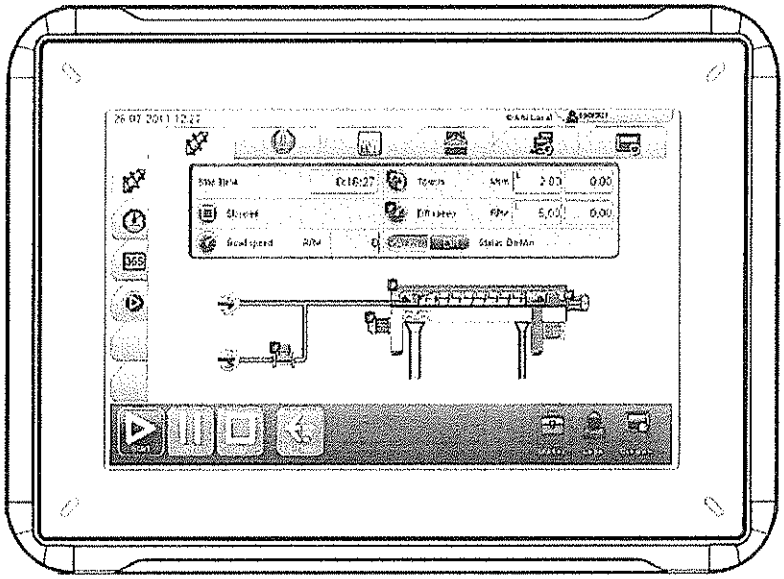


- **HMI panel**: is a 7"touch panel and handles the interaction between the human user and the control system (view machine and process variables, issue commands, adjust setpoint, acknoledge alarms, manual control of equipment and signal forcing and system configuration);
- **CORE CONTROLLER**: the essential job of the Core Controller CPU is to control the differential speed of the screw conveyor inside the decanter. Other tasks of the Core

3/12/18

Controller are: control the torque on the screw conveyor, maintain the control sequence of the machine and control auxiliary equipment and processes;

- **FREQUENCY DRIVES**: control the speed of the maindrive and backdrive motors on the decanter. Parameter setup, speed setpoints, alarm handling etc. in the frequency drives is managed by the Core Controller.



3/12/18

5. SPARE & WEAR PARTS FOR 1 YEAR OF COMMISSIONING

Listed below are the spare parts for 1 year of operation. They are provided with the decanter.

Description	Serial number	Quantity
GEAR OIL 4 L	6120367110	2
GREASE	6120367150	6
O-RING	6116720741	2
GASKET	52259102	4
BALL BEARING	1217400	2
LIP SEAL	6116732324	2

No wear parts are required.

3/12/18

6. BATTERY LIMITS

- Electric energy: at electrical terminal and decanter motors
(if control panel is supplied by AL: at electric switches)
- Sludge to treat: at sludge inlet connection installed as shown in the drawing attached (point A)
- Polyelectrolyte in emulsion already mixed: at inlet connection as shown in the drawing attached (point D)

3/12/18

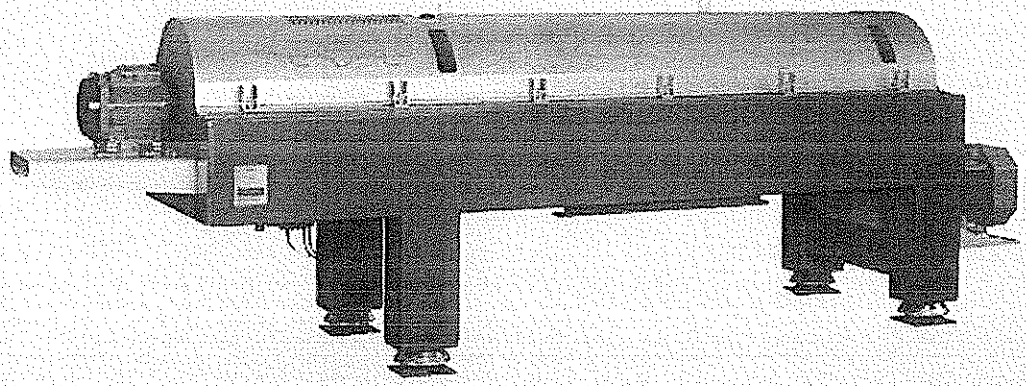
ALDEC

High-performance decanter for sludge thickening and dewatering



Applications

The Alfa Laval ALDEC range of decanter centrifuges are designed with a focus on cost-efficiency, reliability and easy operation. They are used for thickening and dewatering of sludge from municipal and industrial water and waste treatment plants.

ALDEC decanter centrifuges are capable of handling a wide range of flow rates. They are designed to be efficient, simple to install, easy to maintain and straightforward to operate. Installation, operating and service life costs are minimal.

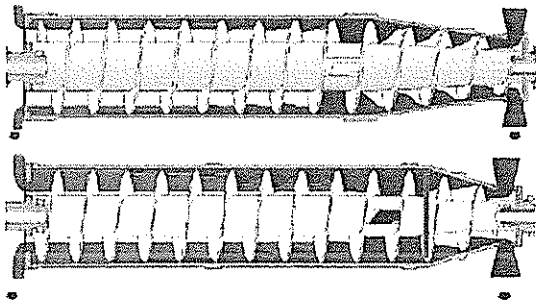
Benefits

The ALDEC decanter centrifuge design provides a series of concrete benefits

- Reduces sludge volume, which cuts down on transport and disposal costs
- High capacity at small footprint: Compact, modular design saves space
- High performance combined with low energy consumption.

Features

- Critical parts made of wear-resistant material
- Fully open feed zone for improved separation
- 360° solids discharge to avoid blocking
- Baffle disc provides higher capacity and drier cake solids
- Steep or shallow cone configuration for optimum separation of any type of slurry
- Variety of conveyor design depending on type of slurry
- Variety of wear protection of conveyor flights for any demand
- Complete, fully enclosed cleaning-in-place (CIP)
- Floater disc for light particle removal (optional)

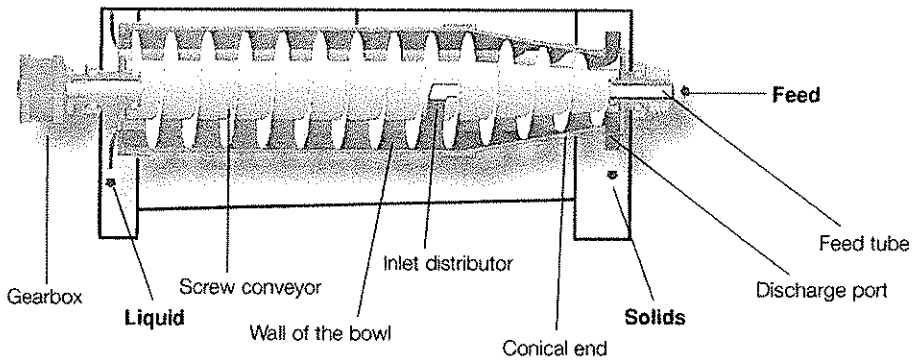


Shallow vs Steep cone configuration

Working principle

Separation takes place in a horizontal cylindrical bowl equipped with a screw conveyor (see drawing). The feed enters the bowl through a stationary inlet tube and is accelerated smoothly by an inlet distributor. The centrifugal force that results from the rotation then causes sedimentation of the solids on the wall of the bowl.

3/12/18
l



The conveyor rotates in the same direction as the bowl, but slightly slower, thus moving the solids towards the conical end of the bowl. The cake leaves the bowl through the solids discharge openings into the casing. Separation takes place throughout the entire length of the cylindrical part of the bowl, and the clarified liquid leaves the bowl by flowing over adjustable plate dams into the casing.

Process optimization
ALDEC decanter centrifuges can be adjusted to suit specific requirements by varying

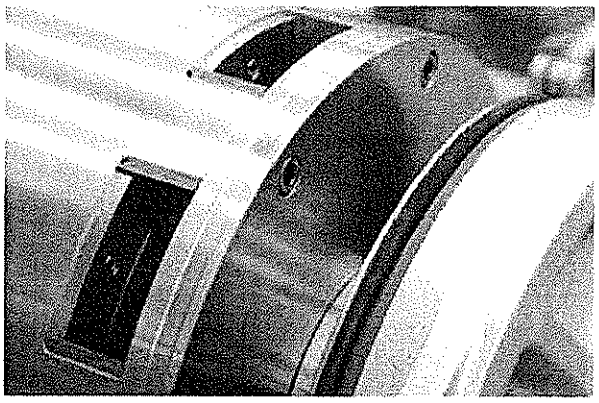
- the bowl speed to obtain the G-force required for the most efficient separation
- the conveying speed for the most efficient balance between liquid clarity and solids dryness
- the pond depth in the bowl for the most efficient balance between liquid clarity and solids dryness

Design
The rotating part of ALDEC decanter centrifuges is mounted on a compact, in-line frame, with main bearings at both ends. Vibration dampers are placed under the frame. The rotating part is enclosed in a casing with a cover and a bottom section with integrated outlets for both solids and the liquid being removed.

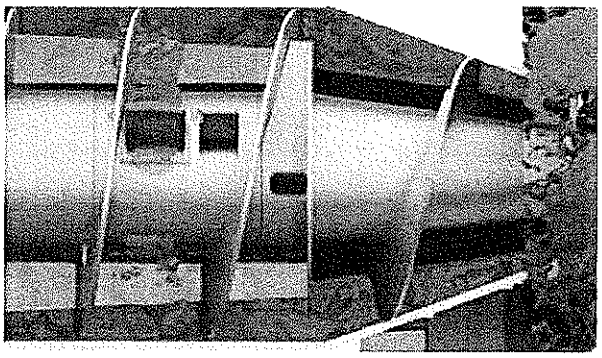
Drive system
In all ALDEC decanter centrifuges, the bowl is driven by an electric motor and a V-belt transmission drive. Power is transferred to the conveyor via a planetary or Direct Drive gearbox. For smaller ALDEC decanters, countershaft transmission is an option.

Operation can either be pre-set to a suitable set of parameters, or the difference between the speeds of the bowl and the conveyor can be controlled automatically, with no need for changing belts or pulleys.

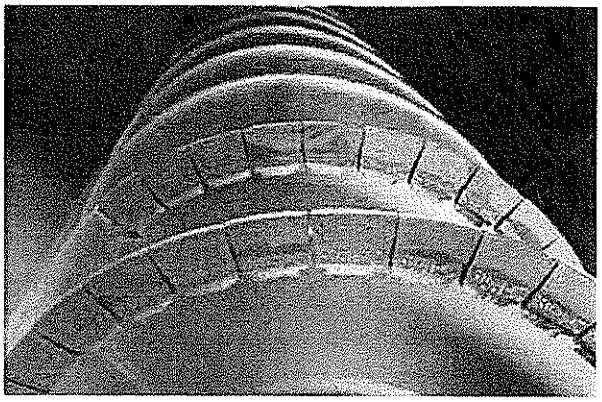
Materials
The bowl, conveyor, inlet tube, outlets, cover and other parts in direct contact with process media are all made of stainless steel. The discharge ports, conveyor flights and feed zone are



360° solids discharge, free from blocking



Baffle disc provides higher capacity and drier solids



Sintered tungsten carbide tiles as wear protection for conveyor flights

3/12/18

Flame sprayed tungsten carbide wear protection on conveyor flights

protected with materials that are highly resistant to erosion. Various types of additional optional wear protection can be added: conveyor flights protection with flame sprayed hard surfacing, and/or sintered tungsten carbide tiles. The frame is made of mild steel with an epoxy enamel finish.

The Basic Core Controller

Each decanter centrifuge in the ALDEC range equipped with a variable frequency drive (VFD) as standard is delivered with the Basic Core Controller (BCC). This control package is capable of fully controlling the decanter operation, ensuring the most efficient performance and keeping costs for installation, commissioning, operation and maintenance to a minimum. The controller is also designed to measure the temperature of the bearings, and to monitor vibration levels.

CERTIFICATE OF APPROVAL

This is to certify that the Management System of:

Alfa Laval (India) Limited
Operations Division
Mumbai - Pune Road, Dapodi,
Pune - 411 012,
INDIA

has been approved by Lloyd's Register Quality Assurance
to the following Management System Standard:

ISO 9001:2015

The Management System is applicable to:

- **The design management, manufacture of centrifugal disc stack separators, decanter centrifuges, centrifugal pumps, fittings, valves, plate type heat exchangers, welded heat exchangers, tubular heat exchangers and air heat exchangers including parts thereof.**
- **The manufacture of process modules comprising above equipment.**
- **The design and manufacture of process equipment, including food and pharma equipment.**

This certificate is valid only in association with the certificate schedule bearing the same number on which the locations applicable to this approval are listed.

Approval
Certificate No: MUM0060171

3112/18

KARKANIAS
ENVIRONMENTAL TECHNOLOGY S.A.

Design

The entire screw conveyor is made of stainless steel grade 304L. It consists of a shaftless spiral surrounded by a trough. Between the spiral and the trough is installed appropriate plastic material (Teflon) in order to eliminate friction. The spiral is protected by covers, attached on the trough by means of fastening screws so it can be easily cleaned and maintained. Suitable number of hoppers is installed in order to receive screenings from coarse screens.

The driving unit is connected at the one end of the screw conveyor through a drive shaft which is equipped with double sealing flange. At the other end the compacting chamber is assembled. Compaction is achieved by the mean of a barrier steel plate. Compression plate works as an obstacle during screenings transfer so they can be compressed and free of condensate before discharge to the skip. Drainage water is drained off into a collecting pipe, which will be driven to the drainage system of the plant.

The screw conveyor can be manufactured in alternative stainless steel grade upon costumer request.

TENDER FORM - TWO STAGE TENDER – SECOND STAGE TENDER

Date: 13/09/2018

Name of Contract: Danilovgrad Municipal Infrastructure - Construction of Wastewater Plant
To: D.O.O. "Vodovod i kanalizacija" Danilovgrad , Caja Scepanovica bb, 81410 Danilovgrad, State of Montenegro

Having examined the tender documents, including Addenda Nos. *(3),* and your requirements incorporated in the Memorandum of the clarification meeting held between us on (19/10/2017) , we, the undersigned, offer to design, manufacture, test, deliver, install, precommission and commission the Facilities under the above-named Contract in full conformity with the said tender documents and the said Memorandum for the sum of:

TWO MILLION THREE HUNDRED NINETY THOUSAND EUROS

(amount of foreign currency in words)

(2.390.000,00€)
(amount in figures)

and

xxxx

KARKANIAS
ENVIRONMENTAL TECHNOLOGY S.A

Until a formal Contract Agreement is prepared and executed between us, this tender, together with your written acceptance thereof and your notification of award, shall constitute a binding contract between us.

We understand that you are not bound to accept the lowest or any tender you may receive.

Dated this 13th day of September year 2018

GEORGIOS KARKANIAS

DIO I.iv

TENDERSKI OBRAZAC – DVOFAZNI TENDER – DRUGA FAZA TENDERA

Datum: 13/09/2018

Naziv ugovora: Opštinska infrastruktura Danilovgrada – Izgradnja uređaja za prečišćavanje otpadnih voda
Za: D.O.O. "Vodovod i kanalizacija" Danilovgrad , Caja Scepanovica bb, 81410 Danilovgrad, Crna Gora

Pregledavši tendersku dokumentaciju, koja uključujući priloge (3), kao i Vaše zahtjeve uključene u Memoranum sastanka koji je održan radi pojašnjenja nedoumica dana (19/10/2017), mi, u daljem tekstu potpisani, nudimo dizajniranje, izgradnju, testiranje, instalaciju, završne radnje i puštanje u pogon Postrojenja koje je predmet u prethodnom tekstu navedenog Ugovora u potpunosti u skladu sa tenderskom dokumentcijom i pomenutim Memorandumom u iznosu od:

DVA MILIJUNA TRISTO DEVEDESET HILJADA EURA
(iznos u stranoj valuti slovima)

(2.390.000,00€)
(brojčani iznos)

i
XXXX

Do pripreme formalnog Ugovora i njegovog potpisivanja, ova ponuda, uz Vaše pisano prihvatanje i obavještenje o dodjeli, predstavlja obavezujući ugovor između nas.

Razumijemo da nijeste u obavezi da prihvatite najnižu ili bilo koju ponudu koju dobijete.

Datum 13. septembar 2018. godine

GEORGIOS KARKANIAS

Attachment 1 to Addendum-3 to the Tender Document for Procurement of: Construction of Wastewater Plant

VOLUME I.viii

PRICE SCHEDULES

PREAMBLE

General

1. The price schedules are divided into separate schedules according to Clause 22.2 of ITT.

2. The Schedules do not generally give a full description of the Plant and Equipment to be supplied and the services to be performed under each item. Tenderers shall be deemed to have read the Technical Specifications and other volumes of the tender documents and to have reviewed the Drawings to ascertain the full scope of the requirements included in each item prior to filling in the rates and prices. The entered rates and prices shall be deemed to include for the full scope as aforesaid, including overheads and profit.

3. If tenderers are unclear or uncertain as to the scope of any item, they shall seek clarification in accordance with the Instructions to Tenderers in the tender documents prior to submitting their tender.

4. The Price Schedules shall be read in conjunction with the several documents forming the Contract including General Conditions of Contract, Conditions of Particular Application, Schedules, Appendices, Drawings, Annexures and Addendums.

5. The rates and prices entered in the priced Price Schedules according to Clause 22.3 of ITT shall, unless expressly stated otherwise in the Contract, include for the comprehensive costs of carryingout
the work in accordance with the requirements of the Contract including without limitation for all Contractor's Equipment, labor, materials, setting-out, trials, obtaining approvals, erection, Temporary Works, work of rectification, supervision, maintenance, insurance, profit, taxes and duties, together with the costs of all risks, liabilities and obligations that are set out in or can reasonably be inferred from the Contract and including the rectification of any defects during the Defect Liability Period.

6. A rate of unit price shall be entered against each item in the Price Schedules, weather quantities are stated or not. The cost of items against which Contractor has failed to enter a rate or price shall be deemed to be covered by other rates and prices entered in the Price Schedules.

7. The whole cost of complying with the previsions of the Contract shall be included in the items provided in the priced Price Schedules and where no items are provided the cost shall be deemed to be distributed among the rates and prices entered for the related items of work. References to the relevant sections of the contract documentation shall be made before entering rates or prices against each item in the Price Schedules.

8. The completed work based on measurement shall be approved in accordance with the following requirements due to actual quantity supplied or work done. The Project Manager shall agree or determine the value of those parts of works, which are to be measured. Measurement shall be made of the net actual quantities of those works notwithstanding local practice.

03/12/18

Wherever any Permanent Works are to measured by records, they shall be prepared by the Contractor. The Contractor shall examine and agree the records with the Project Manager.
Whenever the Project Manager requires any part of the Works to be re-measured, reasonable notice shall be given to the Contractor, who shall:

(i) promptly either attend or send another qualified representative to assist the Project Manager in making measurement, and
(ii) supply any particulars requested by the Engineer.

If the Contractor fails to attend or send a representative, the re-measurement made by (or on behalf of) the Project Manager shall be accepted as accurate.

Pricing

9. Prices shall be entered in indelible ink, and any alterations necessary due to errors etc. shall be initialled by the tenderer.
As specified in the Tender Data, prices shall be fixed and firm for the duration of the Contract, or prices shall be subject to adjustment in accordance Contract Agreement.

10. Tender prices shall be quoted in the manner indicated and in the currencies specified in the Instructions to Tenderers in the tender documents.

For each item, tenderers shall complete each appropriate column in the respective Schedules, giving the price breakdown as indicated in the Schedules.

Prices given in the Schedules for each item shall be for the scope covered by that item as detailed in the Technical Specifications, Drawings or elsewhere in the tender documents.

11. Where there are discrepancies between the total of the amounts in the column for the price breakdown and the amount in the column for the total price, the former shall prevail and the latter will be corrected accordingly.

Where there are discrepancies between the total of the amounts of Schedules 1 to 4 and the amount given in Schedule 5 (Grand Summary), prices will be adjusted in accordance with Paragraph 34. of the Instructions to Tenderers.

Where there are discrepancies between amounts stated in figures and amounts stated in words, the amounts stated in words shall prevail.

12. Payments will be made to the Contractor in the currency or currencies indicated under each respective item.

13. Items left blank will be deemed to have been included in prices for other items. The total for each schedule and the total of the Grand Summary shall be deemed to be the total price for executing the Facilities and sections thereof in complete accordance with the Contract, whether or not each individual item has been priced.

14. When requested by the Employer for the purposes of making payments or part payments, calculating variations or evaluating claims, or for such other purposes as the Employer may reasonably require, the Contractor shall provide the Employer with a breakdown of any composite or lump sum items included in the Schedules.

Prilog 1 dodatku 3 tenderske dokumentacije za nabavku:
Izgradnja postrojenja za otpadne vode

POGLAVLJE I.viii

FINANSIJSKI DIO PONUDE

PREAMBULA

Opšte dispozicije

1. Finansijski dio ponude podijeljen je u zasebne tabele sa cijenama prema članu 22.2 poziva za učešće na tenderu.
2. U tabelama nije dat potpuni opis postrojenja i opreme koju treba isporučiti kao ni usluga koje treba izvršiti u okviru svake stavke. Smatraće se da su ponuđači pročitali tehničke specifikacije i druge djelove tenderske dokumentacije i da su pregledali projekat kako bi utvrdili u potpunosti zahtjeve u okviru svake stavke prije unošenja tarifa i cijena. Podrazumijevaće se da unesene tarife i cijene obuhvataju u potpunosti sve troškove, kao što je gore navedeno, uključujući režijske troškove i dobit.
3. Ako je ponuđačima nejasno koji opseg obuhvata svaka stavka, treba da potraže pojašnjenje prije podnošenja ponude u skladu sa Uputstvom ponuđača u tenderskoj dokumentaciji.
4. Finansijski dio ponude treba pročitati zajedno sa nekoliko dokumenata koji sačinjavaju ugovor, uključujući opšte uslove ugovora, posebne uslove, tabele, priloge, nacrte, anekse i dodatke.
5. Tarife i cijene unijete u finansijski dio ponude prema članu 22.3 poziva za učešće na tenderu, ukoliko nije drugačije naznačeno u ugovoru, treba da obuhvataju ukupne troškove izvršenja radova u skladu sa zahtjevima ugovora, uključujući bez ograničenja svu opremu izvođača radova, radnu snagu, materijal, projektovanje, testiranje, dobijanje saglasnosti, izgradnju, privremene radove, popravke, nadzor, održavanje, osiguranje, profit, poreze i obaveze, zajedno sa troškovima svih rizika, odgovornosti i obaveza koje su utvrđene ili mogu biti zaključene iz ugovora i uključujući ispravke bilo kakvih nedostataka tokom perioda odgovornosti za nedostatke.
6. Iznos jedinične cijene se unosi za svaku stavku u finansijskom dijelu ponude, bilo da su količine navedene ili ne. Troškovi stavki za koje izvođač nije unio tarifu ili cijenu smatraće se pokrivenim drugim tarifama i cijenama unesenim u finansijski dio ponude.
7. Ukupni troškovi usklađivanja sa odredbama ugovora treba da budu uključeni u stavke predviđene finansijskim dijelom ponude, a ukoliko one nisu navedene, trošak će se smatrati raspoređenim u okviru tarifa i cijena unesenih za slične stavke. Prije unosa tarifa ili cijena za svaku stavku u finansijskom dijelu ponude biće konsultovani odgovarajući odjeljci ugovorne dokumentacije.
8. Završeni radovi podložni mjerenju biće potvrđeni u skladu sa sljedećim zahtjevima zbog provjere isporučene količine ili obavljenog rada. Rukovodilac projekta će prihvatiti ili utvrditi vrijednost onih djelova radova koje treba izmjeriti. Potrebno je izmjeriti neto stvarnu količinu tih radova bez obzira na lokalnu praksu.
Ako su trajni radovi podložni mjerenju, evidenciju priprema izvođač. Izvođač radova ispituje i usklađuje evidenciju sa rukovodiocem projekta. Ukoliko rukovodilac projekta zahtijeva ponovno

03/12/18

mjerenje u bilo kom dijelu radova, potrebno je blagovremeno obavijestiti izvođača koji je dužan da:

(i) odmah dođe ili pošalje drugog kvalifikovanog predstavnika da asisitira rukovodiocu projekta u mjerenju, i
(ii) dostavi sve podatke koje zahtijeva inženjer.

Ukoliko izvođač radova nije prisutan ili ne pošalje svog predstavnika, ponovljeno mjerenje koje je izvršio rukovodilac projekta (ili je izvršilo drugo lice u njegovo ime) biće prihvaćeno kao validno.

Cijene

9. Cijene se unose neizbrisivim mastilom, a sve izmjene koje treba izvršiti zbog nastalih grešaka itd., moraju biti parafirane od strane ponuđača.
Kao što se navodi u tenderskim podacima, cijene će biti fiksne i nepromjenljive za vrijeme trajanja Ugovora, ili će biti regulisane u skladu sa Ugovornim sporazumom.

10. Cijene tendera će biti navedene na preciziran način u valutama navedenim u Uputstvu ponuđačima u okviru tenderske dokumentacije.
Za svaku stavku, ponuđači treba da popune odgovarujće kolone u tabelama, navodeći cijene kako je naznačeno u finansijskom dijelu ponude.
Cijene date u tabelama za svaku stavku pojedinačno treba da pokrivaju u potpunosti troškove navedenih stavki, kako je detaljno precizirano u tehničkim specifikacijama, crtežima ili na drugim mjestima u tenderskoj dokumentaciji.

11. Ako postoje razlike između zbira cijena po stavkama i iznosa u koloni za ukupnu cijenu, prvi će prevladati, a drugi će biti ispravljen u skladu sa njim.

Ako postoje razlike između ukupnih iznosa Tabela od 1 do 4 i iznosa datog u Tabeli 5 (Konačan zbir), cijene će biti prilagođene u skladu sa odjeljkom 34 Uputstva za ponuđače.
Tamo gdje postoje odstupanja između iznosa navedenih ciframa i iznosa navedenih riječima, iznosi navedeni riječima su validni.

12. Plaćanja će biti izvršena izvođaču u valuti ili valutama navedenim u okviru svake odgovarajuće stavke.

13. Stavke koje su nepopunjene smatraće se uračunatim u cijene ostalih stavki. Ukupan iznos za svaku tabelu i konačan zbir smatraće se ukupnom cijenom za izgradnju postrojenja i njihovih djelova u potpunoj saglasnosti sa Ugovorom, bez obzira na to da li je svaka stavka određena cijenom ili ne.

14. Na zahtjev poslodavca u svrhu izvršavanja uplate ili djelimičnih uplata, izračunavanja varijacija ili procjene potraživanja, ili u druge svrhe koje poslodavac može opravdano zahtijevati, izvođač treba da dostavi poslodavcu listu paušalnih cijena za stavke obuhvaćene finansijskim dijelom ponude.

Important note:

In accordance with Preamble in the main folder (Volume I.vii – Price Schedules – Preamble) - unless implied otherwise from the description of items in the Price Schedules No. 1 to No. 5, the unit prices shall include costs of the following:

1 Establishment, maintenance, and winding-up of the storehouses, offices, and other facilities of the Contractor (including electricity fees, water and sewage charges, fees for printing, copying and consumable supplies, and telecommunication fees);
2 Detailed setting-out of the Work performed by the Contractor;
3 Setting-out of all utility services (incl. their connections, electricity, control and signal cables, grounding, and anticorrosion protection elements) by their operators and provision of necessary permits and approvals prior to the work commencement, including fees;
4 Technical survey of existing structures;
5 Geological survey;
6 Geodetic measurements;
7 Archaeological survey for the purpose of preservation of archaeological findings and sites assumed to be discovered within the construction site in question;
8 Traffic organisation project and its approval, including fees. Installation of temporary and restoration of permanent traffic signs, incl. relevant fees;
9 Construction flood protection plan, Emergency plan for leakage of substances hazardous for water, Work safety and health protection plan, Inspection and test plan, Plan of environmental protection for the construction duration, inc. negotiations and approvals;
10 Construction site plan documents, incl. negotiations with the operators of utility lines and equipment concerned, negotiations with the owners of estates concerned and conclusions of relevant contracts;
11 Provision of all necessary permits and opinions prior to the commencement of works and during the construction, incl. fees;
12 Purchase/procurement of all materials, accessories and auxiliary construction materials, regardless of the fact whether they are included in Schedules;
13 All measures taken in connection with excavation works (sheeting, sloping, groundwater pumping, monitoring bores, technical equipment maintenance, etc.) resulting from the engineering-geological and hydro-geological surveys performed;
14 Vertical and horizontal transfer of any materials and plant and equipment in any quantities (materials for incorporation of products, excavated soil, removed foundation and surface layers of hard-surface/unpaved roads and pavements, water pumped from trenches and foundation pits, etc.) within and outside the Site, incl. fees;
15 Loading/unloading and transport of demolished materials, debris to a landfill at any distance, incl. landfill fees;
16 Loading/unloading and transport of excessive soil to a landfill at any distance, incl. landfill fees;
17 Clearing rooms and debris removal during demolishing as well as construction works;
18 Pumping and clearing of spaces and removal of waste to a landfill at any distance, incl. landfill fees;
19 Transfer of materials to/from temporary dumping sites, incl. loading, unloading, and fees, and including establishment and maintenance of temporary dumping sites and restoring the temporary dumping sites to their original state (confirmed by the owner(s) of estates concerned);
20 Preparatory and finishing bricklaying works and other preparatory and auxiliary construction works related to the assembly of sanitary installation, air-conditioning system, construction wiring, technological equipment, fitting windows, doors and frames, etc.;
21 Delivery and assembly of all connections of piping of all materials (reducers, flanges, sleeves, etc.), delivery and assembly of connections of all piping lines (welds, sockets, couplers, flanges, etc.), incl. branches; watertight piping passages through walls of manholes, tanks, and chambers (manhole sockets, etc.). Piping connection at the border of the construction and technological deliveries.
22 Compacting of all piping and cabling beds, backfills, fills, and mounds – in 0.2-0.3m layers;

03/12/18

23 Auxiliary assembly materials (tubes, cable eyes, wall plugs, fasteners, marking material, warning signs, cable strips, cable bushings, etc.;
24 All auxiliary works such as construction of scaffoldings, supports, dykes, sheeting of foundation pits and trenches incl. the use of Larsen sheet piles, and their removal;
25 Installation of all products and equipment, accessories and auxiliary construction materials and works;
26 Loss money;
27 Temporary piping and cable connections, passages, bypasses, and pumping for the provision of the sewerage system operation during the construction and gradual putting new structures into operation, incl. preparatory works, provision of reserve power supply and its operation;
28 Furnishing, securing, lighting, and heating of workplaces, machinery, auxiliary equipment, mechanisation, scaffoldings, storage areas and spaces, and work huts of the Contractor;
29 Partial closure and use of public communications if necessary for the work execution, incl. fees;
30 Protection of adjoining or surrounding plots against contamination or damages, removal of contamination and damages;
31 Cleaning of roads as required by valid regulations, incl. waste disposal;
32 Installation and removal of any casing used for concreting, incl. casing material supply, reinforcement in reinforced-concrete structures acc. to structural analyses and bending schedules of the Contractor;
33 Delivery, assembly, and disassembly of all parts of the temporary Work;
34 Delivery and assembly of all parts of the permanent Work, incl. connection, testing, and activation of technological equipment;
35 Establishment of temporary access roads, diversions, temporary road widening, bridging of trenches;
36 Temporary diversion of water courses incl. installation and removal of temporary dykes made of any material and piping used for this purpose;
37 Pumping of groundwater from trenches and foundation pits during the construction, incl. temporary piping and cabling connections, passages, bypasses (building, usage and removal), incl. preparatory works, provision of reserve power supply and its operation, obtaining permission and fees for discharging and possible treatment as specified by valid legislation, and incl. provision of reserve power supply and its operation;
38 Protective measures for the work executed and equipment delivered until their acceptance by the Employer;
39 Completion of the civil and building works and technological works (plant) incl. revisions, connection and activation, control measurements and adjustment of equipment, heating tests, etc.;
40 Obtaining approvals of concerned authorities and state organisations required for putting the Work into operation;
41 Elaboration of an individual (pre-commissioning) and complex (commissioning) test schedule and execution of all tests, monitoring, inspections, certificates, and revisions, incl. provision of media, connection, bleeding, filling the piping, etc., incl. preparatory works;
42 Removal of construction material from the structures built, and piping flushing and disinfection if required;
43 Works performed as resulting from the requirements of organisations and state authorities concerned;
44 General risks such as aggravated excavation conditions, adhesiveness, aggravated transport conditions, local influences, operational influences, necessary additional surveys (if executed);
45 All labour costs, taxes, Contractor's supervision, benefits, non-residence allowances, travel allowances, and expenditures;
46 Provision of compliance with requirements related to the occupational safety and health protection (poling boxes, planks, laths, ladders, securing trenches, protective gloves, helmets, footwear, etc.);
47 Elaboration and Provision of compliance with requirements related to the environmental protection and waste disposal including communication cleaning;

03/12/18

48 Provision of compliance with requirements of the quality management system;
49 Provision of compliance with requirements of road and traffic authorities (purchase/leasing, installation, and maintenance of traffic signs, railings, lighting of trenches, restoration of permanent traffic signs, etc.), incl. traffic organisation project and its approval, incl., fees;
50 All basic and secondary costs or overhead costs necessary for perfect and complex execution of works;
51 All secondary or overhead costs necessary for perfect and complex execution of works;
52 All Temporary Works not specified in the Schedules (e.g. temporary diversions, bridging trenches with light or heavy structures, repair of local communications, bridges, country lanes, and estates damaged by construction activities, re-laying bus stops, temporary access roads, etc.);
53 Loading/unloading, transport and disposal of waste, incl. all fees;
54 Expenses resulting from compensation agreements submitted by the Employer;
55 Elaboration of a plan of individual and complex tests;
56 Elaboration of a plan of training and a schedule of the beginning of activities into trial operation;
57 Training of personnel;
58 Passport of existing access roads which could be damaged or affected by the work activities of the Contractor during the construction;
59 Basic Design and Detail Design within the scope specified in Volume II.ii, incl. complete engineering activities and procurement of all necessary permits;
60 Production (works) documentation, incl. provision of necessary approvals and opinions of organisations and state authorities concerned;
61 As-built Documents including laying-out and geodetic plans for the purpose of inclusion into the cadastre within the scope specified in Volume II.ii;
62 Operation manuals during the construction, for early use of construction parts and for trial and permanent operation;
63 Elaboration of methodical instructions for the trial operation control and methodical management and evaluation of trial operation.

Items will be completed in accordance with specific design of the Contractor.

03/12/18

03/12/18

Važna napomena: U skladu sa Preambulom (Poglavlje I.vii – Finansijski dio ponude - Preambula), osim ako nije drugačije naznačeno u opisu stavki u tabelama od broja 1 - 5, jedinične cijene uključuju troškove sljedećih elemenata:

1. Otvaranje, održavanje i likvidacija skladišta, kancelarija i drugih objekata izvođača radova (uključujući troškove za električnu energiju, vodu i kanalizaciju, za štampanje, kopiranje i potrošni materijal, kao i za telekomunikacione usluge);
2. Detaljno planiranje radova koje obavlja izvođač;
3. Uspostavljanje svih komunalnih usluga (uključujući priključke, struju, kontrolne i signalne kablove, uzemljenje i antikorozivne zaštitne elemente) od strane operatera i obezbjeđivanje neophodnih dozvola i odobrenja prije početka rada, uključujući naknade;
4. Tehnički pregled postojećih struktura;
5. Geološka istraživanja;
6. Geodetska merenja;
7. Arheološka istraživanja u cilju očuvanja arheoloških nalazišta i lokacija za koje se pretpostavlja da će biti otkrivene na predmetnom gradilištu;
8. Plan organizacije saobraćaja i njegovo odobrenje, uključujući naknade. Ugradnja privremenih i restauracija trajnih saobraćajnih znakova, uklj. odgovarajuće naknade;
9. Plan za zaštitu od poplava, plan hitnog reagovanja u slučaju curenja materija štetnih za vodu, plan zaštite na radu i zaštite zdravlja, plan nadzora i testiranja, plan zaštite životne sredine u toku trajanja izgradnje, uklj. pregovore i saglasnosti;
10. Planska dokumentacija gradilišta, uklj. pregovore sa operaterima zaduženim za komunalne usluge i opremu, pregovore sa vlasnicima dotičnih imanja i zaključivanje relevantnih ugovora;
11. Obezbjeđivanje svih potrebnih dozvola i mišljenja prije početka radova i tokom izgradnje, uklj. naknade;
12. Kupovina/nabavka svih materijala, dodatne opreme i pomoćnog građevinskog materijala, bez obzira na to da li su uključeni u finansijski dio ponude;
13. Sve mjere koje se preduzimaju u vezi sa radovima na iskopavanju (oblaganje, izrada kosina, ispumpavanje podzemne vode, bušotina za monitoring, održavanje tehničke opreme itd.) koje proizilaze iz inženjersko-geoloških i hidrogeoloških ispitivanja;
14. Vertikalni i horizontalni prenos materijala, postrojenja i opreme u bilo kojoj količini (materijali za ugradnju proizvoda, iskopano zemljište, uklonjeni temelj i površinski slojevi čvrstih/neasfaltiranih puteva i trotoara, voda ispumpana iz rovova i temeljnih jama itd.) u okviru i van lokacije, uklj. naknade;
15. Utovar/istovar i transport porušenog materijala i otpada na deponiju na bilo kojoj udaljenosti, uklj. naknade za deponije;
16. Utovar/istovar i transport suvišnog zemljišta na deponiju na bilo kojoj udaljenosti, uklj. naknade za deponije;
17. Raščišćavanje prostorija i uklanjanje otpada tokom rušenja, kao i građevinski radovi;
18. Isušivanje i čišćenje prostora i uklanjanje otpada na deponiju na bilo kojoj udaljenosti, uklj. naknade za deponije;
19. Prenos materijala na/sa privremene lokacije za odlaganje otpada, uklj. utovar, istovar, naknade, kao i određivanje i održavanje privremenih lokacija za odlaganje otpada i vraćanje privremenih lokacija za odlaganje otpada u njihovo prvobitno stanje (potvrđeno od strane vlasnika imanja o kom se radi);

03/12/18

20. Pripremni i završni zidarski radovi i ostali pripremni i pomoćni građevinski radovi vezani za postavljanje sanitarnih instalacija, klima uređaja, građevinskih instalacija, tehnološke opreme, prozora, vrata i okvira itd.
21. Isporuka i montaža svih priključaka za cijevi svih materijala (reduktori, prirubnice, rukavi, itd.), isporuka i povezivanje cjevovoda (zavarivanje, priključci, spojnice, prirubnice, itd.), uklj. ogranke; vodonepropusne spojnice kroz zidove šahtova, rezervoara i šupljina (priključak za šahtu, itd.). Povezivanje cijevi sa instalacijama na obodu gradilišta i isporuka tehnoloških sredstava.
22. Nabijanje posteljica svih cijevi i kablova, zatrpavanje, popunjavanje i nasipanje - u slojevima od 0,2 - 0,3 m;
23. Pomoćni materijali za montažu (cijevi, kablovske stopice, tipla, šrafovi, materijal za označavanje, znaci upozorenja, kablovske vezice, kablovski prstenovi itd.)
24. Svi pomoćni radovi kao što su izgradnja skela, podupirača, nasipa, oblaganje temeljnih jama i rovova uklj. korišćenje Larsenovih šipova i njihovo uklanjanje;
25. Ugradnja svih proizvoda i opreme, dodatna oprema i pomoćni građevinski materijali i izvođenje radova;
26. Gubitak novca;
27. Privremeni cjevovodi i kablovski priključci, prolazi, skretnice i pumpa za obezbjeđivanje rada kanalizacionog sistema tokom izgradnje i postepeno puštanje novih objekata u rad, uklj. pripremne radove, obezbjeđivanje rezervnog snabdijevanja električnom energijom i njegovo funkcionisanje;
28. Opremanje, obezbjeđenje, osvjetljenje i zagrijavanje radnih mjesta, mašina, pomoćne opreme, mehanizacije, skela, skladišnih površina i prostora i montažnih kućica izvođača radova;
29. Djelimično zatvaranje i korišćenje javnih komunikacija ukoliko je potrebno za izvođenje radova, uklj. naknade;
30. Zaštita susjednih ili okolnih parcela od zagađenja ili oštećenja, uklanjanje zagađenja i oštećenja;
31. Čišćenje puteva prema važećim propisima, uklj. odlaganje otpada;
32. Ugradnja i uklanjanje kućišta za ugradnju u beton, uklj. nabavku kućišta, armiranje u armiranobetonskim konstrukcijama prema strukturnoj analizi i proračunu karakteristika čelika koji uradi izvođač;
33. Isporuka, montaža i demontaža svih djelova privremenih radova;
34. Isporuka i montaža svih djelova trajnih radova, uklj. povezivanje, ispitivanje i aktiviranje tehnološke opreme;
35. Uspostavljanje privremenih pristupnih puteva, preusmjeravanje, privremeno širenje puta, premošćavanje rovova;
36. Privremeno preusmjeravanje vodotoka uključujući ugradnju i uklanjanje privremenih nasipa napravljenih od bilo kog materijala i cijevi korištenih u tu svrhu;
37. Pumpanje podzemnih voda iz rovova i temeljnih jama tokom izgradnje, uklj. privremene cjevovode i kablovske priključke, prolaze, skretnice (izgradnja, upotreba i uklanjanje), uklj. pripremne radove, obezbjeđivanje rezervnog snabdijevanja električnom energijom i njegovo funkcionisanje, dobijanje dozvole i naknade za odvođenje i eventualno prečišćavanje prema važećem zakonodavstvu, uklj. obezbjeđivanje rezervnog napajanja električnom energijom i njegovo funkcionisanje;
38. Zaštitne mjere za izvršeni rad i isporučenu opremu do njihovog prihvatanja od strane poslodavca;

03/12/18

39. Završetak građevinskih i tehnoloških radova (postrojenja) uklj. revizije, povezivanje i aktiviranje, kontrolna mjerenja i podešavanje opreme, ispitivanja grijanja itd .;
40. Pribavljanje saglasnosti odgovarajućih organa i državnih organizacija potrebnih za izvođenje radova;
41. Izrada pojedinačnog (prije puštanja u rad) i složenog (prilikom puštanja u rad) redosljeda ispitivanja i izvršenje svih ispitivanja, praćenje, nadzor, sertifikati i revizija, uklj. obezbjeđivanje medija, priključivanje, ispuštanje, punjenje cijevi itd., uklj. pripremne radove;
42. Uklanjanje građevinskog materijala iz izgrađenih objekata i ispiranje i dezinfekcija cijevi, ako je potrebno;
43. Radovi izvršeni kao rezultat zahtjeva organizacija i odgovarajućih državnih organa;
44. Opšti rizici, kao što su otežani uslovi iskopavanja, adhezivnost, otežani uslovi prevoza, lokalni uticaji, operativni uticaji, neophodna dodatna istraživanja (ako se izvrše);
45. Svi troškovi rada, porezi, nadzor izvođača, benefiti, naknade nerezidentima, troškovi prevoza i rashodi;
46. Obezbjeđivanje usaglašenosti sa zahtjevima vezanim za zaštitu na radu i zdravstvenu zaštitu (kutije, daske, letve, merdevine, zaštitni rovovi, zaštitne rukavice, kacige, obuća itd.);
47. Izrada i obezbjeđivanje usaglašenosti sa zahtjevima vezanim za zaštitu životne sredine i odlaganje otpada uključujući čišćenje pristupnih puteva;
48. Obezbjeđivanje usaglašenosti sa zahtjevima sistema upravljanja kvalitetom;
49. Obezbjeđivanje usaglašenosti sa zahtjevima nadležnih organa za puteve i saobraćaj (kupovina/zakup, ugradnja i održavanje saobraćajnih znakova, ograde, osvjetljenje rovova, obnavljanje trajnih saobraćajnih znakova itd.), uklj. projekat organizacije saobraćaja i njegovo usvajanje, uklj. naknade;
50. Svi osnovni i sekundarni troškovi ili režijski troškovi neophodni za savršeno i složeno izvođenje radova;
51. Svi sekundarni ili režijski troškovi neophodni za savršeno i složeno izvođenje radova;
52. Svi privremeni radovi koji nisu navedeni u tabelama (npr. privremena preusmjeravanja, premošćivanje rovova lakim ili teškim strukturama, popravka lokalnih puteva, mostova, seoskih puteva i imanja oštećenih građevinskim aktivnostima, premještanje autobuskih stajališta, privremenih pristupnih puteva itd. .);
53. Utovar/istovar, transport i odlaganje otpada, uklj. sve troškove;
54. Troškovi koji proizlaze iz ugovora o kompenzaciji koje podnosi poslodavac;
55. Izrada plana individualnih i složenih testova;
56. Izrada plana obuke i rasporeda početka aktivnosti u okviru probnog rada;
57. Obuka osoblja;
58. Dozvola za postojeće pristupne puteve koji mogu biti oštećeni ili pogođeni radnim aktivnostima izvođača tokom izgradnje;
59. Osnovni dizajn i detaljni dizajn u opsegu navedenom u poglavlju II.ii, uklj. sve građevinske aktivnosti i nabavku svih potrebnih dozvola;
60. Proizvodna (radna) dokumentacija, uklj. obezbjeđivanje potrebnih saglasnosti i mišljenja organizacija i odgovarajućih nadležnih organa;
61. Dokumentacija izvedenog stanja uključujući detaljne geodetske planove u svrhu upisivanje u katastar u opsegu utvrđenom u poglavlju II.ii;

NUMBER 290

POWER OF ATTORNEY

In the town of Larissa, today on the fifth (5) of the month of September of the year two thousand eighteen(2018), day of Wednesday, at my office of the building, located on the third floor of 4 Kouma str., before me the Notary of Larissa **AIKATERINI VASILEIOU**, daughter of Dimitrios and Valentini, having as my seat and residence Larissa, with TIN 047010021 belonging of the P.F.S. af Larissa, appeared the below mentioned, non exempted by the law, **Vasiliki Karkania, of Apostolos and Stamatia**, with T.I.N. 128996162, P.F.S. A' of LARISSA, chemical engineer, born in Larissa on 15-3-1985, where she resides on 3 Farmaki str., holder of the Police Identity Card no. AK 407175/11-11-2011 by the S.S. Of Larissa, who acts in the present as managing director and representative of the anonymous society denominated: "KARKANIAS ENVIRONMENTAL TECHNOLOGY S.A." and with the distinctive title: "KARKANIAS" having its seat in the IND. AR. Of LARISSA with T.I.N. 095244711, P.F.S. B' of Larissa, with GEMI number: 026564640000. This company was incorporated with the contract no. 21.180 / 10-04-2001 of the notary of Larissa Eleni - Evgenia Romosiou - Kleitsaki,

03/12/18

03/12/18

recorded in the Registry of Anonymous Societies on 12-04-2001, with number 48779/31/B/01/12, approved and the license number K 1009/12-4-2001 was administered by the Prefect of Larissa, the summary of its memorandum, the registration of the approval and the license were published in the G.G. Number 2.393/30-04-2001 (Issue S.A. And L.L.C.), copies of which are attached in my present act. After successive modifications of the above memorandum, as in force coded, it has been registered in the company's share in GEMI, a copy of which with protocol number: 350511.495898, is attached to my present act. The last Board of Directors, managing the above company, was elected with five year tenure, ending on 13-12-2016, from the General Assembly of its shareholders from 14-12-2016 and was constituted with the minutes of the Board of Directors from 14-12-2016, the relevant minutes were registered in the competent G.E.MI. Service with code number 861643, as it results from the notification with prot. No. 727949/20-12-2016 of the above service, which is attached in the present, and until today it has not been further modified, or has been dissolved, or placed in bankruptcy or liquidation, as responsibly declared by the above representative of the company. The person appearing here, was authorized by the Board of Directors of the above company for signing the present with the minutes of the Board of Directors no. 1068/04-09-2018, a copy of which is attached in the present. The person appearing here asked me to compile this act, with which she declared that the company she represents, namely the anonymous society having its seat in the Municipality of Tempi (IN. AR. of LARISSA) anonymous society with the denomination "KARKANIAS ENVIRONMENTAL TECHNOLOGCY S.A." in order to participate in the tender for the assumption of the

work with full title: Danilovgrad Municipal Infrastructure – construction of wastewater plant, Tender No: EBRD ME DAN 9000, on the state of Montenegro(Danilovgrad Municipal Infrastructure – construction of wastewater plant, Tender No: EBRD ME DAN 9000), which takes place in Caja Scepanovica bb Danilovgrad 81410 State of Montenegro, on September 13 2018 or at any other date after postponement, designates and reinstates its special attorney, representative and process agent: 1) Georgios Karkanias of Apostolos and Stamatia, born on 03-08-1983 in Larissa - Greece, where he resides on 3 Farmaki str., holder of the Hellenic Republic Passport no. AK5153599, and 2) Aristeidis Oikonomou of Dimitrios and Panagiota, born on 22-09-1969 on Larissa - Greece, where he resides at Terpsithea Larissa, holder of the Passport No. C5HTVTZHF/09-06-2009 of the Republic of Germany and 3) Vasileios Margaritis of Alexandros and Pinelopi, born on 14-06-1985 in Larissa - Greece, where he resides on 8 Aristeidou str., holder of the Hellenic Republic Passport no. AK4571542, **to whom it gives the special order and power of attorney, acting jointly or separately, in its place, in its name (the company "KARKANIAS ENVIRONMENTAL TECHNOLOGY S.A.") and on its behalf**, to submit the file of the tender, before the tender Committee for the undertaking of the above work. Furthermore to authorize them to sign and submit any relative document during the whole tender. The above representative of the company "KARKANIAS ENVIRONMENTAL TECHNOLOGY S.A.", with the capacity she appears in the present act, she also declared responsibly and according to the provisions of the L. 1599/1986 that the residence declared and mentioned in the beginning of the present and the company's seat

03/12/18

03/12/18

represented is the real, legal and true, and the company has not been dissolved or placed under bankruptcy or liquidation. The person who appeared, with her capacity in the present, declares that she approves and recognizes from now, all the actions of the above representatives, which refer to the above orders, as legal, valid, strong and unassailable and legally binding the company represented by them and that this power of attorney is valid until revoked and its revocation is legally notified.

In witness whereof this power of attorney was compiled, in two (2) leaves. A megarosimo stamp (1,00) euro was affixed in the original and (2,00) euros for the copy. For the rights of the present, as well for the rights of issuing one copy, (36,00) euros were collected. On the collected rights, VAT was collected, euros (8,64). I read this power of attorney loudly for the representative of the principal to hear it, who certified its whole content and singed it, as well as myself the notary, as provided by the law.

KOPIJA

BROJ 290

PUNOMOĆJE

U gradu Larisa, u srijedu 5. septembra 2018. godine, u mojoj kancelariji smještenoj u zgradi na trećem spratu ulice Kouma, kod mene, notarke u Larisi **AIKATERINI VASILEIOU**, kćerke Dimitriosa i Valentini, sa rezidencijom u Larisi, PIB 047010021 područna jedinica Larisa, pojavila se dolje pomenuta, poreska obveznica, **Vasiliki Karkania, od Apostolosa i Stamatije**, PIB 128996162, područna jedinica Larisa, inženjerka hemije, rođena u Larisi 15.3.1985, gdje boravi u Ulici Farmaka br. 3, sa ličnom kartom br. AK407175/11-11-2011 izdatom u Larisi, koja je trenutno direktorica i predstavnica anonimnog društva pod nazivom „KARKANIAS ENVIRONMENTAL TECHNOLOGY S.A.“, poznatog kao „KARKANIAS“, sa sjedištem u industrijskoj zoni Larise, PIB 095244711, područna jedinica Larisa, sa CRPS brojem: 026564640000. Ova kompanija je osnovana ugovorom br. 21.180/10-04-2001 notarke Larise Eleni – Evgenia Romosiou – Kleitsaki, ubilježena je u Registar anonimnih društava 21.4.2001, pod brojem 48779/31/B/01/12, odobrena licencom broj K 1009/12-4-2001 pod upravom prefekta Larise, dok su sažetak memoranduma, registracija odobrenja i licenca objavljeni u Sl. listu broj 2.393/30-04-2001 (poglavlje: AD i DOO), čije kopije su u prilogu ovog akta. Nakon što su izvršene izmjene gore pomenutog memoranduma, na osnovu propisa koji su na snazi, zavedene su u Registar privrednih subjekata, čija kopija sa brojem protokola 350511.495898 je data u prilogu ovog akta. Posljednji Upravni odbor, koji upravlja gore pomenutom kompanijom, izabran je sa petogodišnjim mandatom, a izabrala ga je Generalna skupština akcionara od 14.12.2016. i konstituisan je uz zapisnik Upravnog odbora od 14.12.2016, a zapisnik je zaveden u CRPS servis centar pod šifrom 861643, kao što potvrđuje objava sa br. prot. 727949/20-12-2016 pomenutog servisnog centra, što je u prilogu ovog akta, i do danas nije dalje mijenjan, niti raspušten, ili stavljen pod stečaj ili likvidaciju, kao što odgovorno izjavljuje gore imenovana predstavnica kompanije. Osoba koja se ovdje pojavljuje, ovlašćena je od strane Upravnog odbora gore pomenute kompanije da potpiše ovaj akt uz zapisnik Upravnog odbora br. 1068/04-09-2018, čija je kopija u prilogu ovog akta. Osoba koja se ovdje pominje me zamolila da sačinim ovaj akt, u kom izjavljuje da je kompanija koju predstavlja, odnosno anonimno društvo sa sjedištem u opštini Tempi (industrijska zona Larise), anonimno društvo pod imenom „KARKANIAS ENVIRONMENTAL TECHNOLOGY S.A.“, da bi učestvovala na tenderu za dobijanje posla pod punim nazivom: Danilovgradska opštinska infrastruktura – izgradnja postrojenja za otpadne vode, tenderski broj EBRD ME DAN 9000, u Crnoj Gori (Danilovgradska opštinska infrastruktura – izgradnja postrojenja za otpadne vode, tenederski broj EBRD ME DAN

03/12/18

9000), koji se odvija u ulici Čaja Šćepanovića bb Danilovgrad, 81410, Crna Gora, 13. septembra 2018. ili bilo kog drugog datuma u slučaju odlaganja, i imenuje i postavlja svog specijalnog pravnog zastupnika, predstavnika i zajmoprimca: 1) Georgios Karkanias od Apostola i Stamatije, rođen 3.8.1983. u Larisi, Grčka, gdje boravi u ulici Farmaki, vlasnik pasoša Republike Grčke br. AK5153599, i 2) Aristeidis Oikonomou od Dimitriosa i Panagiote, rođen 22.9. 1969. u Larisi – Grčka, gdje boravi u Tersiptea Larisi, vlasnik pasoša br. C5HTVTZHF/09-06-2009 Republike Njemačke, i 3) Vasileios Margaritis od Aleksandrosa i Pinelopi, rođen 14.6.1985. u Larisi – Grčka, gdje boravi u ulici Aristeidou, vlasnik pasoša Republike Grčke br. AK4571542, **kojima se daje poseban nalog i punomoćje, bilo da rade zajedno ili odvojeno, u njeno ime (kompanija „KARKANIAS ENVIRONMENTAL TECHNOLOGY S.A.") i za njen račun** da predaju tendersku dokumentaciju, pred tenderskom komisijom za obavljanje gore navedenog posla i daje im ovlašćenje da potpišu i predaju svaki odgovarajući dokument tokom cijelog tenderskog procesa. Gore pomenuta predstavnica kompanije „KARKANIAS ENVIRONMENTAL TECHNOLOGY S.A.", u funkciji navedenoj u ovom aktu, takođe odgovorno izjavljuje da su, prema odredbama zakona 1599/1986, rezidencija navedena na početku ovog akta i navedeno sjedište kompanije stvarni, legalni i autentični, i da kompanija nije raspuštena, niti stavljena pod stečaj ili likvidaciju. Osoba koja se pojavila, u funkciji navedenoj u ovom aktu, izjavljuje da od sada odobrava i priznaje sve radnje gore navedenih predstavnika, koje se odnose na gore navedena zaduženja, kao legalne, valjane, snažne i neosporne i pravno obavezujuće za kompaniju koju predstavljajuju i da je ovo punomoćje validno dok se ne oduzme i dok njegovo oduzimanje ne bude zakonski objavljeno.
Ovo punomoćje sastavljeno je u dva primjerka u prisustvu svjedoka. Stavljen je „megarosimo" pečat za original po cijeni od 1 eura, a 2 eura za kopiju. Za prava ovog akta, kao i za prava traženja kopije, sakupljeno je 36 eura, od čega PDV od 8,64 eura. Pročitala sam ovo punomoćje glasno pred predstavnicom direktora, koja je odobrila njegov sadržaj i potpisala ga, kao i ja u ulozi notarke, kako je predviđeno zakonom.

ΕΓΓΥΗΤΙΚΗ ΕΠΙΣΤΟΛΗ
LETTER OF GUARANTEE

PIRAEUS BANK S.A.
AGIOU GEORGIOU BRANCH, LARISSA (2614)

DATE: 28/08/2018

To:
D.O.O. 'VODOVOD I KANALIZACIJA' DANILOVGRAD
CAJA SCEPANOVICA BB
81 410 DANILOVGRAD
STATE OF MONTENEGRO

Guarantee No. 917ILG1854141 for EUR 30.000,00 (EURO THIRTY THOUSAND ONLY)

Name of Contract: Danilovgrad Municipal Infrastructure - Construction of Wastewater Plan

WHEREAS, KARKANIAS ENVIRONMENTAL TECHNOLOGY S.A., VAT No. EL095244711, Industrial Area of Larissa, Greece, P.C. 41004, (hereinafter called "the tenderer") has submitted its Tender dated 13/09/2018 (date of tender) for the performance of the above-named Contract (hereinafter called "the Tender"), with No. EBRD ME DAN 9000 issued on 15/06/2017.

KNOW ALL PERSONS by these presents that WE PIRAEUS BANK S.A., AGIOU GEORGIOU BRANCH, LARISSA (2614), 1ST KM OLD NATIONAL ROAD LARISSA - ATHENS, 41335 LARISSA, GREECE, (hereinafter called "the Bank"), are bound unto D.O.O. 'VODOVOD I KANALIZACIJA' DANILOVGRAD, CAJA SCEPANOVICA BB, 81410 DANILOVGRAD, SATE OF MONTENEGRO (hereinafter called "the Employer") in the sum of EUR 30.000,00 (EURO THIRTY THOUSAND ONLY) for which payment well and truly to be made to the said Employer, the Bank binds itself, its successors and assigns by these presents.

Signed on behalf of the said Bank this 28/08/2018, (August 28, 2018).

THE CONDITIONS of this obligation are:

(1)If the tenderer withdraws its Tender during the period of tender validity specified by the tenderer in the Tender Form, or

(2)If the tenderer, having been notified of the acceptance of its Tender by the Employer during the period of tender validity:

(a)fails or refuses to sigh the Form of Contract Agreement when required, or

(b)fails or refuses to issue the Performance Security in accordance with the tender documents.

We undertake to pay to the Employer up to the above amount upon receipt of his first written demand.

This guarantee will remain in full force up to and including the date twenty-eight (28) days after the period of tender validity and any demand in respect thereof must reach the Bank not later than the above date, thus no later than 28/02/2019.

Yours Faithfully,

PIRAEUS BANK S.A.
AGIOU GEORGIOU BRANCH, LARISSA (2614)
DATUM: 28. 08. 2018. god.
Za:
D.O.O "VIDOVOD I KANALIZACIJA" DANILOVGRAD
CAJA ŠĆEPANOVIĆA BB
81 410 DANILOVGRAD
CRNA GORA
Garancija br. 917ILG1854141 za iznos od 30.000, 00 (TRIDESET HILJADA EURA ISKLJUČIVO)
Naziv Ugovora: Opštinska infrastruktura Danilovgrada – Izgradanja uređaja za prečišćavanje otpadnih voda
S OBZIROM DA JE, KARKANIAS ENVIRONMENTAL TEHNOLOGY S.A., PIB br. EL095244711, Industriska oblast Larise, Grčka, P.C. 41004, (u daljem tekstu "Ponuđač") predao svoju Ponudu dana 13. 09. 2018. godine (datum ponude) za izvođenje u prethodnom tekstu pomenutog Ugovora (u daljem tekstu "Tender"), sa br. EBRD ME DAN 9000 od dana 15. 06. 2018. godine.
Ovim dokumentom stavlja se na znanje da mi PIRAEUS BANK S.A. AGIOU GEORGIOU BRANCH, LARISSA (2614), 1ST KM OLD NATIONAL ROAD LARISS ATHENS, 41335 LARISSA GREECE, (u daljem tekstu " Banka"), obavezujemo se firmi D.O.O "VIDOVOD I KANALIZACIJA" DANILOVGRAD CAJA ŠĆEPANOVIĆA BB 81 410 DANILOVGRAD CRNA GORA (u daljem tekstu " Poslodavac") za isnos od 30.000, 00 (TRIDESET HILJADA EURA ISKLJUČIVO) u kojem će biti izvršena isplata navedenom Poslodavcu, Banka obavezuje sebe, svoje nasljednike putem ovdje potpisanih lica.
Dokument je potpisan u ime Banke 28. 08. 2018. god. (28. avgust 2018).
USLOVi koji važe za ovu obavezu su sljedeći:
(1) Ukoliko Ponuđač povuče svoju ponudu tokom perioda trajanja ponude koji je naveden od strane Ponuđača u Tenderskom obrascu, ili
(2) Ukoliko Ponuđač, nakon što dobije obavještenje od srane Poslodavca da je njegova ponuda prihvaćena tokom trajanja tendera:
(a) ne potpiše ili odbije da potpiše Obrazac Ugovora kad to bude od njega traženo, ili
(b) ne izda ili odbije da izda Obezbjeđenje radova u skladu sa tenderskom dokumentacijom.
Obavezujemo se da Poslodavcu isplatimo sumu do iznosa navedenog u prethodnom tekstu nakon prijema njegovog prvog pisanog zahtjeva.
Ova garancija je na snazi do dvadeset osam (28) dana, uključujući i dvadeset osmi dan, nakon isteka valjanosti tenderske ponude i svaki zahtjev koji se odnosi na pomenutu ponudu Banka mora primiti najkasnije do prethodno pomenutog datuma, što znači do 28. 02. 2019. godine.

Srdačan pozdrav.
PIRAEUS BANK S.A.

MEMORANDUM OF CLARIFICATION MEETING
CHANGES REQUIRED PURSUANT TO FIRST STAGE PROPOSAL EVALUATION

KARKANIAS ENVIRONMENTAL TECHNOLOGY S.A.

Procurement of Construction of Wastewater Plant for D.O.O. "Vodovod i kanalizacija" Danilovgrad, State of Montenegro, 8732-IFT-41252

These Changes Required Pursuant to First Stage Proposal Evaluation are issued in accordance with Para 20.1 of the Instruction to Tenderers of the Tender Documents for the above Contract.

The tenderer is expected to carefully examine the "Changes Required Pursuant to First Stage Proposal Evaluation".

Failure to furnish all information, change, correct or withdraw all the non-conformities identified by the Purchaser in the First Stage Proposal and listed in these "Changes Required Pursuant to First Stage Proposal Evaluation" will be at the tenderer's risk and will result in the rejection of its tender.

1. GENERAL INFORMATION

1.1 Basic information on the construction

The purpose of the "Danilovgrad Municipal Infrastructure Project, Construction of WWTP" project is to deal with the treatment of sewage through the construction of a new wastewater treatment plant.

This project is to be followed by the "Danilovgrad Municipal Infrastructure Project, Rehabilitation of sewerage" project dealing with the collection of sewage wastewaters in the town of Danilovgrad through the construction of a separate sanitary sewerage.

The main watercourse draining the Danilovgrad area is the Zeta river.

The implementation of the projects will ensure an improved water quality in the Zeta river into which wastewaters are drained at present without any adequate treatment process. The wastewater will be brought into the new WWTP. The projects concept is based on the intention to protect the watercourse maximally from being polluted.

The designed activity realization will form conditions for the infrastructure completion and will promote the development of the area concerned.

1. OPŠTE INFORMACIJE

1.1 Osnovne informacije o izgradnji

Namjera projekta "Opštinska infrastruktura Danilovgrada, izgradnja postrojenja za prečišćavanje otpadnih voda (PPOV)" je rješavanje problema kanalizacije kroz izgradnju postrojenja za prečišćavanje otpadnih voda.

Ovaj projekat treba da prati projekat "Opštinska infrastruktura Danilovgrada, Rehabilitacija kanalizacije" koji se odnosi na sakupljanje kanalizacionih otpadnih voda u gradu Danilovgradu kroz izgradnju odvojene sanitarne kanalizacije.

Glavni vodotok koji odvodi vode sa područja Danilovgrada je rijeka Zeta.

3/12/18

GEORGIOS KARKANIAS
PRESIDENT

Realizacija projekata obezbijediće poboljšani kvalitet vode u rijeci Zeti, u koju se trenutno odvode otpadne vode bez adekvatnog postupka obrade. Otpadna voda će biti dovedena u novi PPOV. Koncept projekata je zasnovan na namjeri da se vodotok maksimalno zaštiti od zagađenja.

Realizacija projektovane aktivnosti će uspostaviti uslove za završetak infrastrukture i promovisati razvoj dotične oblasti.

1.2 Proposed scope of works and expected results

The Contractor elaborates the documentation of the WWTP for the capacity of 12,000 PE with construction divided into two stages, and will realize the WWTP for the capacity of 6,000 PE with individual structures realized in a scope specified in relevant descriptions of these structures.

1.2 Predloženi obim radova i očekivani rezultati

Izvođač radova izrađuje dokumentaciju o PPOV-u za kapacitet od 12.000 PE sa izgradnjom podijeljenom u dvije faze i realizovaće PPOV za kapacitet od 6.000 PE sa pojedinačnim strukturama realizovanim u opsegu navedenim u relevantnim opisima ovih objekata.

1.2.1 Wastewater Production

The existing sewerage system will be partially replaced by sewers built as separate sewage system. Wastewater treatment plant is proposed for following capacity:

Stage 1 - design capacity	6 000 population equivalent
Stage 2 - distant future	12 000 population equivalent

A vast majority of the wastewater collected from Danilovgrad is formed by sewage water, produced mainly in households.

1.2.1 Proizvodnja otpadnih voda

Postojeći kanalizacioni sistem će biti djelimično zamijenjen kanalizacijom izgrađenom kao zasebni kanalizacioni sistem. Postrojenje za prečišćavanje otpadnih voda se predlaže za sljedeće kapacitete:

Faza 1 – projektovani kapacitet	6 000 ekvivalent stanovništva
Faza 2 - daleku budućnost	12 000 ekvivalent stanovništva

Ogromnu većinu otpadnih voda prikupljenih iz Danilovgrada čini kanalizacijona voda koja se uglavnom proizvodi u domaćinstvima.

3/12/18
GEORGIOS KARKANIAS
PRESIDENT

1.2.1.1 Wastewater Volume

The determination of the volume of wastewater is based on the expected wastewater production of 150 L/capita.day. The wastewater flow rates, specified by the client, include groundwater inflow/infiltration. Design parameters is found in the following table:

1.2.1.1 Zapremina otpadnih voda

Određivanje količine otpadnih voda zasnovano je na očekivanoj proizvodnji otpadnih voda od 150 L / po glavi stanovnika na dan. Stopa protoka otpadnih voda, koju odredi klijent, uključuje priliv / infiltraciju podzemnih voda. Parametri projekta nalaze se u sledećoj tabeli:

Table 1: Wastewater Production

Tabela 1: Proizvodnja otpadnih voda

	Design capacity Projektovani kapacitet		
	l/s	m^3/h	m^3/d
Average Dry Weather Daily Flow – ADF Prosječni dnevni protok tokom suvog vremena – ADF	10.4	37.4	898.6
Maximum Dry Weather Daily Flow – MDF Maksimalni dnevni protok tokom suvog vremena – MDF	14.6	52.6	1,261.4
Maximum Dry Weather Hourly Flow – MHF Maksimalni protok po satu tokom suvog vremena – MHF	21.9	78.8	-
Wet Weather Flow – WWF Protok tokom vlažnog vremena – WWF	26.3	94.6	-

All the design flow will be doubled for WWTP capacity of 12,000 PE.

Internal recycles will be less than 1% of WWF.

Svi projektovani protoci biće udvostručeni za kapacitet PPOV-a od 12.000 PE.

Unutrašnje recikliraže biće manje od 1% protoka otpadnih voda.

3/12/18

GEORGIOS KARKANIAS
PRESIDENT

1.2.1.2 Raw Wastewater Quality

The wastewater produced in the town of Danilovgrad has the characteristics of sewage water. The specification of its quality is therefore based on the Specific Contamination (SC), produced by the town's inhabitants, as summarized in Table 2.

1.2.1.2 Kvalitet sirove otpadne vode

Otpadna voda proizvedena u gradu Danilovgradu ima karakteristike kanalizacione vode. Specifikacija njenog kvaliteta stoga se zasniva na specifičnoj kontaminaciji (SC), koju proizvode stanovnici grada, kako je sažeto u Tabeli 2.

Table 2: Specific pollution per capita

Tabela 2: Specifično zagađenje po glavi stanovnika

BOD_5	60	g/capita.day
COD	120	g/capita.day
SS	70	g/capita.day
TNK	11	g/capita.day
P	1.8	g/capita.day

Table 3: Design capacity - average annual value

Tabela 3: Projektovani kapacitet – prosječna godišnja vrijednost

BOD_5	360	kg/day	400.6	mg/l
COD	720	kg/day	801.3	mg/l
SS	420	kg/day	467.4	mg/l
TNK	66	kg/day	73.5	mg/l
P	10.8	kg/day	12.0	mg/l

All the design balance of pollution will be doubled for WWTP capacity of 12,000 PE.

At the time of startup of WWTP will be connected pollution from about 3,900 inhabitants. The amount of pollution and wastewater flow will be as follows (the amount of storm water flow is not changed).

Čitav projektni bilans zagađenja će se udvostručiti za kapacitet PPOV-a od 12.000 PE.

3/12/18
GEORGIOS KARKANIAS
PRESIDENT

U trenutku pokretanja prečišćenja otpadnih voda biće prikupljeno zagađenje od oko 3.900 stanovnika. Količina zagađenja i protoka otpadnih voda će biti sljedeća (količina protoka pribrežne vode se ne mijenja).

Table 4: Wastewater production- state at start up

Tabela 4: Proizvodnja otpadne vode – stanje na početku

	l/s	m^3/h	m^3/d
Average Dry Weather Daily Flow – ADF Prosječni dnevni protok tokom suvog vremena – ADF	6.8	24.3	584.1
Maximum Dry Weather Daily Flow – MDF Maksimalni dnevni protok tokom suvog vremena – MDF	9.5	34.2	819.9
Maximum Dry Weather Hourly Flow – MHF Maksimalni protok po satu tokom suvog vremena	14.2	51.2	-
Wet Weather Flow – WWF Protok tokom vlažnog vremena WWF	26.3	94.6	-

Expected minimum flow of waste water during startup will be about 4.1 l/s.

Očekivani minimalni protok otpadnih voda tokom startovanja će biti oko 4,1 l/s.

Table 5: Raw wastewater pollution - state at start up

Tabela 5: Zagađenje sirove otpadne vode – stanje na početku

BOD_5	234	kg/day	400.6	mg/l
COD	468	kg/day	801.3	mg/l

TNK	42.9	kg/day	73.5	mg/l
P	7.02	kg/day	12.0	mg/l

1.2.1.3 Treated Wastewater Quality

River Zeta is recipient of treated wastewater. The river is located in sensitive area. Wastewater treatment process includes nutrient removal therefore. According the Law on Classification and Categoration of Surface and Ground water of Montenegro (in force since 1996) river Zeta water is classified along whole watercourse to the classes A1, S. I. Class A1 water can be used in its' natural state after disinfection for

3/12/18
GEORGIOS KARKANIAS
PRESIDENT

drinking purposes. Class S water can be used for fish breeding and class I designate water suitable for contact recreation (bathing). In line with EU Directives secondary and tertiary treatment at WWTP Danilovgrad will achieve the following effluent quality:

1.2.1.3 Kvalitet prečišćene otpadne vode

Rijeka Zeta je recipijent prečišćenih otpadnih voda. Rijeka se nalazi na osjetljivom području. Proces prečišćavanja otpadnih voda uključuje uklanjanje nutrijenata. Prema Zakonu o klasifikaciji i kategorizaciji površinskih i podzemnih voda Crne Gore (koji je na snazi od 1996. godine) rijeka Zeta se klasifikuje po cjelokupnom vodotoku na klase A1. S. I. Voda klase A1 se može koristiti za piće u svom prirodnom stanju nakon dezinfekcije. Voda klase S može se koristiti za uzgoj riba a klasa I označava vodu pogodnu za rekreaciju (kupanje). U skladu sa direktivama EU sekundarni i tercijarni tretman na PPOV-u Danilovgrad će postići sljedeći kvalitet otpadnih voda:

Table 6: Effluent quality requirements

Tabela 6: Zahtjevi u pogledu kvalitet efluenta

Parameter		
BOD_5	25	mg/l
COD	125	mg/l
SS	35	mg/l
Total Nitrogen (annual average value) Ukupna količina azota (prosječna godišnja vrijednost)	15	mg/l
Total Phosphorous (annual average value) Ukupna količna fosfora (prosječna godišnja vrijednost)	2	mg/l

UV disinfection of effluent is required in order to ensure the quality of receiving water (Zeta River) as a drinking water class A1.

UV dezinfekcija efluenta je neophodna kako bi se osigurao kvalitet prijema vode (rijeka Zeta) kao klasa A1 vode za piće.

3/12/18
GEORGIOS KARKANIAS
PRESIDENT

2. DETAILS OF ALL WORKS TO ACHIEVE COMPLETION

2.1 Technological part

The Works will comprise designing, construction and commissioning of the WWTP Danilovgrad, tertiary treatment and sludge management. The WWTP Danilovgrad is designed for a capacity of 12000 PE and shall be built for 6,000PE in the Stage 1.

The design of the WWTP spatial arrangement had taken into consideration the territorial (areal) reserve for the future extension of the WWTP for the capacity of 18,000 PE (Stage 3).

The WWTP is designed as unattended with fully automatic operation.

List of buildings and facilities - for the design and erection of all necessary works

- Connection on the inlet main collector for the capacity of 130 l/s on the site of the WWTP
- Facility for the coarse screen for the capacity of 130 l/s,
- Facility for the inlet pumping station for the capacity of min26,3 l/s,
- Facility for the fine screen, grease and grit chamber (compact mechanical pretreatment unit) for the capacity of min26,3 l/s,
- Connection between the compact mechanical pretreatment unit and the biological unit for capacity of min26,3 l/s,
- Biological unit for the capacity of 6,000 PE,
- Discharge pipeline from the secondary settling tank to the filtration unit for the capacity of min26,3 l/s
- Shaft and facility for the service water preparation
- Filtration of treated wastewater
- Disinfection of treated wastewater
- Effluent measuring channel for the quality of treated wastewater and capacity of min26,3 l/s
- Return sludge and Excess sludge pumping station for 6,000 PE,
- Facility for sludge thickening for 6,000 PE,
- Sludge storage (holding) tank for 6,000 PE,
- Facility for sludge dewatering for 6,000 PE,
- Facility for septic sludge (septage) delivered by trucks, receiving tank
- Administration building with laboratory, workshop and garage,
- Internal sewage system with sewage and internal recycles from sludge treatment,

3/12/18
GEORGIOS KARKANIAS
PRESIDENT

- Rainwater will be introduced into the drainage
- Transformer station for the WWTP capacity 12,000 PE,
- Power generator for 6,000 PE.

- Landscaping works
- Access road
- Construction related to utilities connections (electric power and water supply and others).
- Trial operation of the WWTP in duration of 365 days.
- Sludge disposal in the Trial operation period will be done by Employer.
- Obtainment of an Operation permit including all the required consents and documentation (such as: expert report on explosion safety, summary of fire safety procedures, production of project of maintenance of facility).
- Training of the WWTP staff.

The scope of Works also covers delivery of Plant, test on Completion including operational trials, Tests after Completion, remedying of any defects in the Works and training of future (Employer's) End Recipient's WWTP staff. All activities necessary to be performed in order to put the Works into normal operation and to deliver them to the Employer shall also be carried out. The Conditions of Contract, Price Schedule, such as included in this Tender Dossier, shall be read in conjunction with the Employer's requirements. Matters referred to, shown or described in any of the formers are not necessarily repeated in the latter.

2. DETALJI SVIH RADOVA KOJI SU POTREBNI ZA ZAVRŠETAK

2.1 Tehnološki dio

Radovi će obuhvatati projektovanje, izgradnju i puštanje u rad PPOV-a Danilovgrad, tercijarni tretman i upravljanje muljem. PPOV Danilovgrad je projektovan za kapacitet od 12000 PE i biće izgrađen za 6.000PE u Fazi 1.

Projekat prostornog uređenja PPOV-a uzeo je u obzir teritorijalnu (prostornu) rezervu za buduće proširenje PPOV-a za kapacitet od 18.000 PE (faza 3).

PPOV je projektovan kao postrojenje bez nadzora sa potpuno automatskim radom.

Spisak zgrada i objekata - za projektovanje i montažu svih potrebnih radova.

3/12/18
GEORGIOS KARKANIAS
PRESIDENT

- Priključak za ulaz glavnog kolektora za kapacitet od 130 l / s na lokaciji PPOV-a
- Postrojenje za grubo prosijavanje za kapacitet od 130 l / s,
- Postrojenje za ulaz pumpne stanice za kapacitet od 26,3 l / s,
- Postrojenje za fino prosijavanje, mast i komora za pjeskarenje (kompaktni uređaj za mehanički predtretman) za kapacitet min26,3 l / s,
- Spoj između kompaktnog uređaja za mehanički predtretman i biološki uređaj za kapacitet min 26,3 l / s,
- Biološki uređaj za kapacitet 6000 PE,
- Ispusna cijev iz sekundarnog bazena za taloženje do uređaja za filtraciju za kapacitet min 26,3 l / s
- Okno i postrojenje za pripremu servisne vode
- Filtriranje prečišćenje otpadne vode
- Dezinfekcija prečišćenih otpadnih voda
- Mjerni kanal izlaznih voda (efluenta) za kvalitet prečišćenih otpadnih voda i kapacitet od min 26,3 l / s
- Pumpna stanica za povratni mulj i višak mulja za 6.000 PE
- Postrojenje za ugušćivanje mulja za 6.000 PE,
- Bazen za odlaganje mulja za 6.000 PE,
- Postrojenje za dehidatraciju mulja za 6.000 PE
- Postrojenje za septički mulj (septik) dopremljen kamionima, prijemni bazen
- Upravna zgrada sa laboratorijom, radionicom i garažom,
- Interni kanalizacijski sistem sa kanalizacijom i unutrašnjim recikliranjem tretiranog mulja,
- Kišnica će ući u sistem za odvodnjavanje
- Trafostanica za PPOV kapaciteta 12.000 PE,
- Agregat za 6.000 PE.

3/12/18

GEORGIOS KARKANIAS
PRESIDENT

- Radovi na ozelenjavanju
- Pristupni put
- Konstrukcija koja se odnosi na komunalne priključke (snabdijevanje električnom energijom i vodom i ostalo).
- Probni rad PPOV-a u trajanju od 365 dana.
- Odlaganje mulja u periodu probnog rada izvršiće Investitor.
- Pribavljanje operativne dozvole uključujući sve neophodne saglasnosti i dokumentaciju (kao što su: izveštaj eksperta o bezbjednosti od eksplozije, pregled procedura zaštite od požara, izrada projekta o održavanju objekta).
- Obuka osoblja PPOV-a.

Obim radova obuhvata i isporuku postrojenja, testiranje pri završetku, uključujući operativna ispitivanja, testove nakon završetka, otklanjanje bilo kakvih nedostataka u radovima i obuku budućeg Investitorovog osoblja i osoblja PPOV-a. Takođe, obavljaju se sve aktivnosti koje su neophodne da bi se obezbijedilo normalno funkcionisanje i radovi predali Investitoru. Uslovi ugovora, cjenovnik, kao što je uključeno u ovaj Tenderski dosije, treba da se pročitaju zajedno sa zahtjevima Investitora. Pomenuta pitanja, prikazana ili opisana u bilo kom od prethodnih nije neophodno ponavljati.

2.1.1 Wastewater Treatment Process

The design of the wastewater treatment plant for the town of Danilovgrad is based on the nitrification and denitrification treatment processes with chemical precipitation of phosphorus. Wastewater treatment technology is designed as circulating activated sludge process with pre-denitrification tank.

2.1.1 Proces pročišćavanja otpadnih voda

Projekat postrojenja za prečišćavanje otpadnih voda za grad Danilovgrad zasniva se na postupcima prečišćavanja nitrifikacijom i denitrifikacijom pomoću hemijske fosforne percipitacije. Tehnologija prečišćavanja otpadnih voda je projektovana kao cirkulacioni proces aktivnog mulja sa bazenom za denitrifikaciju.

3/12/18
GEORGIOS KARKANIAS
PRESIDENT

2.1.1.1 Structures on the sewer network

The hydraulic sewer capacity is about 130 l/s. The sewerage network contains the following constructions:

- connecting shaft with gravel traps and sewage overflow (inlet and overflow manhole)
- septage unit
- automatically cleaned coarse screen, sewage pumping station and sewage overflow

Gravel traps and coarse screen serve as mechanical protection of pumping station. Their hydraulic capacity is maximal sewer flow capacity. Storm water flow rate greater than 26.3 l/s overflowed from the overflow chamber into the river. Flow rate of 26.3 l/s is a maximal hydraulic capacity of WWTP.

2.1.1.1 Strukture na kanalizacionoj mreži

Kapacitet hidrauličke kanalizacije je oko 130 l / s. Kanalizaciona mreža sadrži sljedeće konstrukcije:

- priključnu šahtu sa šljunkolovom i prelivnom kanalizacijom (ulivna i prelivna šahta)
- septik
- automatski očišćeno grubo sito, kanalizaciona pumpna stanica i prelivna kanalizacija

Šljunkolov i grubo sito služe kao mehanička zaštita pumpne stanice. Njihov hidraulički kapacitet je maksimalan kapacitet protoka kanalizacije. Protok pribrežne vode veći od 26,3 l / s preliva se iz prelivne komore u rijeku. Protok od 26,3 l / s je maksimalni hidraulični kapacitet PPOV-a.

Connection to the main collector

Connection sewer system and wastewater treatment plant will be using connecting shafts. Trunk sewer ends in the object of overflow/relief and switching-off chambers in front of the wastewater treatment plant.

This object fulfills two basic functions:

- Control of inflowing quantity of wastewater for the value Qmax = 130 l/s. In the gate chamber a motorized penstock is fitted destined for controlling inflowing quantity of wastewater.
- This motorized penstock warrants inflow controlling and/or full closing the wastewater treatment plant inlet (in case of a heavy failure – e.g. electric power drop-out).

As for spatial arrangement of the inlet / overflow manhole this one is divided into four parts – to the inlet chamber, to the gravel traps chamber, to the overflow/relief chamber and to the penstock/closing chamber. Gravel traps is mechanical protection of equipment against rough substances heavier than water. Gravel and other rough impurities flowing in together with influent wastewater will be trapped there. Extraction of

3/12/18
GEORGIOS KARKANIAS
PRESIDENT

trapped material will be realized with the aid of a lifting device. Hydraulic capacity of gravel traps is 130 l/s. Overflow/relief chamber has been resolved as an overflow/relief chamber with a front over fall. Penstock/closing chamber is provided with a motorized penstock for controlling inflowing quantity of wastewater. Overflow wastewater is introduced by sewerage systems into the river. This system also creates a bypass sewer of WWTP.

The structure includes a scum diaphragm, in conjunction with overflow weir, to prevent coarse impurities, floating substances, oil substances and fats from entering the river.

Furthermore, it is foreseen an automatic station for receiving samples of untreated wastewater.

The structure includes a draining area of the containers. The container removal is carried out with a truck.

One flow measuring structure is designed to be installed. One measuring flume will be installed on the storm-water overflow behind the overflow chamber. Parshall measuring flume is used due to their reliability and a wide range of flow rate.

The structure is designed as an open, reinforced-concrete flume made of water-resistance concrete, in which the measuring profile will be installed.

Priključak na glavni kolektor

Za priključni kanalizacioni sistem i postrojenje za prečišćavanje otpadnih voda će se koristiti priključne šahte. Glavni kanal se završava u objektu prelivne/ispusne i prekidne komore ispred postrojenja za prečišćavanje otpadnih voda.

Ovaj objekat ispunjava dvije osnovne funkcije:

- Kontrola količine otpadne vode koja se uliva za vrijednost Qmax = 130 l / s. U zatvaračkoj komori je ugrađena motorizovana cijev za regulisanje protoka namijenjena kontroli količine otpadne vode koja se uliva.
- Ova motorizovana cijev garantuje kontrolu priliva i / ili potpuno zatvaranje ulaza postrojenja za prečišćavanje otpadnih voda (u slučaju velikog kvara- npr. nestanka električne energije).

Prostor za ulivnu / prelivnu šahtu, podijeljen je na četiri dijela - na ulaznu komoru, komoru za šljunkolov, prelivnu / ispusnu komoru i komoru za pritisak/zatvarajuću komoru. Šljunkolov je mehanička zaštita opreme od teških supstanci krupnijih od vode. Šljunak i druge grube čestice koje se ulivaju zajedno sa ulaznom otpadnim vodama biće tamo zadržane. Vađenje zadržanog materijala biće realizovano uz pomoć uređaja za

3/12/18
GEORGIOS KARKANIAS
PRESIDENT

podizanje. Hidraulični kapacitet šljunkolova je 130 l/s. Prelivna/ispusna komora je realizovana kao prelivna/ispusna komora sa prednjim padom. Komora za pritisak/zatvarajuća komora je opremljena sa motorizovanom cijevi za kontrolisanje količine protoka otpadne vode koja se uliva. Prečišćavanje otpadnih voda uvode kanalizacioni sistemi u rijeku. Ovaj sistem takođe stvara obilazni cjevovod PPOV-a.
Struktura obuhvata dijafragmu za skupljanje mulja, u kombinaciji sa prelivnim pregradom, kako bi se spriječilo ulazak grubih nečistoća, plutajuće materije, uljnih supstanci i masti u rijeku.
Pored toga, predviđena je automatska stanica za prijem uzoraka neprečišćene otpadne vode. Struktura uključuje oblast za odvodnjavanje spremnika. Uklanjanje spremnika vrši se kamionom.
Jedna mjerna struktura protoka je projektovana da bude instalirana. Jedan mjerni kanal će biti instaliran na prelivu prebrižne vode iza prelivne komore. Paršalov mjerni kanal se koristi zbog pouzdanosti i širokog opsega brzine protoka. Struktura je projektovana kao otvoreni armirani betonski kanal, od vodootpornog betona, u kojem će biti postavljen mjerni profil.

Receipt of content of cesspools and septic tanks

The structure serves for collecting septage from septic trucks collected from cesspools and septic tanks.

Analytically, inside the facility will be installed a gravel trap, a compact fine screen unit for septage receiving and a septic reception tank. The structure includes a water-resistant, covered reception (collection) tank of required capacity. The tank is filled only through an automatic station for receiving septage, appropriately equipped with a electromotor knife gate valve, a flow meter, a pH and temperature measurement probe and a conductivity meter on the inlet pipeline. The tank includes a submersible mixer for homogenizing the content, valve for discharging the tank content by gravity and ultrasonic level meter.

The contents of the septic reception tank are dosed via submersible pumps ahead of coarse screen. Dosage is blocked during storm water flow of wastewater.

Furthermore, it is foreseen an automatic station for receiving samples of septage.

The structure is designed with parameters sufficient also for the planned scope of Stage 2.

The automatic station for receiving septage and the automatic station for receiving samples of septage will be installed into an insulated and heated building.

Prijem sadržaja prihvatnih i septičkih jama

Struktura služi za sakupljanje otpada sa septičkih kamiona prikupljenog iz prihvatnih i septičkih jama.

3/12/18
GEORGIOS KARKANIAS
PRESIDENT

Analitički, u objektu će biti postavljen šljunkolov, kompaktno postrojenje za fino prosijavanje za prijem otpada i septička jama. Struktura obuhvata vodootporni, pokriveni spremnik za prijem (sakupljanje) potrebnog kapaciteta. Spremnik se popunjava samo preko automatske stanice za prijem otpada, odgovarajuće opremljene elektromotornim nožastim zasunskim ventilom, mjeračom protoka, sondom za merenje pH vrijednosti i temperature i uređajem za mjerenje provodljivosti na ulazu cjevovoda. Spremnik sadrži uronjenu mješalicu za homogenizaciju sadržaja, ventil za odvod sadržaja spremnika gravitacionim i ultrazvučnim mjeračem nivoa.

Sadržaj septičkog spremnika za prijem dozira se preko uronjenih pumpi ispred grubog sita. Doziranje se blokira u vrijeme bujice otpadnih voda.
Pored toga, predviđena je stanica za automatski prijem uzoraka otpada.
Struktura je projektovana sa parametrima koji su takođe dovoljni za planirani obim faze 2.

Stanica za automatski prijem otpada i stanica za automatski prijem uzoraka otpada biće postavljene u izolovanoj i zagrijanoj zgradi.

Automatic coarse screen and pumping station

Automatic coarse screen is designed for 100 % storm water flow (130 l/s). Screenings from the automatic cleaned coarse screen fall into the screw conveyor and finally moved into the container. Ultrasonic differential level meter located ahead and behind of automatic screen controls screen operation. There is two lines, one with mechanically operated coarse screen with 50mm gaps and one with a standby manually operated coarse screen with 50mm gaps.

The structure includes a draining area of the container. The container removal is carried out with a truck.

The pumping station capacity and mechanical pre-treatment facility of WWTP is designed according to wastewater production rate.

The pumping station is resolved as a basement object designed for a slight equalizing of the sewage and for the pumping of the sewage through the mechanical pre-treatment into the biological part of the treatment plant. The pumping station will be equipped with submersible pumps. The number and the capacity of pumps are selected in order to achieve a uniform supply to the treatment plant. The pumps will be operated automatically in dependence on the water level in the pumping sump. Level inside of the pumping station is measured with the ultrasonic level meter. All pumps have frequency inverters for flow control. Pumping station maximal hydraulic capacity is 28.56 l/s for 1st stage. Storm water flow over 26.3 l/s overflows into the river from pumping station. On the pressure pipeline an electromagnetic inductive flow meter will be installed.

Pumping station is structurally designed for a wastewater flow corresponding of 12,000 PE flow (2nd stage). However the pumps will be mounted only on the flow rate max 28,56 l/s which correspond to rainfall flow rate of 6,000 PE.

The wastewater pumped shall be distributed to two separate lines for Stage 2.

3/12/18
GEORGIOS KARKANIAS
PRESIDENT

Further, the structure includes a scum diaphragm to prevent coarse impurities, floating substances, oil substances and fats from entering the river.

Internal recycles will be less than 1% of WWF.

Automatsko grubo sito i pumpna stanica

Automatsko grubo sito projektovano je za 100% protoka pribrežne vode (130 l / s). Krupni otpad iz sita sa automatskim čišćenjem upada u pužasti transporter i na kraju se premješta u spremnik. Ultrazvučni diferencijalni mjerač nivoa nalazi se ispred i iza automatskih komandi sita u operaciji prosijavanja. Postoje dvije linije, jedna sa grubim sitom kojim se upravlja mehanički sa razmakom od 50mm i jedna sa grubim sitom kojim se upravlja ručno sa razmakom od 50mm, na stend baju.
Struktura uključuje oblast za odvodnjavanje spremnika. Uklanjanje spremnika vrši se kamionom.

Kapacitet pumpne stanice i mehaničko postrojenje za predtretman PPOV-a projektovani su su prema stepenu proizvodnje otpadnih voda.
Pumpna stanica je realizovana kao podrumski objekat koji je projektovan za blago izjednačavanje kanalizacije i za pumpanje kanalizacije kroz mehanički predtretman u biološki dio postrojenja za prečišćavanje. Pumpna stanica će biti opremljena uronjenim pumpama. Broj i kapacitet pumpi su biraju tako da bi se postiglo jedinstveno snabdijevanje u postrojenju za prečišćavanje. Pumpama će se upravljati automatski u zavisnosti od nivoa vode u pumpi. Nivo unutrašnje pumpe se mjeri pomoću ultrazvučnog mjerača nivoa. Sve pumpe imaju frekventne pretvarače za kontrolu protoka. Maksimalni hidraulični kapacitet pumpe je 28,56 l / s za prvu fazu. Pribrežna voda čiji protok prelazi 26,3 l / s preliva se u rijeku sa pumpne stanice. Na potisnom cjevovodu će se instalirati elektromagnetni induktivni mjerač protoka.

Pumpna stanica je strukturno projektovana za protok otpadnih voda koji odgovara protoku od 12.000 PE (druga faza). Međutim, pumpe će se montirati samo na protok maks. 28,56 l / s, što odgovara opsegu brzine protoka kišnice od 6.000 PE.

Ispumpana otpadna voda će se distribuirati na dvije odvojene linije za fazu 2.

Pored toga, struktura uključuje dijafragmu za skupljanje mulja kako bi se spriječio ulazak grubih nečistoća, plutajućih materija, uljnih supstanci i masti u rijeku.

Unutrašnje recikliraže biće manje od 1% protoka otpadnih voda.

GEORGIOS KARKANIAS
PRESIDENT

2.1.1.2 Mechanical wastewater pretreatment unit

Complete wastewater pre-treatment prevents operational problems, such as blockages, wear and silting.

A double-line arrangement of the structure is designed; one separate unit is installed within Stage 1 (6,000 PE). Another, identical, unit shall be installed within Stage 2. A compact mechanical pretreatment unit is designed for each line.

Complete compact mechanical pretreatment unit consists of fine screen with screenings treatment, grit separation and classification with aeration and separation and removal of fat and grease. Hydraulic capacity of the compact mechanical pretreatment unit is 30 l/s (maximum design capacity). Slot of screen is 6 mm. The screen will be equipped to press of screenings. Analytically, screenings will be collected and removed, together with fats by a conveyor with an integrated press. The sand trap will achieve the separation of sand from the wastewater. Organic impurities will be washed from trapped sand. The sand will be removed by a conveyor to a separate container. Air will be supplied by an integrated compressor. The unit operation will be fully automatic, with personnel required only for occasional emptying of the container. Trouble-free handling of the container is ensured. The containers removal shall be carried out with a truck.

The structure will include a valve on the bypass piping of compact mechanical pretreatment unit.

The structure is designed as a reinforced-concrete monolithic slab (foundation) made of water-resistant concrete. The hard-surface area for the containers will be made of concrete, drained to the internal sewage system.

2.1.1.2 Mehaničko postrojenje za predtretman otpadnih voda

Kompletan predtretman otpadnih voda sprečava operativne probleme, kao što su blokade, habanje i taloženje mulja.

Projektovan je dvostrani raspored strukture; Jedno odvojeno postrojenje je instalirano u okviru Faze 1 (6.000 PE). Drugo, identično, postrojenje će biti instalirano u okviru faze 2. Kompaktno mehaničko predtretmansko postrojenje je projektovano za svaku liniju.

Kompletno kompaktno mehaničko postrojenje za predtretman sastoji se od pročišćavanja krupnog otpada finim sitima, odvajanja šljunka i klasifikacija sa provjetravanjem i odvajanje i uklanjanje masti i ulja. Hidraulični kapacitet kompaktnog mehaničkog postrojenja za prečišćavanje je 30 l/s (maksimalni projektovani kapacitet). Prorez sita je 6 mm. Sito će biti opremljeno tako da odbija otpad. Analitički, krupni otpad će se sakupljati i ukloniti, zajedno s mastima, putem transportera sa integrisanom presom. Pjeskolov će omogućiti razdvajanje pijeska od otpadne vode. Organske nečistoće će se isprati iz nataloženog pijeska. Pijesak će biti uklonjen transporterom i biće prebačen u poseban bazen. Vazduh će biti snabdijeven integriranim kompresorom. Operacija postrojenja će biti potpuno automatska, a osoblje je potrebno samo za povremeno pražnjenje posude. Obezbijeđeno je lako rukovanje spremnikom bez poteškoća. Uklanjanje bazena će se izvršiti kamionom.

3/12/18
GEORGIOS KARKANIAS
PRESIDENT

Struktura će obuhvatiti ventil na obilazni cjevovod kompaktnog mehaničkog postrojenja za prečišćavanje.

Struktura je konstruisana kao armirana betonska monolitna ploča (temelj) izrađena od vodootpornog betona. Prostor čvrste površine za bazena biće izrađen od betona, dreniran u unutrašnji kanalizacijski sistem.

2.1.1.3 Biological treatment process

Wastewater from mechanical pre-treatment will be flowed into the biological step of WWTP. Wastewater treatment technology is designed as circulating activated sludge process.

This process is based on a biological principle as low-load activation with aerobic sludge stabilization. The activation tanks is divided into a predenitrification (anoxic) zone and circulating activated sludge process with anoxic and aeration zones.

In the predenitrification zone the raw sewage is mixed with recirculated sludge from the bottom of secondary sedimentation tank resulting in the formation of activated mixture. Submersion horizontal agitator is used for stirring the activated sludge in the predenitrification.

Circulated activated sludge tank is equipped with submerged agitators too. The nitrification sections will be aerated by fine-bubble aeration elements. From the nitrification sections the activation mixture flows into the secondary sedimentation tank.

2.1.1.3 Proces biološkog prečišćavanja

Otpadne vode iz mehaničkog predtretmana će biti sprovedene u dio za biološko pročišćavanje u okviru PPOV-a. Tehnologija prečišćavanja otpadnih voda je projektovana kao cirkulacioni proces prečišćenja aktivnog mulja. Ovaj proces se zasniva na biološkom principu aktivacije pod niskim opterećenjem sa aerobičnom stabilizacijom mulja. Aktivacioni bazeni su podijeljeni na zonu denitrifikacije (anoksična zona) i cirkulacioni proces prečišćenja aktivnog mulja sa anoksičnom i aeracijskom zonom.
U zoni denitrifikacije, sirova kanalizacija se miješa sa recirkuliranim muljem sa dna sekundarnog sedimentacionog bazena, što rezultira stvaranjem aktivine smješe. Uronjena horizontalna mješalica se koristi za miješanje aktivnog mulja u denitrifikaciji.

Cirkuacioni bazen za aktivni mulj je takođe opremljen uronjenim mješalicama. Odjeljci za nitrifikaciju će se provjetravati finim vazdušnim mjehurićima. Od nitrifikacionih odjeljaka aktivna mješavina prelazi u sekundarni sedimentacioni bazen.

Flow distribution Chamber I

Structure for equal distribution of wastewater to three separate lines of the biological treatment is designed. The wastewater is distributed by gravity, with overflow including adjustable overflow weir. The structure will include valve. Emergency bypass of the downstream tanks is provided as well.

Komora raspodjele protoka I

Izrađena je struktura za jednaku distribuciju otpadnih voda na tri odvojene linije biološkog pročišćavanja. Otpadna voda se distribuira gravitacijom, sa prelivom uključujući podesivu prelivnu pregradu. Struktura će obuhvatiti ventil. Takođe je obezbijeđena obilaznica nizvodnih bazena u slučaju nužde.

Predenitrification tank

Predenitrification tank ensures denitrification of oxidized forms of nitrogen contained in the return sludge. Two separate, identical denitrification tanks is designed for Stage 2. One tank will be realized within Stage 1.
